Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System "Air Bag" and "Seat Belt Pre-tensioner", used along with a seat belt, help to reduce the risk or severity of injury to the driver and front passenger in a frontal collision. The Supplemental Restraint System consists of air bag modules (located in the center of the steering wheel and on the instrument panel on the passenger side), seat belt pre-tensioners, a diagnosis sensor unit, warning lamp, wiring harness and spiral cable. Information necessary to service the system safely is included in the **RS section** of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal
 injury caused by unintentional activation of the system.
- All SRS electrical wiring harnesses and connectors are covered with yellow outer insulation. Do not
 use electrical test equipment on any circuit related to the SRS.

MA-2 48

GENERAL MAINTENANCE

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform the checks and inspections themselves or they can have their INFINITI dealers do them.

Item	Reference page	G
OUTSIDE THE VEHICLE The maintenance items listed here should be performed from time to time, unless otherwise specified.		M
Tires Check the pressure with a gauge periodically when at a service station, including the spare, and adjust to the specified pressure if necessary. Check carefully for damage, cuts or excessive wear.	_	E[
Wheel nuts When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.	_	 L(
Tire rotation Tires should be rotated every 12,000 km (7,500 miles).	MA-19	
Wheel alignment and balance if the vehicle should pull to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.	MA-18 FA-7	
Windshield wiper blades Check for cracks or wear if they do not wipe properly.		
Doors and engine hood Check that all doors and the engine hood operate smoothly as well as the trunk lid. Also ensure, that all latches lock securely. Lubricate hinges and latches if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lubrication frequently.	MA-20	A* P[F#
INSIDE THE VEHICLE The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.		R/
Lights Make sure that the headlights, stop lights, tail lights, turn signal lights, and other lights are all operating properly and installed securely. Also check headlight aim.	_	Bi
Warning lights and buzzers/chimes Make sure that all warning lights and buzzers/chimes are operating properly.		. اط
Windshield wiper and washer Check that the wipers and washer operate properly and that the wipers do not streak.	_	
Windshleld defroster Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioner.		 R:
Steering wheel Check that it has the specified play. Be sure to check for changes in the steering condition, such as excessive play, hard steering or strange noises. Free play: Less than 35 mm (1.38 in)	_	 B1
Seats Check seat position controls such as seat adjuster, seatback recliner, etc. to ensure they operate smoothly and that all latches lock securely in every position. Check that the nead restraints move up and down smoothly and that the locks (if so equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seatbacks.		
Seat belts Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly, and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	MA-20	 [D
Brakes Check that the brake does not pull the vehicle to one side when applied.		
Brake pedal and booster Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be certain to keep floor mats away from the pedal.	BR-8 BR-13	

GENERAL MAINTENANCE

Hom	Potorongo nago
Item Parking brake Check that the lever has the proper travel and confirm that your vehicle is held securely on a fairly steep hill with only the parking brake applied.	Reference page BR-29
Automatic transmission "Park position" mechanism Check that the lock release button on the selector lever operates properly and smoothly. On a fairly steep hill check that your vehicle is held securely with the selector lever in the "P" position without applying any brakes.	_
UNDER THE HOOD AND VEHICLE The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).	
Windshield washer fluid Check that there is adequate fluid in the tank.	-
Engine coolant level Check the coolant level when the engine is cold.	MA-11
Radiator and hoses Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the hoses have no cracks, deformation, rot or loose connections.	-
Brake fluid level Make sure that the brake fluid level is between the "MAX" and "MIN" ines on the reservoir.	MA-17
Battery Check the fluid level in each cell. It should be between the "MAX" and "MIN" ines.	
Engine drive belts Make sure that no belts is frayed, worn, cracked or oily.	MA-10
ingine oil level Check the level on the dipstick after parking the vehicle on a level spot and turning off the engine.	MA-13
Power steering fluid level and lines Check the level on the dipstick with the engine off. Check the lines for proper attachment, leaks, cracks etc.	MA-19
Automatic transmission fluid level Check the level on the dipstick after putting the selector lever in "P" with the engine idling.	MA-16
Exhaust system Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a small of exhaust fumes, immediately locate the rouble and correct it.	MA-19
Inderbody The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate.	
fluid leaks Check under the vehicle for fuel, oil water or other fluid leaks after the vehi- le has been parked for a while. Water dripping from the air conditioner after use is nor- nal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.	_

MA-4 50

PERIODIC MAINTENANCE

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage/time intervals.

SCHEDULE 1

Follow Periodic Maintenance Schedule 1 if your driving habits frequently includes one or more of the following driving conditions:

- Repeated short trips of less than 5 miles (8 km).
- Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing.
- Operating in hot weather in stop-and-go "rush hour" traffic.
- Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use.
- Driving in dusty conditions.
- Driving on rough, muddy, or salt spread roads.
- Towing a trailer, using a camper or a car-top carrier.

SCHEDULE 2

Follow Periodic Maintenance Schedule 2 if none of the driving conditions shown in Schedule 1 apply to your driving habits.

Abbreviations: R = Replace I = Inspect.

If operating mainly in dusty conditions, more frequent maintenance may be required. 2 3

If vehicle is operated under extremely adverse weather conditions or in areas where ambient temperatures are either extremely low or extremely high, the filters might become clogged. In such an event, replace them immediately,

After 60,000 miles (96,000 km) or 48 months, inspect every 15,000 miles (24,000 km) or 12 months. After 60,000 miles (96,000 km) or 48 months, replace every 30,000 miles (48,000 km) or 24 months.

Replace every 105,000 miles (168,000 km).

If towing a trailer, using a camper or a car-top carrier, or driving on rough or muddy roads, change (not just inspect) oil at every 30,000 miles (48,000 km) or 24 months.

Inspect the air bag system 10 years after the date of manufacture noted on the F.M.V.S.S. certification label. @ **4 @ @ C** *

Maintenance items and intervals with "" are recommended by INFINITI for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

Brake fluid	_	_	_	Genuine Brake Fluid*1 or equivalent DOT 3 (US FMVSS No. 116)
Multi-purpose grease			_	NLGI No. 2 (Lithium soap base)
Air conditioning system refrigerant	_	_	_	R-134a
Air conditioning lubricants		-	_	Nissan A/C System Oil Type R or equivalent

^{*1:} For more information regarding suitable fluids, contact an INFINITI dealership.

These oils can be identified by such labels as EC-I, EC-II, energy conserving, energy saving, improved fuel economy, etc.

SAE Viscosity Number

TI0002

TI0003

54

10W-30 is preferable for ambient temperatures above -18° C (0°F). 20W-40 and 20W-50 are usable for ambient temperatures above 10°C (50°F) for all seasons.

80W-90 for differential gear is preferable for ambient temperatures below 40°C (104°F).

^{*2:} For further details, see "Recommended SAE viscosity number".

^{*3:} Energy conserving oils

RECOMMENDED FLUIDS AND LUBRICANTS

CAUTION:

Anti-freeze Coolant Mixture Ratio

The engine cooling system is filled at the factory with a highquality, year-round, anti-freeze coolant solution. The antifreeze solution contains rust and corrosion inhibitors. Therefore, additional cooling system additives are not necessary.

When adding or replacing coolant, be sure to use only an ethylene glycol anti-freeze with the proper mixture ratio. See the following examples:

	emperature n to	Anti-	Soft
°C	°F	freeze	water
–15	5	30%	70%
-35	-30	50%	50%

The use of other types	of	coolant	solutions	may	damage	your
cooling system.

Checking Drive Belts

- 1. Inspect for cracks, fraying, wear or oil. If necessary, replace with a new one.
- 2. Inspect drive belt deflection by pushing midway between pulleys.

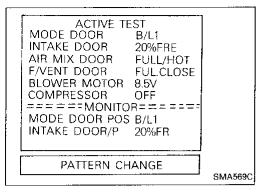

Inspect drive belt deflection when engine is cold.

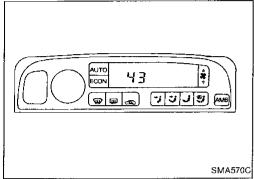

Adjust if belt deflection exceed the limit.

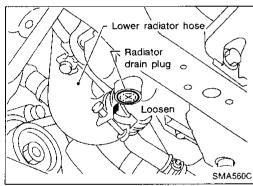

Belt deflection:

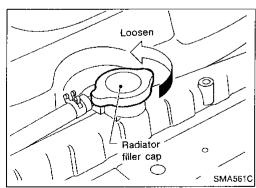

Unit: mm (in)

	Used bet	t deflection	
	Límit	Deflection after adjustment	Deflection of new belt
Alternator	10 (0.39)	6.5 - 7.5 (0.256 - 0.295)	5.5 - 6.5 (0.217 - 0.256)
Air conditioner compressor	14 (0.55)	8.5 - 9.5 (0.335 - 0.374)	7.5 - 8.5 (0.295 - 0.335)
Power steering oil pump	20 (0.79)	13 - 15 (0.51 - 0.59)	11 - 13 (0.43 - 0.51)
Applied pushing force		98 N (10 kg, 22 lb))

Changing Engine Coolant

WARNING:

To avoid the danger of being scalded, never change the coolant when the engine is hot.

 Perform "COMPLEX PATTERNS" test in "ACTIVE TEST" mode of "AUTO A/C" (Automatic Air Conditioner) system.

Set "AIR MIX DOORS" at (full) HOT and wait 10 seconds before turning ignition switch off.

1. Perform self-diagnosis step 2 of Automatic Air Conditioner system, referring to the following notes:

a) Turn ignition switch from "OFF" to "ON".

b) Press "TEMP" knob for at least 5 seconds.

c) Turn "TEMP" knob in Hot or Cool direction until CODE "41" is indicated.

d) Press (DEF) switch 2 times.

e) Confirm indication of the A/C display shown at left.

f) Wait 10 seconds before turning ignition switch off.

Open drain plug at the bottom of radiator, and remove radiator cap.

Open drain plugs on both sides of cylinder block.

 Left side drain plug is located beside the left side engine mounting. G

ΗA

EL

Changing Engine Coolant (Cont'd)

- Flush cooling system by running fresh water through radiator.
- 5. Close drain plug and tighten drain plugs securely.
- Apply sealant to the drain plug thread.

(3.5 - 4.5 kg-m, 25 - 33 ft-lb)

Coolant capacity (With reservoir tank):

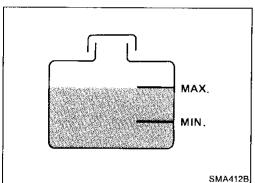

9.28 (9-3/4 US qt, 8-1/8 Imp qt)

Reservoir tank capacity:

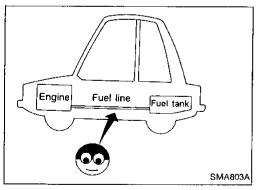

1.0ℓ (1-1/8 US qt, 7/8 Imp qt)

Regarding anti-freeze coolant mixture ratio, see MA-9.

Pour coolant through coolant filler neck slowly to allow air in system to escape.

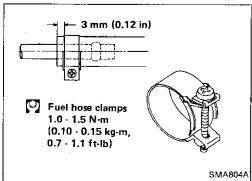

- Start engine and warm it up until it reaches normal operating temperature. Then race engine 2 or 3 times under no-load. Watch coolant temperature gauge for signs of overheating.
- 8. Stop engine. After it completely cools down, refill radiator up to filler opening. Fill reservoir tank up to the "H" level.
- 9. Check drain cock and drain plug for any sign of leakage.

Checking Fuel Lines

Inspect fuel lines and tank for improper attachment and for leaks, cracks, damage, chafing or deterioration.

If necessary, repair or replace.

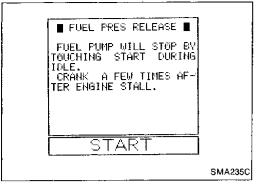

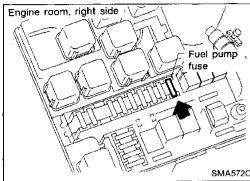

CAUTION:

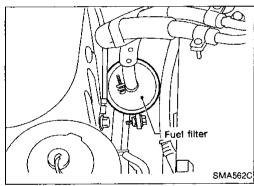

Tighten high-pressure rubber hose clamp so that clamp end is 3 mm (0.12 in) from hose end.

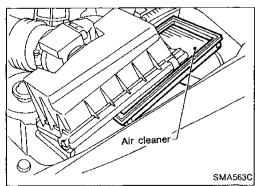

Tightening torque specifications are the same for all rubber hose clamps.

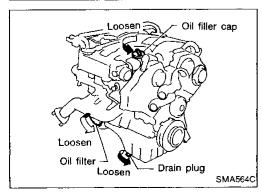

Ensure that screw does not contact adjacent parts.

Changing Fuel Filter

WARNING:

Before removing fuel filter, release fuel pressure from fuel line to eliminate danger.

- 1. Perform "FUEL PRESSURE RELEASE" in "WORK SUPPORT" mode and release fuel pressure to zero.
- 2. Turn ignition switch off.

EM

- 1. Remove fuel pump fuse and start engine.
- 2. After engine stalls, crank engine two or three times to make sure that fuel pressure is released. Then turn ignition switch off and reconnect fuel pump relay.

EF& EC

FE

AT

PD)

FA

- 3. Loosen fuel hose clamps.
- Replace fuel filter. 4.
- Be careful not to spill fuel over engine compartment. Place a shop towel to absorb fuel.
- Use a high-pressure type fuel filter. Do not use a synthetic resinous fuel filter.
- When tightening fuel hose clamps, refer to "Checking Fuel RA Lines" (MA-12).

BR

ST

Changing Air Cleaner Filter

Unfasten clamps to change air cleaner filter.

The viscous paper type filter does not need cleaning between renewals.

Changing Engine Oil

WARNING:

Be careful not to burn yourself, as the engine oil is hot.

- Warm up engine, and check for oil leakage from engine components.
- Remove drain plug and oil filler cap.

MA-13

Changing Engine Oil (Cont'd)

3. Drain oil and refill with new engine oil.

Oil grade: API SG or SH

Viscosity:

See "RECOMMENDED FLUIDS AND LUBRICANTS"

(MA-8).

Refill oil capacity (Approximately): ℓ (US qt, Imp qt)

With oil filter

4.3 (4-1/2, 3-3/4)

Without oil filter

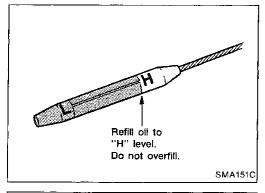

3.9 (4-1/8, 3-3/8)

CAUTION:

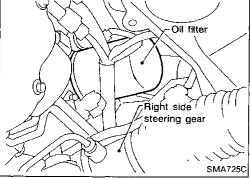

Be sure to clean drain plug and install with new washer.
 Oil pan drain plug:

(3.0 - 4.0 kg-m, 22 - 29 ft-lb)

 Since the refill capacity depends on the oil temperature and drain time; use "Refill oil capacity" values as a reference and be certain to check with the dipstick when changing the oil.

- 4. Check oil level.
- Start engine and check area around drain plug and oil filter for oil leakage.
- Run engine for a few minutes, then turn it off. After several minutes, check oil level.

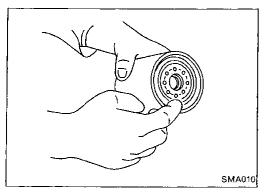

Changing Oil Filter

1. Remove oil filter with a suitable tool.

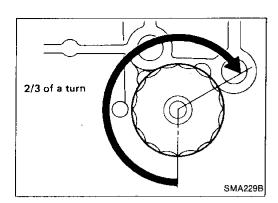

WARNING:

Be careful not to burn yourself, as the engine and engine oil are hot.

2. Clean oil filter mounting surface on cylinder block. Coat rubber seal of new oil filter with engine oil.

ENGINE MAINTENANCE

Changing Oil Filter (Cont'd)

- Screw in the oil filter until a slight resistance is felt, then tighten additionally more than 2/3 turn.
- Add engine oil.

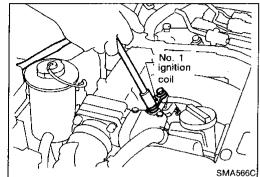

Refer to Changing Engine Oil (MA-13).

LC

Changing Spark Plugs

Disconnect ignition coil harness connector.

Loosen ignition coil fixing bolts and pull out coil from intake manifold collector.

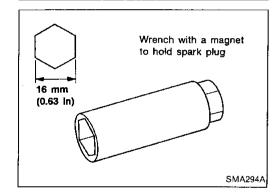

EC

ĘΕ

AT

Checking Vapor Lines

- Visually inspect vapor lines for improper attachment, cracks, damage, chafing or deterioration.
- Inspect vacuum relief valve of fuel tank filler cap for clogging, sticking, etc.

Refer to "EVAPORATIVE EMISSION SYSTEM" in EF & EC section.

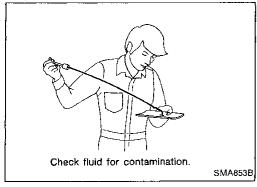

Checking A/T Fluid

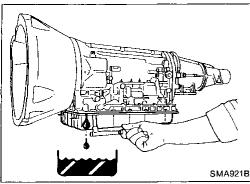

- 1. Warm up engine.
- 2. Check for fluid leakage.
- 3. Before driving, fluid level can be checked at fluid temperatures of 30 to 50°C (86 to 122°F) using "COLD" range on dipstick.
- a. Park vehicle on level surface and set parking brake.
- Start engine and move selector lever through each gear position. Leave selector lever in "P" position.
- c. Check fluid level with engine idling.
- d. Remove dipstick and note reading. If level is at low side of either range, and fluid to the charging pipe.
- e. Re-insert dipstick into charging pipe as far as it will go.
- f. Remove dipstick and note reading. If reading is at low side of range, and fluid to the charging pipe.

Do not overfill.

- 4. Drive vehicle for approximately 5 minutes in urban areas.
- 5. Re-check fluid level at fluid temperatures of 50° to 80°C (122° to 176°F) using "HOT" range on dipstick.

 Check fluid condition. If fluid is very dark or smells burned, or contains friction material (clutches, band, etc.), check operation of A/T. Refer to AT section for checking operation of A/T.

Changing A/T Fluid

- 1. Warm up A/T fluid.
- 2. Stop engine.
- Drain A/T fluid from drain plug and refill with new A/T fluid.
 Always refill same volume with drained fluid.

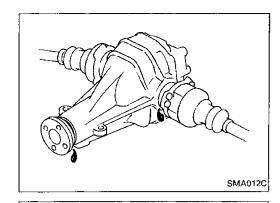

Oil grade:

Genuine ATF or equivalent Oil capacity (With torque converter): 8.3 ℓ (8-3/4 US qt, 7-1/4 Imp qt)

- 4. Run engine at idle speed for five minutes.
- 5. Check fluid level and condition. Refer to "Checking A/T Fluid". If fluid is still dirty, repeat step 2. through 5.

MA-16 62

CHASSIS AND BODY MAINTENANCE

Balancing Wheels

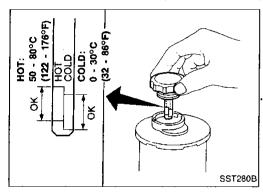

Adjust wheel balance using road wheel center.

Wheel balance (Maximum allowable unbalance): Refer to SDS, MA-21.

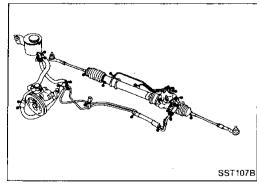

MA-18

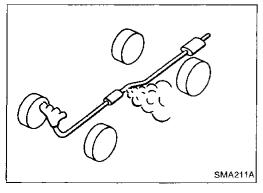

: Check tightening torque

Tire Rotation

Do not include the T-type spare tire when rotating the tires.
 Wheel nuts:

(10 - 12 kg-m, 72 - 87 ft-lb)

 Check gear housing and boots for looseness, damage or grease leakage.

Check connection with steering column for looseness.

STEERING LINKAGE

STEERING GEAR

• Check ball joint, dust cover and other component parts for looseness, wear, damage or grease leakage.

Checking Power Steering Fluid and Lines CHECKING FLUID LEVEL

Check fluid level with engine off.

Check fluid level with dipstick on reservoir cap. Use "HOT" range at fluid temperatures of 50 to 80°C (122 to 176°F). Use "COLD" range at fluid temperatures of 0 to 30°C (32 to 86°F).

CAUTION:

SMA851B

Do not overfill.

CHECKING LINES

Check lines for improper attachment, leaks, cracks, damage, loose connections, chafing and deterioration.

Checking Exhaust System

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage, loose connections, [D]X chafing and deterioration.
