CHAPTER ONE

ASSEMBLY

	<p>WARNING: Use of non-Midway parts or circuit modifications may cause serious injury or equipment damage! Use only Midway authorized parts.</p> <p>For safety and reliability, don't substitute parts or modify Midway products. Substitute parts or modifications may void EMC directive or FCC type acceptance.</p>
	<p>NOTICE: The term VGM refers to the video game machine.</p>

SAFETY INSTRUCTIONS

The following safety instructions apply to operators and service personnel. Read these instructions before preparing your video game machine (VGM) for play. Other safety instructions appear throughout this manual.

DEFINITIONS OF SAFETY TERMS

DANGER indicates an imminent hazard. If you fail to avoid this hazard, it *will* cause death or serious injury.

WARNING indicates a potential hazard. If you fail to avoid this hazard, it *could* cause death or serious injury.

CAUTION indicates a potential hazard. If you fail to avoid this hazard, it *may* cause minor or moderate injury. CAUTION also alerts you about unsafe practices.

NOTICE indicates information of special importance.

	<p>WARNING: DISCONNECT POWER. Always turn the power <i>off</i> and unplug the VGM before attempting service or adjustments. Installing or repairing PC boards with power on can damage components and void the warranty. Be sure that you securely install ground wires.</p>
	<p>WARNING: GROUNDING. Avoid electrical shocks! Don't plug in a VGM until you have inspected and properly grounded it. Only plug this VGM into a grounded, three-wire outlet. Don't use a "cheater" plug, or cut off the ground pin on the line cord.</p>
	<p>WARNING: SALVAGED PARTS. Kit completion requires salvaging parts from old VGMs. Salvaged parts must operate perfectly. Otherwise, the converted VGM can't perform properly or safely. Before you attempt conversion, repair circuit board malfunctions and cabinet damage.</p>
	<p>WARNING: HANDLE FLUORESCENT TUBE AND CRT WITH CARE. If you drop a fluorescent tube or CRT and it breaks, it will implode! Shattered glass can fly eight feet or more from the implosion.</p>
	<p>WARNING: HAZARD TO EPILEPTICS. A small portion of the population has a condition that may cause epileptic seizures. Affected persons experience seizures while watching some television pictures or playing certain video games. People who have not had seizures may still have an undetected epileptic condition.</p> <p>If anyone in your family has experienced epilepsy symptoms (e.g., seizures or loss of awareness), consult your physician before using video games.</p> <p>While children play video games, a parent should observe. Be alert to the following symptoms: Dizziness, altered vision, eye or muscle twitching, involuntary movements, loss of awareness, disorientation, or convulsions. If you or your child experience these symptoms, <i>discontinue use immediately</i> and consult your physician.</p>

	<p>CAUTION: HANDLING ELECTRONIC DEVICES. This kit's electronic components are <i>sensitive to static electricity</i>. Before handling electronics, observe the following precautions...</p> <ul style="list-style-type: none"> • Before servicing electronics, turn off AC power to the VGM. • Before handling electronics, discharge static electricity on your body. Touch the power supply's safety ground stud before touching electronics. • Store electronic assemblies in an anti-static area. Use an anti-static bag to store the CPU board assembly. After you install the new unit, reuse the same bag to protect the old CPU board. • Don't remove or connect electronics when cabinet power is on. Otherwise, you'll damage VGM electronics and void your warranty.
	<p>CAUTION: USE PROPER FUSE. Avoid electrical shock! Replacement fuses must be of the same type as those they replace. Fuse voltage and current ratings must match ratings on the original fuse.</p>
	<p>CAUTION: WIRING. This kit uses as much of the existing wiring as possible. Avoid improper operation! After you complete the conversion, but before applying power, check the wiring. Verify that the wiring matches the diagrams.</p>
	<p>CAUTION: TAKE CARE WHEN SHIPPING HARD DISKS. The hard disk drive must be packed in an anti-static bag. When shipping the drive for repair or replacement, pack it in an approved container (P/N 08-8068). Never stack or drop hard disk drives.</p>
	<p>NOTICE: POWER SUPPLY. Be sure that your old VGM's power supply can produce these voltages and currents: +5VDC at 6A, -5VDC at 1A and +12VDC at 4A. Meter these operating voltages before you disconnect the old electronics from the VGM. Power supply voltages must measure within +/-5% under load. Your power supply must be FCC approved.</p>
	<p>NOTICE: MONITOR TYPE. This kit isn't compatible with X-Y monitors. Suitable monitors have horizontally mounted CRTs and raster electronics. Only use a monitor with inputs for RGB video and composite, positive or negative sync.</p>
	<p>NOTICE: COIN MECHANISMS. Clean your VGM's coin mechanisms. Also test coin mechanisms with appropriate currency. Servicing these mechanisms is crucial to your VGM's earning potential.</p>
	<p>NOTICE: COIN METERS. This kit doesn't include coin meters. For your convenience, the factory provides meter wiring information. You may use salvaged meters if they operate satisfactorily.</p>
	<p>NOTICE: 2-PLAYER CONTROL PANELS. You can use this kit to convert VGMs with 2-player control panels. A DIP-switch setting allows two-player operation. See DIP SWITCH TESTS in chapters 3 and 4.</p>

CONVERTING A TYPICAL VIDEO GAME CABINET

PREPARE THE CABINET

- [] 1. Verify operation of the old VGM before making changes to the cabinet. Pay special attention to components that you will reuse. (Power supply, video monitor, currency acceptors, wiring harnesses, cabinet locks, lighted marquee, etc.)
- [] 2. Switch off power to the VGM. Disconnect the line cord from the AC power. Clear the work area. Cover or protect non-wood items. (Marquee, monitor, coin door, brackets, line cord, etc.)
- [] 3. Remove old decals and artwork from the cabinet sides. Clean off glue residue. Fill gouges, unused holes, etc. with quick-hardening wood putty. Sand smooth and remove dust.
- [] 4. Evenly cover the entire cabinet with black paint. Allow the paint to dry completely before continuing.
- [] 5. Pencil a line roughly at the top of the previous graphic. Lightly moisten the cabinet with soapy water. Remove the backing and apply the decal. Start at the top and work down. Working outward from the center of the decal, smooth down the decal. Take care to squeeze out air bubbles. If you can't remove a bubble, pop it with a knife or pin. Allow at least 12 hours for the adhesive in the decal to set.

- [] 6. Remove the backlit marquee artwork from the old marquee on the VGM cabinet. Check the fluorescent tube. If you find cracks or darkened ends, replace the tube. Clean the inside of the marquee. Use the old marquee artwork as a guide, and trim the new artwork to size. Deburr the

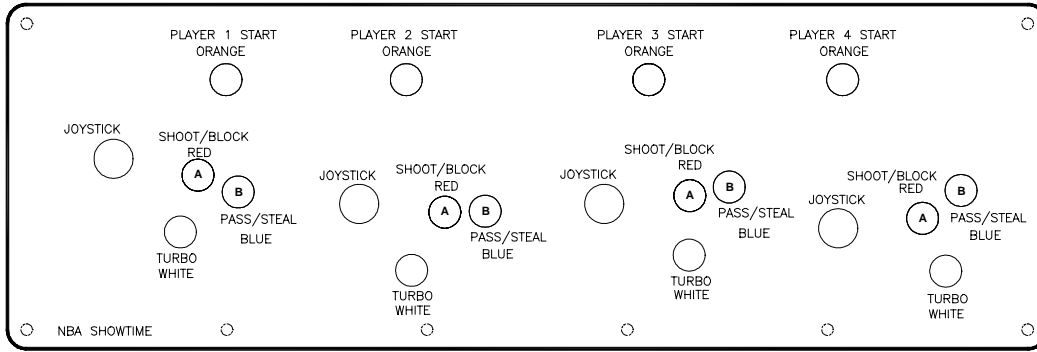

edges of the new marquee artwork. Crease the new artwork as necessary to match the shape of the old artwork. Clean the new marquee artwork and the marquee glass. Install the new artwork on the VGM.

- [] 7. Remove the viewing glass and set it in a safe place. Clean the CRT and monitor bezel. Locate the player moves and game-play instruction decals. Apply them to the top and bottom-front of the monitor bezel. Find the epilepsy warning label. Place this label on the top-front of the monitor bezel. Be sure that decals and labels don't obstruct the viewing area *Don't reinstall the viewing glass yet.*
- [] 8. Remove and save the screws at the top and sides of the rear door. Unlock the rear door, and then lift it off of the cabinet and set it aside. Cover the VGM electronics. Use a vacuum cleaner to remove dirt or debris from inside the cabinet.
- [] 9. Compare your player control panel to the player panel template. If the player panel and template match, then skip to the next step. Otherwise, proceed with the rest of this step. Locate the player panel latches or fasteners. Free the player panel from its operating position. Separate the control panel's earth ground (green) wiring from other control panel wiring. Cut cable ties as necessary to achieve this separation. Leave the earth ground (green) wiring in place. Disconnect and remove the remaining old wiring from the CPU Board and player controls. Remove the player panel and housing from the VGM cabinet. Save the mounting brackets and hardware for reinstallation later.
- [] 10. Some cabinets have speakers on the player panel or other removable pieces of the cabinet. If you must disconnect speaker harnesses, mark the polarity and functions of the wires. Incorrectly phased speakers can cause weak low frequencies or a thin, hollow sound quality.

	<p>NOTICE: FCC COMPLIANCE. Installation of this kit into any existing product does not guarantee compliance with FCC requirements. You are solely responsible for FCC compliance for installations in other products. You must remove any existing FCC compliance label. Don't install a new label on the converted product until you have verified FCC compliance.</p>
---	--

- [] 11. Unfold the cardboard marquee header from your kit. Make sure that the triangular brace supports the middle of the marquee.
- [] 12. Install the marquee header on top of the marquee. You must supply the four wood screws necessary for fastening down the marquee.

	<p>NOTICE: This isn't an actual-size drawing. Use the template to help you position and drill mounting holes. Don't attempt to substitute this drawing for the template.</p>
---	---

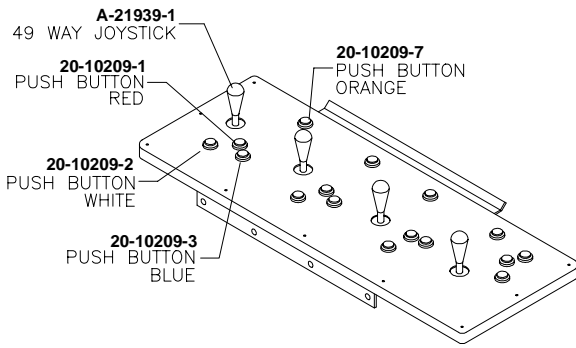

PLAYER PANEL TEMPLATE 16-10830

- [] 1. If you're assembling both kit 15909 and optional player panel 45494, skip to Step 19. If you're assembling just kit 15909, proceed with the next step.
- [] 2. Locate and unfold the player panel template. Temporarily stack newspapers, books, magazines, etc., on the template. The weight will flatten the template sufficiently for use.
- [] 3. If necessary, remove buttons, joysticks and T-nuts from the old player panel and cabinet front. Remove the panel covering and artwork from the previous game. Remove and save hinges or mounting brackets.
- [] 4. If necessary, fill the old player panel holes with wood, putty, glue, etc. Allow adequate time for materials to dry. Sand or file the player panel to a flat surface on both sides.

- [] 5. Place the player panel face down on top of the clear plastic cover. Center the player panel. Mark the outside shape of the panel on the cover. Also mark hole locations. Remove the player panel and set it aside. Cut and deburr holes for player panel buttons. Trim the cover to panel shape.
- [] 6. Lightly moisten the cabinet with soapy water. Remove the backing from the wallpaper decal. Apply the decal to the player panel. Start at the top and work down. After you've positioned the decal, smooth it outwards. Take care to squeeze out air bubbles. If you can't remove a bubble, pop it with a knife or pin. Then smooth the bubble down. Allow the decal adhesive to set.
- [] 7. Use a sharp knife to trim edges and cut holes for player panel buttons. Position control decals next to the appropriate hole locations. Allow the decal adhesive to set.
- [] 8. Install the NBA hologram decal on the player panel.
- [] 9. Install the plastic cover over the decals and panel. Attach the cover and deburr the edges. Group player controls by color (orange, red, blue and white). Joysticks are black. You must disassemble controls for panel mounting.
- [] 10. Separate the switch from the orange PLAYER 1 START (left START) button. Bend the large prong away from the switch just enough to slide the switch off the housing. Unscrew the nut from the housing. Insert the button housing through its hole from the player panel's front. Screw the nut finger-tight onto the switch housing from the panel back. Rotate the housing so that switch terminals face the panel center. Tighten nuts firmly. Snap the switch back onto the housing.
- [] 11. Repeat the previous step with the other three start buttons.
- [] 12. Consult this chapter's illustration *Player Panel Buttons*. Install the other buttons.
- [] 13. Tighten the pushbutton nuts firmly. Replace player panel components and hardware that you removed earlier.
- [] 14. Measure the thickness of the player panel. If it is less than ½ inch (13 mm), use wooden spacers to recess the joysticks below the surface. Thicker player panels don't require wooden spacers.
- [] 15. Install a carriage bolt in each small hole near each joystick opening. If the player panel is thin, place wood spacers over the carriage bolts. The spacers correct joystick-mounting depth.
- [] 16. Invert one joystick. Remove the "E"-ring from the shaft. Remove the handle and plastic ring (large washer) from the joystick base. *The bushings must remain in the base.* The top of the joystick base fits against the bottom of the player panel (or spacer, if used). Orient the connector toward the START buttons. Align mounting holes. Attach the base to the player panel bottom. Slide the plastic ring around the shaft so that the rough side is beside the knob handle. Slide the shaft through the player panel and base. Replace the "E"-ring. Repeat this step for the remaining joysticks.
- [] 17. Locate the I-40 Joystick Interface Board. Insert a plastic spacer into the bottom of a mounting hole. Press the spacer to seat it fully. Repeat this procedure until all spacers attach to the board.
- [] 18. Place the I-40 Interface Board inside the player panel housing. See the housing drawing. Position the I-40 Board near the housing's right side. Assure that controls don't hit components when you open and close the panel. Leave space above and beside board connectors for mating connectors. Mount the I-40 Board with a screw through each plastic spacer.
- [] 19. The completed player panel should now resemble the illustration below. Install the modified panel housing onto the cabinet with the original mounting hardware. Firmly tighten fasteners.
- [] 20. Install the side and front player panel decals onto the player panel housing.

INSTALL ELECTRONICS TRAY COMPONENTS

	CAUTION: Board set electronic components are static sensitive. Prepare an anti-static work area. Ground yourself before removing circuit boards from their protective shipping materials.
	WARNING: Don't connect cables to the circuit boards or power supply when the power is on. Otherwise, you'll damage VGM electronics and void your warranty.
	CAUTION: Hard disk drives are fragile. Don't stack or drop hard disk drives.
	NOTICE: If your monitor requires positive sync, remove jumper J2 on the SIO Board.

- [] 1. Switch off power and disconnect the line cord from AC line voltage. Disconnect cables from the VGM's printed circuit boards. Remove the old printed circuit boards. If your VGM includes a disk drive or drive mounting plates, remove them. Store these items in anti-static packaging from new components.
- [] 2. You can attach the new electronics directly to a cabinet wall or to a separate panel. If the cabinet doesn't have a suitable surface, install a wood piece approximately 8 inches (20 cm) from the rear door.
- [] 3. Unpack the Electronics Tray and place it on a flat work surface. Take note of the Banshee Video Board, which is bolted to the Electronics Tray. The Banshee Video Board is a small, rectangular circuit card. You'll notice a steel header bracket at one of the Video Board's short ends.
- [] 4. Unpack the three, unmounted circuit boards and position them over the Electronics Tray.
- [] 5. Find the CPU Board. The CPU Board is a roughly square board, and has a seven-segment LED display. In the center of the CPU Board are two large, heat-sinked ICs. Position the CPU Board's 15-pin connector beside the Video Board's header bracket. Then plug the CPU Board into the Banshee Video Board.
- [] 6. Find the Sound I/O Board. The Sound I/O Board is a roughly square board, with a JAMMA connector on one side. This board also includes the VGM's DIP-switch banks. Plug the Sound I/O Board into the CPU Board.
- [] 7. Align circuit board mounting holes with standoff posts on the Electronics Tray. Mount the circuit boards to standoffs with 8-32 Phillips pan head screws.
- [] 8. Find the Auxiliary Output Adapter Board. This is a small, rectangular board, with two connectors. It doesn't plug into any of the other boards. Notice the ribbon connector on the side of the Auxiliary Output Adapter Board. Position this connector close to the Sound I/O Board. Screw the Auxiliary Output Adapter Board to standoff posts on the Electronics Tray.
- [] 9. The factory installed the fans for you. They reside beneath the board set and hard drive. If you mounted the boards vertically, the fans should blow upward, across the electronics. You'll want to check the airflow later. (For now, check fan markings that indicate airflow direction.)

TYPICAL ELECTRONICS LAYOUT

WIRE THE CIRCUIT BOARDS

	<p>NOTICE: You must install the Main (JAMMA) Wiring Harness supplied with this conversion kit. This VGM's 49-way joysticks require wires and circuits not found in earlier VGMs. If the connectors in your cabinet don't fit onto the CPU Board or wire colors don't match the JAMMA Chart, contact your authorized distributor for assistance.</p>
	<p>CAUTION: Insulate unused wires within the JAMMA cable, especially red, yellow, orange and black power wires. Secure unused connectors away from the CPU Board and its cover.</p>
	<p>CAUTION: ATTACH CONNECTORS PROPERLY. Be sure that printed circuit board (PCB) connectors mate properly. If connectors don't slip on easily, don't force them. A reversed connector may damage your VGM and void the warranty. Connector keys allow a connector to fit only one set of pins on a board.</p>

- [] 1. Connect the shielded video cable between Video Board jack J4 and CPU Board plug P4. Your video monitor requires either positive or negative sync. If necessary, add or remove the video sync jumper at SIO Board jumper block J2. The default mode is positive sync (no jumper between pins 1 and 2). For negative sync, jump pins 1 and 2.

- [] 2. Locate disk drive power cable H-22900.2. (This cable has separate wires and plastic connectors at each end). Attach the power cable to SIO connector P3 (near a large heatsink). Mate the plug and jack. Press them firmly to seat contacts. *The connector is keyed. Don't use excessive force.*
- [] 3. The disk drive power cable includes three plugs for the fans. Connect these plugs to the fans.
- [] 4. Secure hard disk drive and fan cables with three cable clamps from the kit. Attach the cable clamps to standoffs at three corners of the SIO Board. Use the board's mounting screws to fasten the clamps to the standoffs: Position the first clamp near the SIO Board's large heatsink. Position the second clamp directly across from the first, near the Auxiliary Adapter Board. Position the third clamp near the hard drive.
- [] 5. Locate the hard drive data cable, a ribbon cable. Orient the data cable connector over CPU Board plug P5. Align the connector's striped edge with Pin 1, near the video connector. (The stripe may be red, blue or another color.) Mate the connector halves. Press them firmly to seat contacts.
- [] 6. Connect the Main Harness to the SIO Board edge (JAMMA). This cable has wires for the coin door, control buttons, I-40 Joystick Interface Board, speakers, video monitor, power supply, and so forth. Insulate and secure all extra wires (unused slam tilt switch, coin meter, etc.).
- [] 7. Search through the Main Harness for the Player 4 and Player 3 cables. Player 4 has gray wires with stripes. Player 3 has blue wires with colored stripes. Connect Player 3's plug to SIO Board jack P14, and Player 4's plug to P7.
- [] 8. Find the coin door power connector. (Look for the black, red and orange wire bundle.) Attach this connector to plug P23 on the SIO Board.
- [] 9. Search through the Main Harness for the six-pin monitor connector. Plug this into your monitor.
- [] 10. Connect the Main Harness to the Aux Out Adapter Board at connector P1.
- [] 11. Connect the 20-pin ribbon cable to the Aux Out Adapter Board at jack P1. Connect the other end of this ribbon cable to SIO Board at jack P15.

MOUNT THE ELECTRONICS TRAY

- [] 1. Set the electronics against the wood panel. Use the tray as a template to mark mounting hole locations. *(If you plan to mount the electronics vertically: Orient the Electronics Tray so that its long edges are vertical and large heatsinks are at the top.)*
- [] 2. If necessary, drill pilot holes for mounting screws. Use sheet metal screws to secure the Electronics Tray to the cabinet. Attach the tray with only four corner screws. *Don't use excessive force.*
- [] 3. Remove the hard drive from its package. Locate the hard drive mounting bracket. Set the drive in the mounting bracket. Align screw holes and install the 6-32 screws with spring washers.
- [] 4. Orient the drive and drive mounting bracket over threaded studs on the Electronics Tray. Align the holes. Attach the bracket with 8-32 KEPS® nuts.
- [] 5. Temporarily hold the perforated metal cover over the electronics. Be certain that cover mounting holes are accessible. Relocate the plate if necessary. Don't install the metal cover yet.

- [] 6. Locate the data and power connectors on the hard drive. Connect the free end of the hard drive power cable to the disk drive. Mate the plug and jack. Press them firmly to seat contacts. *Don't use excessive force.*
- [] 7. Position the striped edge of the hard drive data cable by the power cable. Attach the cable to the drive's data connector. *The data connector is keyed. Don't use excessive force.*

WIRE THE CABINET

Kit 15909, Without Optional Player Panel 45494...

	<p>NOTICE: This player panel uses 49-way joysticks and an I-40 Joystick Interface Board (input-multiplexer circuit). The VGM requires additional wiring harnesses. These items must be field installed to customize the unit for each kit.</p>
---	---

- [] 1. Locate cable H-22785. This cable includes a fuse for protection of the Joystick Interface that mounts in the player panel housing. This cable must be mounted in the player panel housing. Remove the fuse from the fuse holder and retain it for reuse.
- [] 2. Open the player panel. Place the fuse holder beside the wall of the player panel housing. Attach the fuse holder with a #6 short sheet metal screw (not supplied). Reinstall the fuse in the holder.
- [] 3. Connect cable H-22785 between the I-40 Joystick Interface Board and each joystick. Player 1 wire colors are mostly white, Player 2 wires are violet, Player 3 are blue, and Player four are gray. The I-40 connectors are User 0 (Player 1), User 1 (Player 2), User 2 (Player 3), and User 3 (Player 4). *This VGM doesn't use the User 4 connector.* Consult the Cabinet Wiring Diagram, and connect the cable wires to the switches. Secure wiring with a cable clamp and cable ties.
- [] 4. Connect the Common terminal of each button on the panel with a black wire. Join this wire with the black wire from the cable. Connect the Normally Open terminals to each of the switch wires.

All Kits...

	<p>CAUTION: <i>Prevent electrical fires and power supply damage!</i> When attaching JAMMA pigtails to the power supply, maintain fusing from the original VGM wiring. If a line was fused before, then the new line must have a fuse, too.</p>
---	---

- [] 5. See the Cabinet Wiring Diagram. Connect your power supply to the pigtail leads from the Main (JAMMA) Harness. Red wires connect to +5 volts DC. Yellow wires connect to -5 volts DC. Orange wires connect to +12 volts DC. Black wires connect to ground. If necessary, solder the appropriate connector onto the Main Harness, or design your own adapter. Thoroughly insulate soldered or pigtail connections.
- [] 6. Connect cabinet speakers to the pigtail leads from the Main Harness. Red-gray and brown-gray wires connect to the left speaker. Red-white and brown-white wires connect to the right speaker. To eliminate serious distortion, be sure to phase the speakers properly. With either speaker, connect the red wire to the speaker's positive phase terminal. On many speakers, a dot marks this terminal. To test for positive phase, connect a 1.5-volt battery to the speaker and observe the cone. If the cone moves inward, reverse the battery leads. When the cone moves outward, the positive battery lead connects to the positive phase terminal. Mark this terminal with a dot.

- [] 7. Locate the square, split ferrite bead. The factory has installed one ferrite bead around DC power conductors (solid color heavy gauge wires with pin numbers 1-6 or A-F). A second bead encircles player panel conductors (striped color lighter gauge wires). Install the remaining ferrite beads on the video monitor cable and power supply wires. The video cable bead should trap a loop of cable. Place all beads as close to the JAMMA connector as possible. Then close and lock each bead. Assure that no wires are pinched or caught in the latches.

LOOP VIDEO CABLE THROUGH BEAD

- [] 8. Locate the central power ground point for the cabinet. (Ground wires are usually green. Some may have a yellow stripe.) Assure that the previously installed ground wire from the controller port still connects to the same central point. Reconnect ground wires that you loosened or removed in previous steps (monitor, player panel, coin door, etc.).
- [] 9. Find the electronics cover. Install plastic grommet RM-37-11 over the aperture where cables pass through the cover. This grommet part is a tough, plastic sleeve. It protects your fingers and your cables from the cover's sharp, metal edge.
- [] 10. Locate the sheet metal screws from the kit. If necessary, drill pilot holes for the screws. Install the electronics cover. Insert a screw in every mounting hole. Fasten the Electronics Tray to the cabinet. Tighten the screws firmly. Take care not to pinch wires.
- [] 11. Connect your coin door switches to the pigtail leads from the Main Harness. If your cabinet doesn't include diagnostic switches, you may add them now. (These momentary switches speed up routine service calls.) Refer to the cabinet wiring diagram in Chapter Five. Thoroughly insulate soldered or pigtail connections.

	<p>NOTICE: You can order the diagnostic switch bracket and switches as Midway part number A-19542-1.</p>
	<p>NOTICE: IF YOU'RE INSTALLING A BILL VALIDATOR, set the validator for 1 pulse per dollar. Also adjust the pulse width setting. The validator must generate pulses with these timing parameters: 50ms on (minimum) and 50ms off (minimum).</p>

CHECK YOUR CABLING JOB

- [] 1. Carefully inspect cables between peripherals and the board set. The main wiring harness edge connector (JAMMA) attaches to the SIO Board.
- [] 2. The hard drive data (ribbon) cable connects the hard drive to CPU Board jack P5. Be sure that you've also connected the hard drive power connector to power cable H-22900.2. The other end of this cable should connect to the SIO Board at P3.

CABLE BLOCK DIAGRAM

- [] 3. The Player 3 connector (blue wires) attaches to the SIO Board at P14. The Player 4 connector (gray wires) attaches to the SIO Board at P7. This connector links SIO circuits to the I-40 Joystick Interface Board.

- [] 4. Open the player control panel and locate player panel cable H-22785. This cable connects to the joysticks, switches, fuses, and I-40 adapter. Connectors designated Player 1 (mostly white wire colors) and Player 2 (violet) mate with the same color cables from the main harness. Player 3 (blue) and Player 4 (gray) connectors mate with the same color cables from the main harness. Power connectors (red and black) from player panel fuses mate with the same color cable from the main harness.

- [] 5. Check wiring to the Auxiliary Output Adapter Board against instructions in *Wire the Cabinet*. The block diagram below also depicts this wiring.

- [] 6. A shielded cable should join Video Board jack J4 and CPU Board plug P4.

- [] 7. Have you connected the monitor to the Main Harness?

- [] 8. Assure that you've reinstalled all fuses. Check that you've set DIP switches correctly (Chapter Three).

TYPICAL REAR VIEW OF COMPLETED CABINET

POWER UP AND TEST THE VGM

- [] 1. Plug the power cord into the AC line and turn on the VGM. Circuit board indicators should illuminate.
- [] 2. The VGM system loads the program and begins self-diagnostics. If the system doesn't find any errors, the system automatically enters its Attract Mode. If problems occur, check wiring and troubleshoot the machine.
- [] 3. Unlock and open the coin door. Press and hold the TEST MODE button until the Menu System appears on the screen.
- [] 4. Select MONITOR SETUP at the Diagnostics Menu. Confirm proper video display operation and adjust the monitor as necessary.
- [] 5. Select DISK TESTS at the Diagnostics Menu. Run all the tests in order to verify correct drive operation.
- [] 6. Select SWITCH TESTS at the Diagnostics Menu. Check to be sure that all control switches work.
- [] 7. Select DIP-SWITCH TESTS at the Diagnostics Menu. Verify that all switches are set to optimum positions for this VGM.
- [] 8. Select SPEAKER TEST at the Diagnostics Menu. Verify operation of audio system components.
- [] 9. Select EXIT at the Main Menu. The system should enter Game-Over Mode. Open the coin door and press the SERVICE CREDITS button to allow game play. Choose a joystick and press the START button to begin play. Listen to the audio while playing the game. Note sound irregularities (phase problems, no low frequencies, mono audio from stereo speakers, etc.). Check the wiring harness for internal shorts or strapped connections.
- [] 10. Close and lock the coin door. Replace the rear cabinet door. Allow the system to operate for several hours before attempting any game changes.
- [] 11. After you confirm proper operation, submit the VGM for FCC or other agency approval.

CAUTION: You are solely responsible, and Midway has no responsibility for FCC compliance of installed kits. Don't install an FCC compliance label on the product until the FCC acknowledges compliance.

CHAPTER TWO

OPERATION

NOTICE: The term VGM refers to the video game machine.

VIDEO GAME MACHINE (VGM) OPERATION

STARTING UP

Whenever you turn on the machine or restore power, the system executes boot ROM code. The boot ROM contains self-diagnostic tests. These tests automatically verify and report the condition of the disk drive and other hardware. The screen is blank during these tests. If the hardware fails a test, the system displays an error message. The message appears for 30 seconds or until someone presses a button.

- If nobody presses a button, the system quickly completes tests, and then loads game software.
- To skip boot ROM tests and activate the Menu System, press and hold the TEST MODE button. You'll find this button behind the coin door.

Having passed power-up tests, the VGM computer enters Attract Mode. Attract Mode consists of typical game scenes and sounds, alternating with high scores. Attract Mode continues until game play commences.

Players insert currency or tokens to start the game. Pressing a START determines which player receives the credit. The VGM computer asks the players which game that they want to play: *NBA Showtime Gold Edition* or *NFL Blitz 2000 Gold Edition*. Players request one or the other via player panel controls. Then players select a team. The VGM computer associates one team with the Player-1 and Player-2 joysticks. The Player-3 and Player-4 joysticks assume control of the opposing team. Play begins after a countdown period. Play progresses like a real-life football or basketball game. At Game-Over Mode, players may choose to begin again. If players choose not to continue, then the VGM computer returns to Attract Mode.

GAME RULES FOR *NFL BLITZ 2000 GOLD EDITION*

INSTRUCTIONS

Play instructions appear on the information panel over and under the video monitor.

ONE TO FOUR PLAYERS

Players may enter their names for future reference. Then they select teams and run the first play. Players may choose an offensive or defensive play. Additional game information appears on the screen as needed. Team statistics appear at the end of each quarter.

CONTROLLING CHARACTERS

The joystick and action buttons control characters on the field. The joysticks respond to different amounts of deflection as well as direction.

GAME ACTION

Standard league football rules apply, with two exceptions: First downs require 30 yards, and teams only have seven active players. Game adjustment settings determine game length and speed.

The player view of the action changes automatically whenever a better camera angle becomes available. The game sounds include announcer comments and crowd noises.

SCORING

Touchdowns and goals score points, just as in real football games.

PLAY SELECTION FOR *NFL BLITZ 2000 GOLD EDITION*

STANDARD PLAYS

The player may select any of the offensive or defensive plays in the game. Players can choose from pages of standard plays loaded into the game. Use the indicated pushbuttons to view and select any play.

CUSTOM PLAYS

Players may choose to create their own offensive plays rather than depend on the standard plays in the game. Players can design and name their plays using the CREATE PLAY feature, then store these plays for future use. These custom plays become available on an additional page of game plays.

PLAYER CONTROLS FOR *NFL BLITZ 2000 GOLD EDITION*

The player controls are used to maneuver the team members and attack or defend against adversaries.

- **START.** This button allows players to begin or continue play. Use PLAYER 1 START and PLAYER 2 START to begin a two-player game. START has no game action or service function.
- **JUMP / TACKLE.** This button lifts the offensive team member up or causes the defensive player to tackle opponents. Use this same button to create plays or select menu items during service.
- **PASS / CHANGE PLAYER.** This button activates offensive throws. The defense move switches active control to another teammate. Use this same button to create plays or select menu items during service.
- **TURBO.** The TURBO button gives any active character an extra burst of power or speed. Use this same button to create plays or select menu items during service.
- **JOYSTICK.** Each player has a joystick to control the movements of one on-screen character at a time. Use the joystick to create plays or select menu items during service.

RECOMMENDED PLAYER CONTROL LOCATIONS

GAME RULES FOR *NBA SHOWTIME GOLD EDITION*

INSTRUCTIONS

Play instructions appear on the information panel over and under the video monitor.

ONE TO FOUR PLAYERS

The player or players insert currency to start the game. Each player chooses a joystick and presses the nearest START button. Players select a team and two characters. In four-player games, each player controls one character. In games with fewer players, each player controls one character. The VGM computer controls remaining characters. The VGM computer displays team scores and statistics at the end of each quarter. Additional game information appears on screen as needed.

CONTROLLING CHARACTERS

The joystick and action buttons control characters on the basketball court. The joysticks respond to different amounts of deflection as well as direction.

GAME ACTION

Standard NBA basketball rules apply, except that the game only includes four active characters. Game settings determine game length and speed. The player view of the action changes automatically whenever a better camera angle becomes available. Game sounds include announcer comments and crowd noises.

SCORING

The game awards points for baskets, just as in real basketball games.

PLAYER CONTROLS FOR *NBA SHOWTIME GOLD EDITION*

- **JOYSTICK.** Each player's joystick controls the position of that player's characters on the video screen.
- **PASS/STEAL (the blue button)** controls character actions on the video screen. Press PASS/STEAL to attempt to pass or steal the ball.
- **SHOOT/BLOCK (the red button)** controls character actions on the video screen. Press SHOOT/BLOCK to shoot or attempt to block the ball.
- **START (orange buttons).** Each START button allows the corresponding player to begin or continue play.
- **TURBO (The white button)** controls character actions on the video screen. Press TURBO to speed up the pace of a play.

GAME FEATURES OF *NBA SHOWTIME GOLD EDITION*

NBA Showtime is a thrilling, two-on-two basketball game with world-class realism. Each player selects an NBA team, and then chooses a favorite character. Players can also create their own players. If fewer than four players are in the game, the computer operates the remaining characters.

The red team comprises players 1 and 2. Players 3 and 4 make up the challenging, blue team. The red and blue teams square off for the jump and the action begins. Run the ball down court! A steal! Dribble up court! A snap shot! The breathless announcer describes every pass, every shot, every block, every move!

After each quarter, new players can join the fun. Players can also switch to different characters. When the game concludes, team and individual scores appear on the screen. Top scorers may enter their initials or names with a joystick. *NBA Showtime* displays these initials in a high score table.

DIAGNOSTIC CONTROL SWITCH LOCATIONS (TYPICAL INSTALLATION)

OPERATOR CONTROLS

CABINET CONTROLS

- **The DIP Switches** set some system variables. You can set other variables with diagnostic control switches.
- **The Monitor Remote Control Board** allows you to adjust the video display for optimum viewing.
- **The POWER Switch** turns off the video game machine, but does not reset game variables.

DIAGNOSTIC CONTROL SWITCHES

- **The SERVICE CREDITS Button** allots credits without changing the game's bookkeeping total. SERVICE CREDITS has no function in the Menu System.

- **The TEST MODE Button** causes the VGM to enter the service Menu System. Press the TEST MODE button briefly to run automatic tests. To make game adjustments, press and hold TEST MODE until the Main Menu appears. Within the Menu System, TEST MODE assumes another function. There, it selects a menu line item and calls up the item's submenu. The screen displays this submenu.
- **VOLUME DOWN and VOLUME UP Buttons** set game sound levels. To make minor volume changes, press either button briefly. To make major changes, press and hold a button. In the Menu System, VOLUME UP moves the item highlight bar up the menu. VOLUME DOWN moves the item highlight bar downward.

NOTICE: You must adjust Attract Mode volume independently of Game Mode volume. For greater profits, increase volume levels to draw attention to this game.

MAINTENANCE

- **Cabinet**
Use only non-abrasive cleaners to avoid damaging game graphics. Apply cleaner to a clean cloth or sponge. Wipe the screen clean with this cloth or sponge. *Do not apply cleaner directly on the cabinet!*
- **Control Panel**
Dirt or debris on the joysticks or buttons can affect earnings. Apply the cleaner to a clean cloth. Use the cloth to wipe the controls. *Don't apply the cleaner directly to the controls!*
- **Viewing Glass**
To clean the glass, you don't need to switch off power to the VGM. Apply a mild glass cleaner to a clean cloth or sponge. Use this to wipe the viewing glass. *Do not apply the cleaner directly on the glass!* Liquid could drip down into switch or motor circuits and cause erratic VGM operation.

SERVICING

Only qualified service personnel should perform maintenance and repairs. The following product guidelines apply to all VGM operators and service personnel. Notes, cautions and warnings appear throughout this manual where they apply. Read the SAFETY pages thoroughly before beginning service.

- **Circuit Board Set**
The VGM computer uses a set of three circuit boards. The three boards include the CPU Board, I/O Board and Video Board. Switch off power to the VGM. Open the rear door. To expose the circuit boards, remove their perforated metal cover. Carefully note the orientation of the JAMMA connector and other cables. Extract the harness and hard disk drive ribbon cable from the board connectors. Remove circuit board mounting screws. Lift the circuit boards out of the cabinet and set them in a safe place. Use anti-static packaging from new parts to store boards that you won't reinstall.

	<p>CAUTION: Circuit board edge connectors are fragile. Take care when separating boards in the board set. Never jam the board connectors together. Never plug them together on an extreme angle. If necessary, carefully straighten bent pins with a small, grounded flat blade screwdriver. Also, don't touch exposed foil on printed circuit boards. Skin oils are corrosive.</p>
	<p>NOTICE: Avoid damage to VGM electronics! Turn off VGM power before servicing circuit boards or any electronic assembly. Never "hot plug" circuit boards.</p>

- **Coin Mechanism**

Switch off power to the VGM. Unlock the coin door and swing it open. To clean or replace a coin mechanism, unlatch and remove it. After reinstallation, ensure that the mechanism seats fully its bracket. Close and lock the release latch, and then close the door. Turn on the VGM and change the mechanism setup. Test known good and bad coins to verify operation.

- **Coin Meter**

Switch off power to the VGM. Unlock the cash door and swing it open. The coin meter mounts to a metal plate at the bottom the cash vault. Record the meter count before testing or replacement. Remove the plate's four mounting screws, and then remove the plate.

Disconnect the meter wiring harness at the connectors. Remove front screws and slide the meter out. Assure that a protective diode connects across the replacement meter's terminals. The diode prevents driver circuit damage.

- **Hard Disk Drive**

Switch off power to the VGM. Unlock and remove the rear cabinet door. Remove the perforated metal cover over the VGM electronics. Disconnect the DC power cable from the hard disk drive. Unplug the ribbon cable from the hard drive. Don't disconnect the cables from the CPU Board. Loosen the drive mounting screws and lift the drive out of its mounting bracket. Remove the screws. Save them for reuse in future hard drive installations. When returning a hard drive to your distributor, pack it in an anti-static bag. Box the drive in approved shipping container 08-8068.

	<p>NOTICE: Hard disk drives are very fragile! Handle them with care. Do not stack or drop hard disk drives. Keep disk drives away from magnets, heat and vibration.</p>
---	--

- **Joysticks**

Switch off power to the VGM. Open the player control panel. Mark and disconnect the wiring harness from a joystick. To separate the joystick from the player panel, first remove the joystick shaft. An E-ring secures the shaft. Disengage this E-ring with a small, flatblade screwdriver. Grasp the joystick knob. Extract the stick from the assembly. Then remove 8-32 KEPS® nuts from the corners of the joystick base. Retain fasteners for reassembly.

- **Memory**

	<p>CAUTION: Static electricity builds up on your body. This static can damage or destroy sensitive VGM circuits. BEFORE touching or handling electronic assemblies, discharge static electricity by touching the electronics mounting plate.</p>
	<p>NOTICE: CPU Board and SI/O Board chips don't face same direction. When mounting chips on either board, refer only to chips on the same board for reference. Never use chips another board for reference.</p>

ROM (Read Only Memory) circuits contain computer operating instructions for this VGM. Switch off power to the VGM. Unlock and remove the rear door. Remove the perforated metal cover. Note the ROM chip position. Remove the device with a chip extraction tool. To reinstall a ROM chip, orient the device over its socket. Press the chip firmly to seat pins. *Don't force the chip into the socket.*

VGM ELECTRONICS

INTERNAL COMPONENTS

- **Monitor**

	<p>CAUTION: The video monitor is heavy, with most of the weight toward the front of the assembly. Support the monitor as you remove it from the cabinet.</p>
---	---

Switch off power to the VGM. Open the control panel. Remove the viewing glass and monitor bezel. Unlock and remove the rear door. Disconnect the monitor from the wiring harness, remote adjustment board, and ground wires. Remove the fasteners that secure the monitor frame to its mounting panel. Carefully pull the monitor from the cabinet. Set the monitor in a safe place. Remove the remote adjustment board from the cabinet and reconnect it to the monitor before servicing or replacement. Clean the face of the CRT before reinstalling the monitor bezel.

CHAPTER THREE

DIAGNOSTIC, AUDIT & ADJUSTMENT MENU SYSTEM FOR *NFL BLITZ 2000 GOLD EDITION* GAMES

	<p>NOTICE: This manual is subject to change without notice. Midway reserves the right to make improvements in equipment as progress in engineering warrants.</p>
	<p>NOTICE: GAME-SELECTION SWITCH. Select <i>NBA Showtime</i> or <i>NFL Blitz</i> by flipping switch 8 at DIP bank U13. Then power down and up again. The Attract Mode for the game you select will appear. <i>The player can still play either game.</i></p>

MENU SYSTEM

WHAT IS THE MENU SYSTEM?

The game's Menu System is a series of auditing, game adjustment and diagnostic screens. We call these screens *menus*, because they present options in menu-like lists. You can easily access and apply menus to optimize game performance. For instance...

- Use game audits menus to assess game performance.
- Use adjustment menus to help you to customize game performance. For instance, you can restore factory default game settings. You can also calibrate player controls for accuracy.
- Use diagnostic menus to verify proper equipment operation.

ACTIVATING THE MENU SYSTEM

Open the coin door. Find the TEST MODE switch inside. Press TEST MODE to invoke the Menu System. The game system responds by exiting Game Mode and entering Diagnostic Mode. You can also invoke the Menu System by turning on DIP bank U12, switch 8. (To reenter Game Mode, turn off switch 8.)

AUTOMATIC TESTS

In Diagnostic Mode, the Power-On Self-Test (POST) activates. This routine runs automatically. It can detect faults that cause game or Menu System malfunctions. POST usually takes less than a minute. The test doesn't display anything. Instead, the system boot loader indicates the software revision number and serial numbers. The system boot loader also displays a sound-loading message and other useful information.

At the end of POST, the system displays the Control Functions Menu.

CONTROL FUNCTIONS MENU

The Control Functions Menu is purely informational. It appears for five seconds. Then the Menu System automatically displays the Dual Game Adjustment Menu.

The Control Functions Menu introduces the menu navigation controls. The key point is that you can use either player or diagnostic controls to navigate menus. Diagnostic control switches are particularly helpful when you must troubleshoot player switches. This manual discusses the controls in more detail in this chapter's *Main Menu* section. Also see the page on the menu that interests you.

DUAL GAME ADJUSTMENT MENU

The Dual Game Adjustment Menu is another informational, read-only menu. It appears until you choose to exit. This menu reminds you that some *NFL* settings also affect *NBA* game play. Press any button to exit to the Main Menu.

MAIN MENU

The Main Menu offers you access to the game machine's test, bookkeeping and programmable features. Game audits, adjustments and diagnostics are line items on the Main Menu. Selecting an item opens its submenu. Every submenu presents various options that you may act upon.

MENU LAYOUT

Menus differ, but related information tends to occupy the same menu locations.

- The block at the top, center of each menu displays the current menu title.
- Data (menu items, video signals, statistics, reports, etc.) appears in the center of the menu.
- Messages (explanations, control functions, revision levels) display at the bottom of the menu.

MENU NAVIGATION CONTROLS

Use any player panel joystick to highlight a desired menu item. *You can only select one highlighted item at a time.* To select a highlighted item, press any player panel button. Operator control buttons inside the

coin door serve as backup menu navigation controls. Press VOLUME UP or VOLUME DOWN buttons to highlight a menu item. Press TEST MODE to select a highlighted item.

EXIT OPTIONS

To exit the NFL menus and simultaneously enter the NBA menus, choose NBA MAIN MENU. To return the game to play, highlight either EXIT TO NFL or EXIT TO NBA. Your choice determines the game that will boot. Next, press any button.

	NOTICE: This manual depicts some menus as having two pages. Your video game machine may present these same menus as one-pagers. Monitor resolution affects whether a menu has a second screen.

DIAGNOSTICS

Select DIAGNOSTICS at the Main Menu. Diagnostic tests allow you to verify the condition of the electrical and electronic hardware in the game.

Highlight a test with any player panel joystick. Select the option with any player panel button.

Diagnostic tests assist you in checking and adjusting the game's major systems. By running diagnostics, you can gain an insight into both system hardware and game software. Periodically running diagnostics is a crucial part of maintaining game performance and player satisfaction. Sometimes you can improve game performance by running a diagnostic test and making appropriate adjustments.

MONITOR SETUP

Select MONITOR SETUP at the Diagnostics Menu. The Monitor Patterns routine provides test screens to verify monitor performance or make adjustments.

Highlight an option with any player panel joystick. Select the option with any player panel button.

Color Bars fills the screen with colored stripes. Use the color bars to help you to check or adjust monitor brightness and contrast. The color bars also expose defects in horizontal linearity. Each color bar consists of 32 intensity levels. On a properly adjusted monitor, the top 31 of these levels are visible. Each bar should appear sharp, clear and distinct from bars on either side. Incorrect adjustment can cause missing detail at the top or bottom of a bar. Bent bars indicate horizontal linearity flaws, such as pie crust, pincushion or barrel distortion. *(Correct color bar colors, left to right: Red, Green, Blue, Black, White, Cyan, Yellow, Violet.)* Set controls as follows: 1. Adjust BRIGHTNESS and CONTRAST to minimum. 2. Turn up BRIGHTNESS until the pixels in the black stripe begin to glow (turn dark gray). 3. Bring up the CONTRAST control until you can see 31 bars.

Crosshatch Patterns fill the screen with a grid and a series of dots. Crosshatch Patterns help you to check or adjust several monitor parameters: These include convergence, linearity, active viewing area and dynamic focus. The grid and the dots should be all white in color, with no fringes or parallel images. The lines should be straight and the dots round. For more detail on these adjustments, consult service literature from the monitor manufacturer.

Color Screen tests fill the screen with 100% of the chosen color at normal intensity. The Color Screen tests help you to check or adjust monitor intensity, black level, blanking and color purity. Each screen should be absolutely uniform from top to bottom and side to side. No retrace lines or noise should be visible. Color Screens may not hold their uniformity if the monitor degaussing circuit is defective.

White, Gray and Black Screens fill the screen with black, gray or white at various intensities. These monochrome screens help you to check or adjust monitor convergence, purity, contrast and intensity. These screens also simplify black level and color gun control settings. The screens should be uniform with no color tints or distortion. No retrace lines or noise should be visible.

If tests indicate a need for adjustment, use controls on the Monitor Remote Adjustment Board.

DISK TESTS MENU

Disk Information. The Disk Information routine verifies the interface between the CPU Board Assembly and hard disk drive. The processor requests disk information. Data cannot be retrieved successfully if there is a problem.

Sequential Disk Read. This routine tries to access every bit of data in the order it is stored directly on the disk. The hard disk drive media may be defective if this routine cannot be completed successfully.

Sequential Cache Read. This routine tries to access every bit of data in the order it is stored in the temporary disk memory cache. If this test is not successful, the memory circuits may be faulty.

Random Disk Read. This routine tries to access every bit of data in no particular order directly from the disk. This test may detect problems with ability to position the drive heads accurately over the requested data.

Random Cache Read. This routine tries to access every bit of data in no particular order from the temporary disk memory cache. If the cache fails this test, memory circuits may contain a fault.

Data Integrity Test. This test analyzes the data on the disk drive. The test determines if corrupted data is on the disk. Bad data can cause the program to falter even though the hard disk operates correctly.

File System Check. This routine performs a file-by-file check of the data stored on the hard disk.

Surface Scan. The magnetic material on the disk can become damaged, causing data to be unreadable. This routine locates unusable areas on the disk and marks them for future reference.

Use tests on the Speaker Test menu to verify operation of audio system components. Highlight an option with any player panel joystick. Select the option with any player panel button.

SPEAKER TEST MENU

Channel and Tone Tests. The channel subtests employ voice announcements to verify speaker locations. Use the 100 Hz tone to check the speakers' bass response. Small speakers with weak magnets or poor baffles may cause poor bass response.

Play Tune repeats a series of game sounds. Use PLAY TUNE to check speaker operation and fidelity. If your game has stereo speakers, run PLAY TUNE and test speaker phasing. Muddy, weak or distorted sound during this test may indicate crossed wires or out-of-phase speaker connections. Missing sounds may indicate audio cabling errors.

	<p>NOTICE: Check the volume setting before testing. To test the speakers thoroughly, increase the volume level. Before returning to Game-Over Mode, reset the volume level to its original setting.</p>

AUDITS MENU

Data in the Audits menus helps you to keep records of the game's popularity and earning potential. Use the highlight bar to select the desired subject on the Audits Menu. Each entry on the Audits Menu is the subject for an entire menu of bookkeeping information. On these menus, you can track favorite teams, frequently used offensive and defensive plays, etc.

Some audits menus also include histograms. Histogram menus allow graphical analysis of statistics. This permits visual comparisons between games. Histograms have no bar graphs until the system acquires enough data to plot.

Examine and record all game audit values before performing game service or repairs.

NOTICE: Be careful when clearing audit information. Once you clear data, you can't restore it.

PRICING MENU TERMS

MENU TERM	DISCUSSION

For instance, if a quarter buys 1 unit, then \$1 buys 4 units. (<i>See Coins per Bill.</i>) You insert a coin into a 1-unit coin acceptor. Credits to Continue	Number of games a player must purchase to resume play.
Max Credits	Limits the number of credits that the game will accept.
Coins per Bill	How many coins one bill is worth.

BASIC CUSTOM PRICING. Custom pricing creates an imaginary currency exchange. In this currency exchange, the coins of the realm are “units.” Think of units as a type of cyber-currency, useful only within the game software. By inserting coins, you purchase units.

Since units are only negotiable within game software, the system stores your units for you. When the system receives enough units, it buys a game for you. The price of a game is one “credit.” You can think of credits as a second form of cyber-currency.

Even though you’ve now bought one game, you may not be able to begin playing. In many pricing schemes, you must buy two or more credits to begin play. The idea here is something like a minimum order of goods at a store. That is, the operator can “shrink-wrap” two or more games in a package. You can’t play unless you buy the entire package.

• **1 / 25¢ COIN; 1 CREDIT TO START.** In a simple, quarter pricing scheme, the player inserts one coin to buy one unit. The system exchanges that unit for one credit. If CREDITS TO START contains the value one, then play commences. A dollar bill buys four units.

Left Slot Units	Validator Units	Units / Credit	Credits to Start	Coins / Bill
1	4	1	1	4

• **1 / 3 X 25¢; 2 CREDITS TO START.** Again, assuming quarter slots, here’s one way to implement 75¢ pricing... In this scheme, each coin that the player inserts buys one unit. The system exchanges three units for one credit. CREDITS TO START contains the value two. To play, the player must pay for two credits. In this scheme, a dollar buys four units.

Left Slot Units	Validator Units	Units / Credit	Credits to Start	Coins / Bill
1	4	3	2	4

• **2 / 1 COIN; 6 CREDITS TO START.** Now let’s consider a more unusual pricing scheme. Here, the player can buy two units with one coin. The system exchanges each of these units for one credit. Notice that CREDITS TO START contains the value six. To play, the player must insert two more coins to pay for six credits. Also notice that if the player pays with a bill, the system throws in an extra unit.

DIAGNOSTIC, AUDIT & ADJUSTMENT MENU SYSTEM FOR *NBA SHOWTIME* GAMES

MENU SYSTEM

WHAT IS THE MENU SYSTEM?

The game's Menu System is a series of auditing, game adjustment and diagnostic screens. We call these screens *menus*, because they present options in menu-like lists. You can easily access and apply menus to optimize game performance. For instance...

- Use game audits menus to assess game performance.
- Use adjustment menus to help you to customize game performance. For instance, you can restore factory default game settings. You can also calibrate player controls for accuracy.
- Use diagnostic menus to verify proper equipment operation.

ACTIVATING THE MENU SYSTEM

Open the coin door. Find the TEST MODE switch inside. Press TEST MODE to invoke the Menu System. The game system responds by exiting Game Mode and entering Diagnostic Mode. You can also invoke the Menu System by turning on DIP bank U12, switch 8. (To reenter Game Mode, turn off switch 8.)

AUTOMATIC TESTS

In Diagnostic Mode, the Power-On Self-Test (POST) activates. This routine runs automatically. It can detect faults that cause game or Menu System malfunctions. POST usually takes less than a minute. The test doesn't display anything. Instead, the system boot loader indicates the software revision number and serial numbers. The system boot loader also displays a sound-loading message and other useful information.

At the end of POST, the system displays the Control Functions Menu.

CONTROL FUNCTIONS

The Control Functions Menu is purely informational. It appears for five seconds. Then the Menu System automatically displays the Dual Game Adjustment Menu.

The Control Functions Menu introduces the menu navigation controls. The key point is that you can use either player or diagnostic controls to navigate menus. Diagnostic control switches are particularly helpful when you must troubleshoot player switches. This manual discusses the controls in more detail in this chapter's *Main Menu* section. Also see the page on the menu that interests you.

CONTROL FUNCTIONS MENU

DUAL GAME ADJUSTMENT MENU

The Dual Game Adjustment Menu is another informational, read-only menu. It appears until you choose to exit. This menu reminds you that some *NBA* settings also affect *NFL* game play. Press any button to exit to the Main Menu.

MAIN MENU

The Main Menu offers you access to the game machine's test, bookkeeping and programmable features. Game audits, adjustments and diagnostics are line items on the Main Menu. Selecting an item opens its submenu. Every submenu presents various options that you may act upon.

MENU LAYOUT

Menus differ, but related information tends to occupy the same menu locations.

- The block at the top, center of each menu displays the current menu title.
- Data (menu items, video signals, statistics, reports, etc.) appears in the center of the menu.
- Messages (explanations, control functions, revision levels) display at the bottom of the menu.

MENU NAVIGATION CONTROLS

Use any player panel joystick to highlight a desired menu item. *You can only select one highlighted item at a time.* To select a highlighted item, press any player panel button. Operator control buttons inside the

coin door serve as backup menu navigation controls. Press VOLUME UP or VOLUME DOWN buttons to highlight a menu item. Press TEST MODE to select a highlighted item.

EXIT OPTIONS

To exit the NBA menus and simultaneously enter the NFL menus, choose NFL MAIN MENU. To return the game to play, highlight either EXIT TO NFL or EXIT TO NBA. Your choice determines the game that will boot. Next, press any button.

	NOTICE: This manual depicts some menus as having two pages. Your video game machine may present these same menus as one-pagers. Monitor resolution affects whether a menu has a second screen.

Diagnostics Menu

DIAGNOSTICS

Select DIAGNOSTICS at the Main Menu. Diagnostic tests allow you to verify the condition of the electrical and electronic hardware in the game.

Highlight a test with any player panel joystick. Select the option with any player panel button.

Diagnostic tests assist you in checking and adjusting the game's major systems. By running diagnostics, you can gain an insight into both system hardware and game software. Periodically running diagnostics is a crucial part of maintaining game performance and player satisfaction. Sometimes you can improve game performance by running a diagnostic test and making appropriate adjustments.

Monitor Setup Menu

MONITOR SETUP

Select MONITOR SETUP at the Diagnostics Menu. The Monitor Patterns routine provides test screens to verify monitor performance or make adjustments.

Highlight an option with any player panel joystick. Select the option with any player panel button.

MONITOR SETUP MENU

Color Bars fills the screen with colored stripes. Use the color bars to help you to check or adjust monitor brightness and contrast. The color bars also expose defects in horizontal linearity. Each color bar consists of 32 intensity levels. On a properly adjusted monitor, the top 31 of these levels are visible. Each bar should appear sharp, clear and distinct from bars on either side. Incorrect adjustment can cause missing detail at the top or bottom of a bar. Bent bars indicate horizontal linearity flaws, such as pie crust, pincushion or barrel distortion. *(Correct color bar colors, left to right: Red, Green, Blue, Black, White, Cyan, Yellow, Violet.)* Set controls as follows: 1. Adjust BRIGHTNESS and CONTRAST to minimum. 2. Turn up BRIGHTNESS until the pixels in the black stripe begin to glow (turn dark gray). 3. Bring up the CONTRAST control until you can see 31 bars.

Crosshatch Patterns fill the screen with a grid and a series of dots. Crosshatch Patterns help you to check or adjust several monitor parameters: These include convergence, linearity, active viewing area and dynamic focus. The grid and the dots should be all white in color, with no fringes or parallel images. The lines should be straight and the dots round. For more detail on these adjustments, consult service literature from the monitor manufacturer.

Color Screen tests fill the screen with 100% of the chosen color at normal intensity. The Color Screen tests help you to check or adjust monitor intensity, black level, blanking and color purity. Each screen should be absolutely uniform from top to bottom and side to side. No retrace lines or noise should be visible. Color Screens may not hold their uniformity if the monitor degaussing circuit is defective.

White, Gray and Black Screens fill the screen with black, gray or white at various intensities. These monochrome screens help you to check or adjust monitor convergence, purity, contrast and intensity. These screens also simplify black level and color gun control settings. The screens should be uniform with no color tints or distortion. No retrace lines or noise should be visible.

If tests indicate a need for adjustment, use controls on the Monitor Remote Adjustment Board.

DISK TESTS MENU

Disk Information. The Disk Information routine verifies the interface between the CPU Board Assembly and hard disk drive. The processor requests disk information. Data cannot be retrieved successfully if there is a problem.

Sequential Read. This routine tries to access every bit of data in the order it is stored directly on the disk. The hard disk drive media may be defective if this routine cannot be completed successfully.

Sequential Cache Read. This routine tries to access every bit of data in the order it is stored in the temporary disk memory cache. If this test is not successful, the memory circuits may be faulty.

Random Read. This routine tries to access every bit of data in no particular order directly from the disk. This test may detect problems with ability to position the drive heads accurately over the requested data.

Random Cache Read. This routine tries to access every bit of data in no particular order from the temporary disk memory cache. If the cache fails this test, memory circuits may contain a fault.

Data Integrity Test. This test analyzes the data on the disk drive. The test determines if corrupted data is on the disk. Bad data can cause the program to falter even though the hard disk operates correctly.

File System Check. This routine performs a file-by-file check of the data stored on the hard disk.

Surface Scan. The magnetic material on the disk can become damaged, causing data to be unreadable. This routine locates unusable areas on the disk and marks them for future reference.

Play Tune repeats a series of game sounds. Use PLAY TUNE to check speaker operation and fidelity. If your game has stereo speakers, run PLAY TUNE and test speaker phasing. Muddy, weak or distorted sound during this test may indicate crossed wires or out-of-phase speaker connections. Missing sounds may indicate audio cabling errors.

	<p>NOTICE: Check the volume setting before testing. To test the speakers thoroughly, increase the volume level. Before returning to Game-Over Mode, reset the volume level to its original setting.</p>

PRICING MENU TERMS

MENU TERM	DISCUSSION
Slot Units; Bill Validator (DBV) Units	Cyber-currency. This adjustment assigns a number of "units" to each coin mechanism or bill acceptor. For instance, if a quarter buys 1 unit, then \$1 buys 4 units. (<i>See Coins per Bill.</i>) You insert a coin into a 1-unit coin acceptor. The system, due to its programming, knows that your coin is worth one unit.

Credits to Continue	Number of games a player must purchase to resume play.
Max Credits	Limits the number of credits that the game will accept.
Coins per Bill	How many coins one bill is worth.

BASIC CUSTOM PRICING. Custom pricing creates an imaginary currency exchange. In this currency exchange, the coins of the realm are "units." Think of units as a type of cyber-currency, useful only within the game software. By inserting coins, you purchase units.

Since units are only negotiable within game software, the system stores your units for you. When the system receives enough units, it buys a game for you. The price of a game is one "credit." You can think of credits as a second form of cyber-currency.

Even though you've now bought one game, you may not be able to begin playing. In many pricing schemes, you must buy two or more credits to begin play. The idea here is something like a minimum order of goods at a store. That is, the operator can "shrink-wrap" two or more games in a package. You can't play unless you buy the entire package.

• **1 / 25¢ COIN; 1 CREDIT TO START.** In a simple, quarter pricing scheme, the player inserts one coin to buy one unit. The system exchanges that unit for one credit. If CREDITS TO START contains the value one, then play commences. A dollar bill buys four units.

Left Slot Units	Validator Units	Units / Credit	Credits to Start	Coins / Bill
1	4	1	1	4

• **1 / 3 X 25¢; 2 CREDITS TO START.** Again, assuming quarter slots, here's one way to implement 75¢ pricing... In this scheme, each coin that the player inserts buys one unit. The system exchanges three units for one credit. CREDITS TO START contains the value two. To play, the player must pay for two credits. In this scheme, a dollar buys four units.

Left Slot Units	Validator Units	Units / Credit	Credits to Start	Coins / Bill
1	4	3	2	4

• **2 / 1 COIN; 6 CREDITS TO START.** Now let's consider a more unusual pricing scheme. Here, the player can buy two units with one coin. The system exchanges each of these units for one credit. Notice that CREDITS TO START contains the value six. To play, the player must insert two more coins to pay for six credits. Also notice that if the player pays with a bill, the system throws in an extra unit.

Left Slot Units	Validator Units	Units / Credit	Credits to Start	Coins / Bill

CHAPTER SIX

TROUBLESHOOTING

	NOTICE: The term VGM refers to the video game machine.
	CAUTION: This VGM uses complex electronic components that are <i>very sensitive to static electricity</i> . Observe the following precautions before handling VGM electronics. Failure to do so may void your warranty and could damage electronic assemblies.

- Before servicing electronics, turn off AC power to the VGM. Wait for capacitors to discharge.
- Before touching or handling electronic assemblies, discharge static electricity on your body. To discharge this static, begin by connecting the line cord to a grounded outlet. Don't turn on the VGM! Next, touch the safety ground stud of the power supply chassis.
- Store electronic assemblies in an anti-static area. Use anti-static bags to store or transport VGM circuit boards. Transport the hard drive in its shipping container.
- Don't remove or connect electronic assemblies when cabinet power is on. Otherwise, you'll damage electronic assemblies and void the VGM warranty.
- After you complete maintenance or service, replace ground wires, shields, safety covers, etc. Install and tighten ground and mounting screws.

	<p>WARNING: HIGH VOLTAGE. VGM monitors generate and store potentially lethal high voltages. Avoid touching any part of the monitor until power has been off for some time. A picture tube can maintain a hazardous charge for up to several days. Only qualified technicians should service monitors. Turn off the power, unplug the VGM and discharge the CRT before attempting service. Even properly discharged tubes can revert to a highly charged state, <i>without reapplication of power.</i></p>
	<p>WARNING: In normal operation, the monitor doesn't require isolation from AC line voltage. During bench servicing, you may need to operate the monitor outside the cabinet. If you do, <i>isolate the monitor from line voltage with an isolation transformer.</i></p>
	<p>CAUTION: Don't operate the monitor without the Remote Adjustment Board.</p>
