#### Precautions for Supplemental Restraint System (SRS) "AIR BAG"

The Supplemental Restraint System "Air Bag", used along with a seat belt, helps to reduce the risk or severity of injury to the driver and front passenger in a frontal collision. The Supplemental Restraint System consists of air bag modules (located in the center of the steering wheel and on the instrument panel on the passenger side), a diagnosis sensor unit, warning lamp, wiring harness and spiral cable. Information necessary to service the system safely is included in the **RS section** of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses are covered with yellow insulation either just before the harness connectors or for the complete harness, for easy identification.

General maintenance includes those items which should be checked during normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform checks and inspections themselves or have their NISSAN dealers do them.

ltem	Reference page
OUTSIDE THE VEHICLE The maintenance items listed here should be performed from time to time, unless otherwise specified.	
<b>Tires</b> Check the pressure with a gauge periodically when at a service station, including the spare, and adjust to the specified pressure if necessary. Check carefully for damage, cuts or excessive wear.	_
Wheel nuts When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.	_
Tire rotation Tires should be rotated every 12,000 km (7,500 miles.)	MA-19
Wheel alignment and balance If the vehicle pulls to either side while driving on a straight and evel road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.	MA-19, FA-5
Windshield wiper blades Check for cracks or wear if they do not wipe properly.	
Doors and engine hood Check that all doors and the engine hood as well as the trunk lid or back hatch operate smoothly. Also, make sure that all latches lock securely. Lubricate if neces- sary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lubrication frequently.	MA-21
NSIDE THE VEHICLE The maintenance items listed here should be checked on a regular basis, such as when perform- ng periodic maintenance-cleaning the vehicle, etc.	
_amps Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also, check headlamp aim.	_
Narning lamps and buzzers/chimes Make sure that all warning lamps and buzzers/chimes are operating properly.	
Nindshield wiper and washer Check that the wipers and washer operate properly and that the wipers do not streak.	_
Nindshield defroster Check that air comes out of the defroster outlets properly and in good quantity when operating the heater or air conditioning.	
Steering wheel Check that it has the specified play. Be sure to check for changes in the steering condition, such as excessive play, hard steering or strange noises. Free play: Less than 35 mm (1.38 in)	ST-7
Seats Check seat position controls such as seat adjusters, seatback recliner, etc. to make sure hey operate smoothly and that all latches lock securely in every position. Check that the head estraints move up and down smoothly and that the locks (if equipped) hold securely in all atched positions. Check that the latches lock securely for folding-down rear seatbacks.	—
Seat belts Check that all parts of the seat belt system (e.g., buckles, anchors, adjusters and etractors) operate properly and smoothly and are installed securely. Check the belt webbing for suts, fraying, wear or damage.	MA-21
Clutch pedal Make sure the pedal operates smoothly and check that it has the proper free play.	CL-4
Brakes Check that the brake does not pull the vehicle to one side when applied.	
Brake pedal and booster Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be sure to keep the floor mats away from the pedal.	BR-9, 14
Parking brake Check that the lever has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	BR-33

#### **GENERAL MAINTENANCE**

Item	Reference page
Automatic transaxle "Park" mechanism Check that the lock release button on the selector lever operates properly and smoothly. On a fairly steep hill check that the vehicle is held securely with the selector lever in the "P" position without applying brakes.	<u> </u>
UNDER THE HOOD AND VEHICLE The maintenance items listed here should be checked periodically (e.g., each time you check the engine oil or refuel).	
Windshield washer fluid Check that there is adequate fluid in the tank.	
Engine coolant level Check the coolant level when the engine is cold.	MA-12
Radiator and hoses Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the hoses have no cracks, deformation, deterioration or loose connections.	LC-8
Brake and clutch fluid levels Make sure that the brake and clutch fluid levels are between the "MAX" and "MIN" lines on the reservoir.	MA-16, 18
Battery Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines.	EL-18
Engine drive belts Make sure that no belt is frayed, worn, cracked or oily.	MA-10
Engine oil level Check the level on the dipstick after parking the vehicle on a level spot and turning off the engine.	MA-14
Power steering fluid level and lines Check the level on the dipstick with the engine off. Check the lines for proper attachment, leaks, cracks, etc.	MA-20
Automatic transaxle fluid level Check the level on the dipstick after putting the selector lever in "P" with the engine idling.	MA-17
Exhaust system Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.	MA-16
<b>Underbody</b> The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, and carefully cleaned in those areas where mud and dirt can easily accumulate.	
Fluid leaks Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for awhile. Water dripping from the air conditioning after use is normal. If you should notice any leaks or if gasoline fumes are evident, check for the cause and correct it immediately.	_

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage/time intervals.

#### **SCHEDULE 1**

Follow Periodic Maintenance Schedule 1 if the driving habits frequently include one or more of the following driving conditions:

- Repeated short trips of less than 5 miles (8 km).
- Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing.
- Operating in hot weather in stop-and-go "rush hour" traffic.
- Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use.
- Driving in dusty conditions.
- Driving on rough, muddy, or salt spread roads.
- Towing a trailer, using a camper or a car-top carrier.

#### **SCHEDULE 2**

Follow Periodic Maintenance Schedule 2 if none of the driving conditions shown in Schedule 1 apply to the driving habits.

(7) Inspect the air bag system 10 years after the date of manufacture noted on the FMVSS certification label. \* Maintenance items and intervals with "\*" are recommended by NISSAN for reliable vehicle operation. The owner need not perform such main-tenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

Fluids and Lubricants

\*1: Dexron® III/Mercon® or equivalent may also be used. Outside the continental United States and Alaska contact a NISSAN dealership for more information regarding suitable fluids, including recommended brand(s) of Dexron® III/Mercon® or Dexron® IIE/Mercon® Automatic Transmission Fluid.

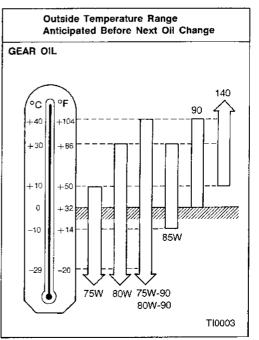

\*2: For further details, see "SAE Viscosity Number".

\*3: Available in mainland U.S.A. through your NISSAN dealer.

#### **SAE Viscosity Number**

SAE 5W-30 viscosity oil is preferred for all temperatures. SAE 10W-30 viscosity oil may be used if the ambient temperature is above -18°C (0°F).

80W-90 is preferable for ambient temperatures below 40°C (104°F).

#### Anti-freeze Coolant Mixture Ratio

The engine cooling system is filled at the factory with a highquality, year-round, anti-freeze coolant solution. The anti-freeze solution contains rust and corrosion inhibitors, therefore additional cooling system additives are not necessary.

#### CAUTION:

When adding or replacing coolant, be sure to use only an ethylene glycol anti-freeze with the proper mixture ratio. See the following examples:

See the followi	ng examples:			EM
Outside tempe	rature down to	Anti-freeze	Soft water	
°C	°۴	Anti-freeze	Soit water	_ LC
-15	5	30%	70%	
-35	-30	50%	50%	EC
			·····	- 69

The use of other types of coolant solutions may damage the cooling system.

#### **Checking Drive Belts**

- 1. Inspect belts for cracks, fraying, wear or oil. If necessary, replace.
- 2. Inspect drive belt deflections by pushing midway between pulleys.

Inspect drive belt deflections when engine is cold. Adjust if belt deflections exceed the limit. Belt deflection:

Unit: mm (in)

	Used be	It deflection	Deflection
-	Limit	Deflection after adjustment	of new belt
Generator & Power steering oil pump	8 (0.31)	6 - 7 (0.24 - 0.28)	5 - 6 (0.20 - 0.24)
Air conditioning compressor	10 (0.39)	7 - 8 (0.28 - 0.31)	6 - 7 (0.24 - 0.28)
Applied pushing force		98 N (10 kg, 22 lb)	

#### Changing Engine Coolant

#### WARNING:

To avoid being scalded, never change the coolant when the C engine is hot.

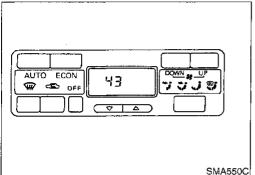

#### -DRAINING ENGINE COOLANT-

1. Set air conditioning system as follows to prevent coolant from remaining in the system.

#### EM

1,0

MA

#### Automatic air conditioning Perform self-diagnosis step 4 of Automatic Air Conditioning system, referring to the following notes. Refer to HA section EC ("Self-diagnosis", "TROUBLE DIAGNOSES - Auto Air Conditioning").

- Turn ignition switch from "OFF" to "ON". а.
- Within 5 seconds after ignition switch is turned "ON", press b. switch and hold in for at least 5 seconds. CL
- Press (HOT) switch 3 times. c.
- Press (DEF) switch 2 times. d.
- Confirm indication of the A/C display shown at left. e.

f.	Wait 10 seconds before			MT
This	s step is necessary to	allow heater water	r cock to open wide.	

#### Manual air conditioning

- Turn ignition switch "ON" and set temperature controller to a. maximum hot position.
- Wait 10 seconds before turning ignition switch "OFF". b.

## Distributor Air relief plug SMA554CA

#### ENGINE MAINTENANCE

#### Changing Engine Coolant (Cont'd)

- 3. Remove drain plug on water pipe.
- 4. Close radiator drain plug and tighten drain plug on water pipe securely.
- Apply sealant to the thread of drain plug on water pipe.
  - (3.5 4.5 kg-m, 25 33 ft-lb)

#### ---FLUSHING COOLING SYSTEM---

- 5. Open air relief plug.
- 6. Fill radiator with water until water spills from the air relief hole, then reinstall air relief plug. Fill radiator and reservoir tank with water and reinstall radiator cap.
- 7. Run engine and warm it up sufficiently.
- 8. Race engine 2 or 3 times under no-load.
- 9. Stop engine and wait until it cools down.
- 10. Drain water.
- 11. Repeat steps 1 through 10 until clear water begins to drain from radiator.

#### -REFILLING ENGINE COOLANT-

- 12. Open radiator cap and air relief plug.
- Fill radiator with coolant up to specified level following steps 1 through 9.

Follow instructions attached to anti-freeze container for mixing ratio of anti-freeze to water.

Engine coolant capacity (With reservoir tank): 7.8 ℓ (8-1/4 US qt, 6-7/8 lmp qt) Reservoir tank capacity: 0.7 ℓ (3/4 US qt, 5/8 lmp qt)

For coolant mixture ratio, refer to "RECOMMENDED FLUIDS AND LUBRICANTS", MA-8.

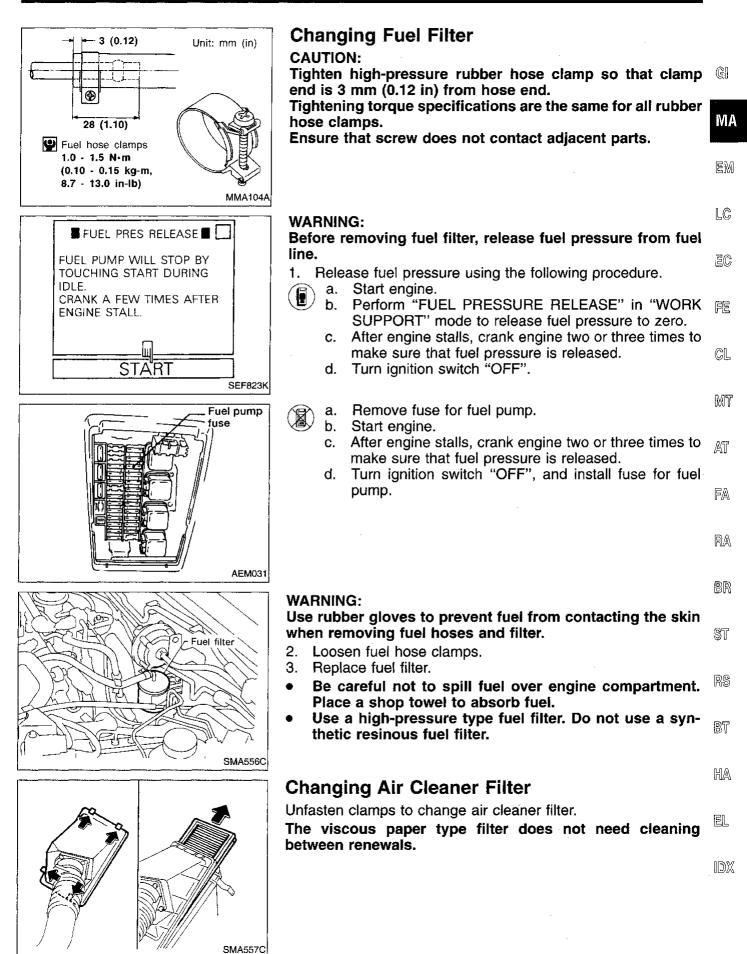

## Pour coolant through coolant filler neck slowly to allow air in system to escape.

- 14. If necessary, add coolant.
- 15. Start and warm up engine, then increase engine speed to 4,000 rpm. Check that radiator coolant level does not lower, and no water noise is heard in heater core.
- Clean excess coolant from engine block.

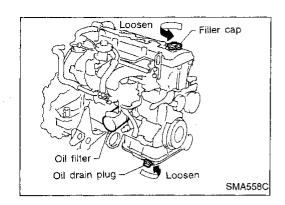

#### **Checking Fuel Lines**

Inspect fuel lines and tank for improper attachment, leaks, cracks, damage, chafing, or deterioration. If necessary, repair or replace.

MA-12

63

#### **Changing Engine Oil**

WARNING:

- Be careful not to burn yourself, as the engine oil is hot.
- Prolonged and repeated contact with used engine oil may cause skin cancer; try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
- 1. Warm up engine, and check for oil leakage from engine components.
- 2. Remove drain plug and oil filler cap.
- 3. Drain oil and refill with new engine oil.

#### Oil grade: API SG or SH

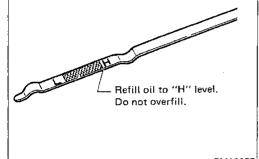

#### Viscosity: Refer to MA-8.

Refill oil capacity (Approximately):

With oil filter change	3.9 ť (4-1/8 US qt, 3-3/8 Imp qt)
Without oil filter change	3.5 £ (3-3/4 US qt, 3-1/8 lmp qt)

#### CAUTION:

- Be sure to clean drain plug and install with new washer. Drain plug:
  - [○]:29 39 N·m (3.0 4.0 kg-m, 22 29 ft-lb)
- The refill capacity depends on the oil temperature and drain time; use "Refill oil capacity" values as a reference and be certain to check with the dipstick when changing the oil.
- 4. Check oil level.
- 5. Start engine and check area around drain plug and oil filter for oil leakage.
- 6. Run engine for a few minutes, then turn it off. After several minutes, check oil level.

#### **Changing Oil Filter**

1. Remove oil filter with a suitable tool.

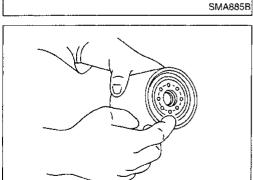

#### WARNING:

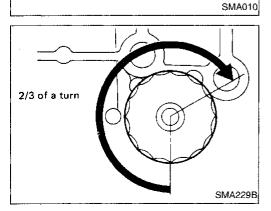

## Be careful not to burn yourself, as the engine and the engine oil are hot.

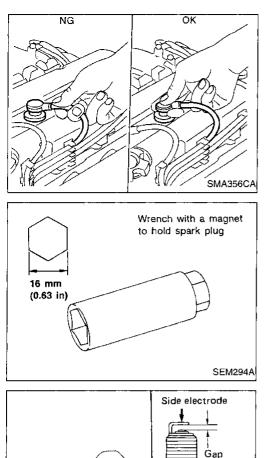

- 2. Clean oil filter mounting surface on cylinder block. Coat rubber seal of new oil filter with engine oil.
- 3. Screw in the oil filter until a slight resistance is felt, then tighten additionally more than 2/3 turn.
- 4. Add engine oil.

#### Refer to "Changing Engine Oil", MA-14.

• Clean excess oil from engine block.

#### **Changing Spark Plugs**

 Disconnect ignition wires from spark plugs at boot. Do not pull on the wire.

MA

G]

EM

LC

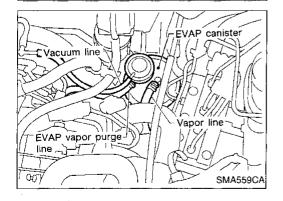

## 2. Remove spark plugs with spark plug socket. **Spark plug:**

Make	NGK	EC
Standard type	BKR5E-11	
Cold type	BKR6E-11 BKR7E-11	٢Z

GL

 Check plug gap of each new spark plug. Gap: 1.0 - 1.1 mm (0.039 - 0.043 in)
 Use a wire brush for cleaning, if necessary.
 Install spark plugs. Reconnect ignition wires according to numbers indicated on them. Spark plug: 20 - 29 N·m (2.0 - 3.0 kg-m, 14 - 22 ft-lb)

#### **Checking Vapor Lines**

SMA476

- Visually inspect vapor lines for improper attachment, cracks, damage, chafing, or deterioration.
   Inspect vacuum relief valve of fuel tank filler cap for
- Inspect vacuum relief valve of fuel tank filler cap for clogging, sticking, etc.
   Refer to EC contion ("Inconcision" "EVAPORATIVE RS

Refer to EC section ("Inspection", "EVAPORATIVE <sup>ME</sup> EMISSION SYSTEM").
