

1

Fold the dark red line in on the triangles out, and the dotted lines in (making the two edges of the red lines meet) to make mini triangles. This should match up to fit into the base from pg. 2 Glue triangle together..

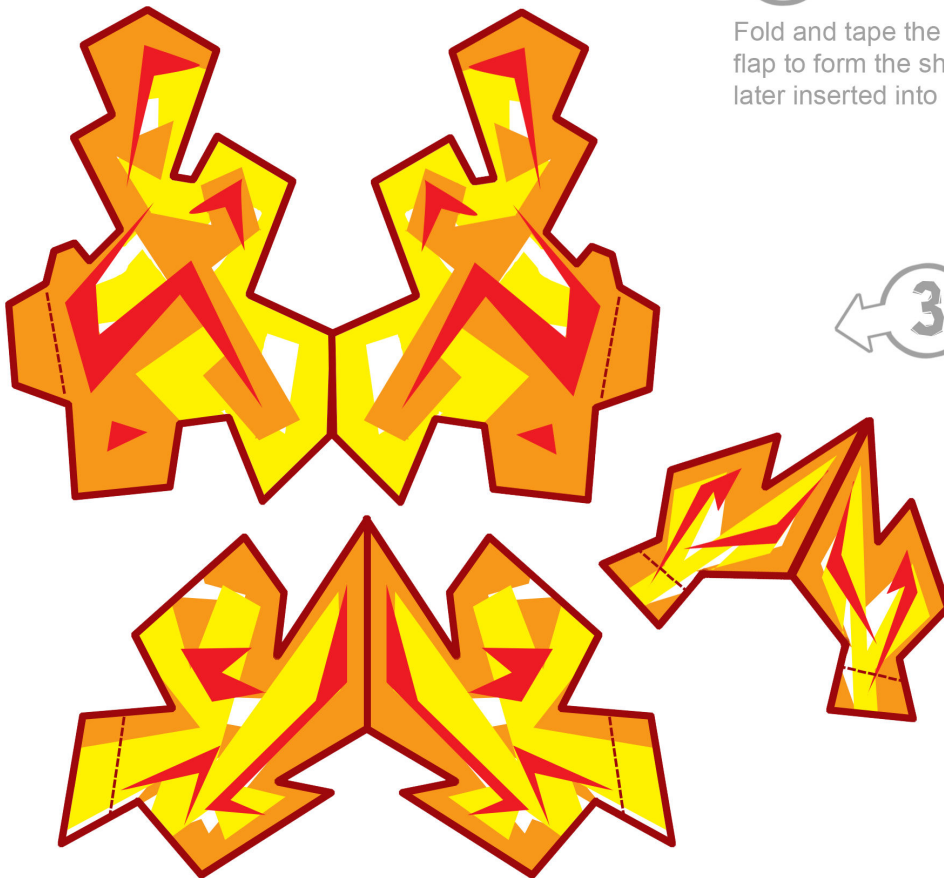

Cut a slit on the points with notches. You will probably need to cut a little on the red lines up to the horizontal dotted line.

Stick through bottom of base from pg. 2, fold out bottom pieces and tape/glue under the base from pg 2.

2

Fold and tape the bottom (unmarked) tabs to the bottom flap to form the ship's cabin. Tabs (a), (b), (c) will be later inserted into the bottom of the ship and secured.

3

Who doesn't love flameage! These flames will go on the back of the ship between the sections of ship. You may need to modify the ship's hull section's tabs to make this happen. Place the flames where you like - that's probably not very helpful... but hopefully fun.
