Amazing Telephone Breakthrough!

NEW
FOR '81

Cordless Handset Gives You
"Walk & Talk" Convenience
Without Tangling Cords!

The Radio Shack ET-350 is the first complete answer-and-dial telephone with a cordless handset and "full-duplex" operation that lets you use it just like your regular phone. To answer, just pick up the handset and talk; to call, just "dial" from the pushbutton base unit. The big difference is, you're unrestricted by a cord! Because this phone is all-electronic, you get the added benefits of Auto-Redial for one-button redialing of the last number entered if it was busy or didn't answer, and a Universal Dial System for pushbutton convenience even on rotary-dial lines—without extra service charges. There's also a "privacy" button so you never need to cover the mouthpiece with your hand, plus a pleasant tone that replaces the harsh sound of a bell. The base unit may be used on desk or wall. With nickel cadmium batteries and built-in automatic charger U.L. listed for AC operation. FCC approved, of course. Designed, engineered and manufactured in Radio Shack's own factory! Beige color. Ask for Cat. No. 43-266.

- Memory Stores 6 AM and 6 FM Stations for Instant Pushbutton Tuning
- Dolby FM Extends Dynamic Range and Cuts Noise on Dolbyzied Broadcasts

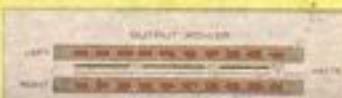

Realistic STA-2200. A breakthrough design—tested and acclaimed by some of the most respected names in hi-fi! Authoritative Radio-Electronics magazine says "The STA-2200 is a joy to use." Here's why: A microprocessor tuner lets you scan up or down the entire FM or AM band, stopping automatically—and perfectly tuned—at each station. You can store six AM and six FM stations in the memory for instant recall. And you can command the receiver to "sample" each memorized station for 5 seconds, then lock in the program of your choice. There is no drift! A 9V battery (not incl.) protects the memory and time setting in case of AC power failure or when you unplug the receiver. Stereo Review summed up its test of the 2200's tuner by saying "it worked to perfection." Now look at all the other features. 11-step bass and treble controls with defeat button for instant comparison with flat response. Selectable bass and treble turnovers (150/300 Hz, 3000/6000 Hz). Complete monitoring and dubbing facilities for 2 tape decks. Overload, thermal and switching transient-protected amplifier, and much more. You can't buy a better receiver without paying hundreds more! U.L. listed. 31-2085 599.95

MOSFET Speed vs. Standard Transistors

MOSFET response

Bipolar response

The STA-2200 uses power MOSFETs—efficient new transistors that operate faster and cooler than conventional bipolar types. MOSFETs improve linearity and slew rate to give you stunningly accurate sound, with distortion reduced to the vanishing point. Shown above is an oscilloscope display comparing the response of MOSFETs with bipolar transistors, both driven with identical 50 kHz pulses. It's a difference you can hear with the STA-2200!

- Separate Detented Bass, Treble and Midrange Controls With Selectable Bass and Treble Turnovers
- Dolby* Decoder Reduces Noise and Extends Dynamic Range on Dolbyized* FM Stereo Broadcasts

Realistic STA-2100D. The solidly built "heavyweight" of our receiver line gives you the power to drive the largest speakers to wall-shaking volume—as well as accuracy that brings out the smallest details in the softest musical passages. The secret is in the amplifier, which is powerful enough to deliver sound with more dynamic range at all volume levels. This increased "headroom" brings you audibly superior reproduction of the sound peaks that give music its depth, impact and "live" quality. To tailor its awesome power to your speakers, acoustics and tastes, the 2100D has three boost-and-cut tone controls. Each has 21 detented "click-stop" positions, and selectable turnovers make the three controls work like five. There's a 40-detent volume control and a pushbutton volume attenuator, so you get two loudness ranges with a total of 80 resettable levels. Hi and low filters reduce non-musical material such as tape hiss, disc noise and turntable rumble. For phono, there's a three-position sensitivity switch for best performance from any standard magnetic cartridge. A second input lets you use two magnetic-cartridge turntables. For recording, a dual tape monitoring and dubbing system provides out-front control of two decks—dub from either deck to the other while listening to a third program source. For FM, there's a Hi-MPX filter for noise-free reception of weaker stereo stations, pushbutton muting for silent tuning, and a sensitive dual-gate MOSFET front end. Also has A/B/Both speaker switching, lighted power output meters with scales for both volume ranges, and extensive circuitry that guards against overdriving, heat build-up and speaker wiring shorts. There's even a circuit that eliminates "pops" and "thumps" when you select inputs. A technological masterpiece! U.L. listed. 31-2090

Realistic STA-2080. If you love music, you'll really appreciate this versatile new receiver. With it, the most demanding parts of your favorite selections remain pure and undistorted at high volume level. You get the "punch" of the original performance, thanks to the huge power reserve of its direct-output amplifier. The FM tuner is equally outstanding. A massive flywheel control, giant lighted dial and dual meters make it easy to tune for lowest distortion. Pushbutton muting silences noise when you tune and the Hi-MPX filter gives you noise-free reception of weak stations. For superior reproduction of discs, there's a preamp with extra-wide dynamic range—with a built-in subsonic filter that eliminates power-robbing turntable rumble and minimizes the effects of warped records. With the "2080" you can listen to—or tape from—two turntables. Complete taping facilities let you record with two decks, copy tapes and lots more, without changing connections. The three boost-and-cut tone controls each have 21 detented positions. A midrange control gives you the "extra" range needed to bring out a hidden vocalist, or adjust the presence of a featured instrument. The pushbutton tone "defeat," along with rear panel main-in/preamp-out jacks, make this receiver a smart choice if you plan to use an equalizer or other signal-processing equipment. There's also a high-filter button that reduces record scratches, tape hiss and other high-frequency noise. For protection, three relays and two circuit breakers guard against overdriving, speaker wiring shorts and overheating, and even eliminate "thumps" when you select inputs. U.L. listed. A solid audio buy. 31-3000 499.95

Realistic TV-20. Brings out the "hidden" bass, treble and dynamic range in TV sound—makes all programs much more enjoyable! 75 and 300-ohm connectors for quick hookup between TV and antenna. Important! TV sound is FM (frequency modulation). FCC regulations require TV transmitters to have the same full 50-15,000 Hz frequency response as FM radio stations. Of course, the sound is monophonic but it is hi-fi. Few TV sets can reproduce hi-fi or even "mid-fi" sound. That's why you need the TV-20.

Optimus® High-Performance "Tower" Speakers

Top of the Line!
Twin 10" Woofers

259⁹⁵
Each

- 6½" Midrange Speaker
- 2" Edgeless Tweeter
With Horn Assembly

Realistic® Optimus T-200. Our best sounding speaker ever, the "200" is skillfully crafted to deliver a flat, uncolored frequency response with high or moderate powered amplifiers. The two active woofers move only half the distance of a single-woofer system, boosting efficiency and lowering distortion and cone breakup. Gradual-slope crossovers improve power handling capacity and ensure smooth transitions in bass-midrange-treble response. Keeping in tune with the latest time-alignment technology, we've staggered the tweeter so there are no sudden phase shifts or discontinuities in the measured phase response. And T-200's look great anywhere in a room because they're finished on 5 sides in genuine oiled walnut veneer.

- Variable High Frequency Control
- 3" High-Compliance Tweeter

Realistic Optimus® T-100. Clean, clear sound from a beautiful speaker! The two active woofers and a tweeter assure balanced response from 55-18,000 Hz. The T-100 is so efficient you'll get the maximum out of any hi-fi amplifier for room-filling volume with minimum wattage. An L-Pad control lets you match the treble response to the acoustics of your listening room and to your personal taste. And like the T-200, the "Tower" has real style—it's finished in oiled walnut veneer on all sides so it looks just great even if not placed against a wall. The input connections are recessed on the bottom of the enclosure so even the speaker cables remain hidden. 40-2025 179.95

All this, plus hand-finished cabinetry of mitre-folded walnut veneer machined from a single panel for continuity of grain and color.

Tweeters for Extended Treble

Dynamic Tweeters. Designed to deliver impressive highs and superior stereo imaging that add greater listening enjoyment to your present system or to custom built systems. Choose from a variety for every application. Figures A through F are dynamic tweeters. 8 ohms impedance.

Piezo Tweeters. Ideal for high performance systems. They use a solid state driver element in place of a voice coil and magnet for lower mass and increased efficiency. This improves transient response so you hear clearer highs with a minimum of "ringing." Piezo tweeters are virtually burnout-proof and do not require a crossover.

Reach Out Farther With Realistic® Mobile AM/SSB CB

Get Help and Information Fast with CB

CB is the ideal travel companion. Volunteers nationwide monitor Channel 9 to assist motorists in need of road service, police or directions around an unfamiliar city. Channel 19 is the Highway Channel, a real aid in finding gas stations with the best prices, who's open, who has road service. Some motels and campgrounds take reservations via CB radio. And CB is always great for conversation to pass the time during long trips. So why travel "alone"?

Single Sideband: More Channels, Power, Range

Many serious CB'ers have switched to single sideband because it's more versatile than regular (AM) CB. SSB offers 80 more channels, more transmit power (12 watts, peak effective) and greater range capability so you can get your message through even in large metropolitan areas where channel congestion is greatest. All Realistic SSB sets are switchable for either 40 upper sidebands, 40 lower sidebands, or the 40 regular AM channels.
