Hooray! The home stretch. Fold this piece of the ship’s hull onto itself so that it is only 1 piece. Tape the additional tab (a) on the left underside of the hull (on the opposite side of the “X”) where the dotted line is.

Cut through the “X” and the triangle shaped lines near the “X”. Slip the ship’s cabin from page 3 into the triangle slots and tape. It may be easier to slip it through only the first piece of paper and tape instead of trying to get it through both pieces of paper. This may be a pain to do (as is this whole project). Tape the two pieces of paper together so that they are one solid piece.

Tape the tabs of this piece to the main hull with flames. The easiest way is to start from the tip of the ship, and work your way to the back of the ship.

Stick the ship on top of the tower on the base, and enjoy!

(extra flame because who doesn’t like more flames!)

If you made it this far, and have a finished project which you haven’t set on fire or thrown in the trash - congratulations!! There probably are a lot better ways to put this together... if you think of them - let me know at marla@spitefuls.com

Or any other comments, thoughts, etc. I’d love to hear. Hope you had fun with this!

Thanks! Marla
