PRECAUTIONS

PRECAUTIONS

Precautions for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

Precautions for work

- After removing and installing the opening/closing parts, be sure to carry out fitting adjustments to check their operation.
- Check the lubrication level, damage, and wear of each part. If necessary, grease or replace it.

Wiring Diagnosis and Trouble Diagnosis

When you read wiring diagrams, refer to the following:

- <u>GI-14, "How to Read Wiring Diagrams"</u>
- PG-4, "POWER SUPPLY ROUTING CIRCUIT"

When you perform trouble diagnosis, refer to the following:

- GI-11, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"
- <u>GI-27, "How to Perform Efficient Diagnosis for an Electrical Incident"</u> Check for any Service bulletins before servicing the vehicle.

EIS0048N

CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to <u>BL-10</u>, "<u>Diagnostic Worksheet</u>". This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics
 are provided so the customer, service adviser and technician are all speaking the same language when
 defining the noise.
- Squeak —(Like tennis shoes on a clean floor)
 Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces = higher pitch noise/softer surfaces = lower pitch noises/edge to surface = chirping.
- Creak—(Like walking on an old wooden floor)
 Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle—(Like shaking a baby rattle) Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock —(Like a knock on a door)
 Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick—(Like a clock second hand)
 Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump—(Heavy, muffled knock noise)
 Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz—(Like a bumble bee)
 Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

SQUEAK AND RATTLE TROUBLE DIAGNOSES

DUPLICATE THE NOISE AND TEST DRIVE

А If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair. If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to dupli-В cate the noise with the vehicle stopped by doing one or all of the following: 1) Close a door. 2) Tap or push/pull around the area where the noise appears to be coming from. 3) Rev the engine. Use a floor jack to recreate vehicle "twist". 5) At idle, apply engine load (electrical load, half-clutch on M/T model, drive position on A/T model). Raise the vehicle on a hoist and hit a tire with a rubber hammer. D Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs. If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body. Е **CHECK RELATED SERVICE BULLETINS** After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related F to that concern or symptom. If a TSB relates to the symptom, follow the procedure to repair the noise. LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE 1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear: J-39565 and mechanic's stethoscope). Narrow down the noise to a more specific area and identify the cause of the noise by: Н removing the components in the area that you suspect the noise is coming from. • Do not use too much force when removing clips and fasteners, otherwise clips and fasteners can be broken or lost during the repair, resulting in the creation of new noise. ΒL tapping or pushing/pulling the component that you suspect is causing the noise. • Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily. J feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise. placing a piece of paper between components that you suspect are causing the noise. Κ looking for loose components and contact marks. Refer to BL-8, "Generic Squeak and Rattle Troubleshooting". REPAIR THE CAUSE L If the cause is a loose component, tighten the component securely. If the cause is insufficient clearance between components: separate components by repositioning or loosening and retightening the component, if possible. Μ insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A NISSAN Squeak and Rattle Kit (J-43980) is available through your authorized NISSAN Parts Department. CAUTION: Do not use excessive force as many components are constructed of plastic and may be damaged. Always check with the Parts Department for the latest parts information. The following materials are contained in the NISSAN Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed. URETHANE PADS [1.5 mm (0.059 in) thick] Insulates connectors, harness, etc. 76268-9E005: 100×135 mm (3.94×5.31 in)/76884-71L01: 60×85 mm (2.36×3.35 in)/76884-71L02: 15×25 mm (0.59×0.98 in) **INSULATOR (Foam blocks)** Insulates components from contact. Can be used to fill space behind a panel. 73982-9E000: 45 mm (1.77 in) thick, 50×50 mm (1.97×1.97 in)/73982-50Y00: 10 mm (0.39 in) thick, 50×50 mm (1.97×1.97 in) INSULATOR (Light foam block)

80845-71L00: 30 mm (1.18 in) thick, 30×50 mm (1.18×1.97 in) FELT CLOTH TAPE Used to insulate where movement does not occur. Ideal for instrument panel applications. 68370-4B000: 15×25 mm (0.59×0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll. The following materials not found in the kit can also be used to repair squeaks and rattles. UHMW (TEFLON) TAPE Insulates where slight movement is present. Ideal for instrument panel applications. SILICONE GREASE Used instead of UHMW tape that will be visible or not fit. Note: Will only last a few months. SILICONE SPRAY Use when grease cannot be applied. DUCT TAPE Use to eliminate movement.

CONFIRM THE REPAIR

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Generic Squeak and Rattle Troubleshooting

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

- 1. The cluster lid A and instrument panel
- 2. Acrylic lens and combination meter housing
- 3. Instrument panel to front pillar garnish
- 4. Instrument panel to windshield
- 5. Instrument panel mounting pins
- 6. Wiring harnesses behind the combination meter
- 7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicone spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

CAUTION:

Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

- 1. Shifter assembly cover to finisher
- 2. A/C control unit and cluster lid C
- 3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

- 1. Finisher and inner panel making a slapping noise
- 2. Inside handle escutcheon to door finisher
- 3. Wiring harnesses tapping
- 4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the NISSAN Squeak and Rattle Kit (J-43980) to repair the noise.

SQUEAK AND RATTLE TROUBLE DIAGNOSES

TRUNK

IRUNK	
Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner. In addition look for:	А
1. Trunk lid bumpers out of adjustment	
2. Trunk lid striker out of adjustment	В
3. The trunk lid torsion bars knocking together	
4. A loose license plate or bracket	С
Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) caus- ing the noise.	0
SUNROOF/HEADLINING	D
Noises in the sunroof/headlining area can often be traced to one of the following:	_
1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise	
2. Sun visor shaft shaking in the holder	Е
3. Front or rear windshield touching headliner and squeaking	
Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.	F
OVERHEAD CONSOLE (FRONT AND REAR)	
Overhead console noises are often caused by the console panel clips not being engaged correctly. Most of these incidents are repaired by pushing up on the console at the clip locations until the clips engage. In addition look for:	G

Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area. UNDERHOOD Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment. 	J K L

- 2. Components that pass through the engine wall
- 3. Engine wall mounts and connectors
- 4. Loose radiator mounting pins
- 5. Hood bumpers out of adjustment
- 6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.

Diagnostic Worksheet

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET

Dear Nissan Customer:

We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

Continue to the back of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

LIWA0276E

SQUEAK AND RATTLE TROUBLE DIAGNOSES

Briefly describe the location where the noise occurs:						
II. WHEN DOES IT OCCUR? (check the boxes that apply)						
anytime	after sitting out in the sun					
1 st time in the morning	when it is raining or wet					
only when it is cold outside	dry or dusty conditions					
only when it is hot outside	🖵 other:					
III. WHEN DRIVING:	IV. WHAT TYPE OF NOISE?					
through driveways	squeak (like tennis shoes on a clean floor)					
over rough roads	Creak (like walking on an old wooden floor)					
over speed bumps	□ rattle (like shaking a baby rattle)					
❑ only at about mph	L knock (like a knock on a door)					
□ on acceleration						
	tick (like a clock second hand) thump (heavy, muffled knock noise)					
coming to a stop	thump (heavy, muffled knock noise)

- Hood hinge 1.
- 4. Hood assembly
- 7 Front fender

2. Hood damper stay 5. Front grille

- 3. Hood lock assembly
- 6. Headlamp
- **CLEARANCE AND SURFACE HEIGHT ADJUSTMENT** В Remove the hood lock assembly and adjust the height by rotating the bumper rubber until the hood clearance of hood and fender becomes 1 mm (0.04 in) lower than fitting standard dimension. 2. Temporarily tighten the hood lock, and position it by engaging it with the hood striker. Check the lock and striker for looseness, and tighten the lock bolt to the specified torque.
- Adjust the clearance and surface height of hood and fender according to the fitting standard dimension by rotating right and left bumper rubbers.

CAUTION:

Adjust right/left gap between hood and each part to the following specification.

Hood and headlamp (B–B) : Less than 2.0 mm

HOOD LOCK ADJUSTMENT

- Move the hood lock to the left or right so that striker center is vertically aligned with hood lock center 1 (when viewed from vehicle front).
- 2. Make sure the secondary latch is properly engaged with the secondary striker with hood's own weight by dropping it from approx. 200 mm (7.87 in) height or by pressing it lightly approx. 3 kg (29 N, 7lb).

CAUTION:

Do not drop the hood from 300 mm (11.81 in) height or higher.

3. After adjusting hood lock, tighten the lock bolts to the specified torque.

Removal and Installation of Hood Assembly

1. Support the hood latch striker with proper material to prevent it from falling.

WARNING:

Body injury may occur if no supporting rod is holding the hood open when removing the hood damper stay.

Remove the hinge nuts from the hood to remove the hood assembly. CAUTION: Operate with two workers, because of its heavy weight.

HOOD

Installation in the reverse order of removal.

Removal and Installation of Hood Lock Control

1. Hood lock assembly

2. Hood lock cable

REMOVAL

- 1. Remove the front grill. Refer to EI-20, "Removal and Installation" .
- 2. Remove the front fender protector (LH). Refer to EI-24, "Removal and Installation" .
- 3. Disconnect the hood lock cable from the hood lock, and unclip it from the radiator core support upper and hoodledge.
- 4. Remove the bolts and the hood opener.
- 5. Remove the grommet on the dashboard, and pull the hood lock cable toward the passenger room. **CAUTION:**

While pulling, be careful not to damage the outside of the hood lock cable.

INSTALLATION

- Pull the hood lock cable through the panel hole to the engine room. Be careful not to bend the cable too much, keeping the radius 100mm (3.94 in) or more.
- 2. Make sure the cable is not offset from the positioning grommet, and push the grommet into the panel hole securely.
- 3. Apply the sealant to the grommet (at * mark) properly.

Securely insert

- 4. Install the cable securely to the lock.
- 5. After installing, check the hood lock adjustment and hood opener operation.

Hood Lock Control Inspection

CAUTION:

If the hood lock cable is bent or deformed, replace it.

- Make sure the secondary latch is properly engaged with the sec-1. ondary striker with hood's own weight by dropping it from approx. 200 mm (7.87 in) height.
- 2. While operating the hood opener, carefully make sure the front end of the hood is raised by approx. 20 mm (0.79 in). Also make sure the hood opener returns to the original position.
- 3. Check the hood lock lubrication condition. If necessary, apply body grease to the points shown in the figure.

BCM is connected to main power window and door lock/unlock switch and power window and door lock/unlock	
switch RH through a serial link. When the front door switch LH is ON (door is open), ground is supplied	
 to BCM terminal 47 	
 through front door switch LH terminals 2 and 3 through grounds P3 and P40 	

- through grounds B7 and B19.
- When the rear door switch upper LH is ON (door is open), ground is supplied
- to BCM terminal 47

Revision: October 2004

- through rear door switch upper LH terminals 1 and 2
- through grounds B7 and B19.

When the rear door switch lower LH is ON (door is open), ground is supplied

- to BCM terminal 47
- through rear door switch lower LH terminals 1 and 2
- through grounds B7 and B19.

When the front door switch RH is ON (door is open), ground is supplied

- to BCM terminal 12
- through front door switch RH terminals 2 and 3
- through grounds B117 and B132.

When the rear door switch upper RH is ON (door is open), ground is supplied

- to BCM terminal 12
- through rear door switch upper RH terminals 1 and 2
- through grounds B117 and B132.

When the rear door switch lower RH is ON (door is open), ground is supplied

- to BCM terminal 12
- through rear door switch lower RH terminals 1 and 2
- through grounds B117 and B132.

CREW CAB

BCM is connected to main power window and door lock/unlock switch and power window and door lock/unlock switch RH through a serial link.

When the front door switch LH is ON (door is open), ground is supplied

- to BCM terminal 47
- through front door switch LH terminal 2
- through front door switch LH case ground.

When the front door switch RH is ON (door is open), ground is supplied

- to BCM terminal 12
- through front door switch RH terminal 2
- through front door switch RH case ground.

When the rear door switch LH is ON (door is open), ground is supplied

- to BCM terminal 48
- through rear door switch LH terminal 2
- through rear door switch LH case ground.

When the rear door switch RH is ON (door is open), ground is supplied

- to BCM terminal 13
- through rear door switch RH terminal 2
- through rear door switch RH case ground.

OUTLINE

Functions available by operating the door lock and unlock switches on driver's door and passenger's door

- Interlocked with the locking operation of door lock and unlock switch, door lock actuators of all doors are locked.
- Interlocked with the unlocking operation of door lock and unlock switch, door lock actuators of all doors are unlocked.

Functions available by operating the key cylinder switch on driver's door

- Interlocked with the locking operation of door key cylinder, door lock actuators of all doors are locked.
- When door key cylinder is unlocked, front door lock assembly LH is unlocked.
- When door key cylinder is unlocked for the second time within 5 seconds after the first operation, door lock actuators on all doors are unlocked.

Key reminder door system

When door lock and unlock switch is operated to lock doors with ignition key in key cylinder and any door open, all door lock actuators are locked and then unlocked.

Work Flow

EIS00491

- 1. Check the symptom and customer's requests.
- 2. Understand the outline of system. Refer to <u>BL-17, "System Description"</u>.
- 3. According to the trouble diagnosis chart, repair or replace the cause of the malfunction. Refer to <u>BL-34</u>, <u>"Trouble Diagnoses Symptom Chart"</u>.
- 4. Does power door lock system operate normally? OK: GO TO 5, NG: GO TO 3.
- 5. Inspection End.

CONSULT–II Function (BCM)

CONSULT-II can display each diagnostic item using the diagnostic test modes shown following.

BCM diagnostic test item	Diagnostic mode	Content
	WORK SUPPORT	Changes setting of each function.
-	DATA MONITOR	Displays BCM input/output data in real time.
-	ACTIVE TEST	Operation of electrical loads can be checked by sending drive signal to them.
Inspection by part	SELF-DIAG RESULTS	Displays BCM self-diagnosis results.
	CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of CAN communication can be read.
-	ECU PART NUMBER	BCM part number can be read.
-	CONFIGURATION	Performs BCM configuration read/write functions.

CONSULT-II INSPECTION PROCEDURE

"DOOR LOCK"

CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carries out CAN communication.

- 1. Turn ignition switch OFF.
- 2. Connect CONSULT-II and CONSULT-II CONVERTER to the data link connector.

EIS00492

- 3. Turn ignition switch ON.
- 4. Touch "START (NISSAN BASED VHCL)".

EIS0049F

REMOTE KEYLESS ENTRY SYSTEM Component Parts and Harness Connector Location

PFP:28596

EIS0049G

А

F

J

L

WIIA0580E

System Description

Power is supplied at all times

- to BCM terminal 70
- through 50A fusible link (letter **f**, located in the fuse and fusible link box).
- to BCM terminal 57
- through 15A fuse [No. 22, located in the fuse block (J/B)].

When the key switch and key lock solenoid (floor shift) or key switch (column shift) is ON (inserted), power is supplied

- to BCM terminal 37
- through key switch and key lock solenoid (floor shift) or key switch (column shift) terminals 3 and 4
- through 10A fuse [No. 19, located in the fuse block (J/B)].

When the ignition switch is ACC or ON, power is supplied

- to BCM terminal 11
- through 10A fuse [No. 4, located in the fuse block (J/B)].

When the ignition switch is ON or START, power is supplied

- to BCM terminal 38
- through 10A fuse (No. 59, located in the fuse and relay box).

KING CAB

BCM is connected to main power window and door lock/unlock switch and power window and door lock/unlock switch RH through a serial link.

When the front door switch LH is ON (door is open), ground is supplied

- to BCM terminal 47
- through front door switch LH terminals 2 and 3
- through grounds B7 and B19.

When the rear door switch upper LH is ON (door is open), ground is supplied

- to BCM terminal 47
- through rear door switch upper LH terminals 1 and 2
- through grounds B7 and B19.

When the rear door switch lower LH is ON (door is open), ground is supplied

- to BCM terminal 47
- through rear door switch lower LH terminals 1 and 2
- through grounds B7 and B19.

When the front door switch RH is ON (door is open), ground is supplied

- to BCM terminal 12
- through front door switch RH terminals 2 and 3
- through grounds B117 and B132.
- When the rear door switch upper RH is ON (door is open), ground is supplied
- to BCM terminal 12
- through rear door switch upper RH terminals 1 and 2
- through grounds B117 and B132.

When the rear door switch lower RH is ON (door is open), ground is supplied

- to BCM terminal 12
- through rear door switch lower RH terminals 1 and 2
- through grounds B117 and B132.

CREW CAB

BCM is connected to main power window and door lock/unlock switch and power window and door lock/unlock switch RH through a serial link.

When the front door switch LH is ON (door is open), ground is supplied

EIS0049H

• to BCM terminal 47	
through front door switch LH terminal 2	A
through front door switch LH case ground.	
When the front door switch RH is ON (door is open), ground is supplied	_
to BCM terminal 12	В
through front door switch RH terminal 2	
through front door switch RH case ground.	C
When the rear door switch LH is ON (door is open), ground is supplied	0
to BCM terminal 48	
through rear door switch LH terminal 2	D
through rear door switch LH case ground.	
When the rear door switch RH is ON (door is open), ground is supplied	
to BCM terminal 13	E
through rear door switch RH terminal 2	
through rear door switch RH case ground.	-
Keyfob signal is inputted to BCM from the remote keyless entry receiver. The remote keyless entry system controls operation of the	F
power door lock	G
interior lamp and step lamps	G
panic alarm	
hazard and horn reminder	Н
keyless power window down (open)	
auto door lock operation	
	BL

- When the keyfob is operated, the signal from the keyfob is sent and the remote keyless entry receiver receives the signal and sends it to the BCM. The BCM only locks/unlocks the doors if the ID number matches. (Remote control entry functions)
- Using the keyfob, the transmitter sends radio waves to the remote keyless entry receiver, which then sends the received waves to the BCM. Only if the ID number matches does the BCM lock/unlock the doors. (Remote control door function)
- Unless the key is inserted into the ignition key cylinder or one of the doors is opened within 1 minute after the UNLOCK switch on the keyfob is pressed, all the doors are automatically locked. (Auto lock function)
- When a door is locked or unlocked, the vehicle turn signal lamps flash and the horn sounds to verify operation. (Active check function)
- When the key is in the ignition key cylinder [when the key switch and key lock solenoid (floor shift) or key switch (column shift) is ON (inserted)] and one of the doors is open, the door lock function does not work when the door lock is operated with the keyfob.
- Keyfob ID set up is available.
- If a keyfob is lost, a new keyfob can be set up. A maximum of 5 IDs can be set up simultaneously.

Remote Control Entry Functions

Operation Description

- When a button on the keyfob is operated, the signal is sent from the keyfob and received by the keyless remote entry receiver.
- The received signal is sent to the BCM and compared with the registered ID number.
- If the ID number matches, the BCM uses communication to send the lock/unlock signal to each door lock actuator.
- When the door lock actuators receive this communication, each operates to lock/unlock its door.

Remote control entry operation conditions

J

Κ

Keyfob operation	Operation condition	
Door lock operation (locking)	 With key removed (key switch: OFF) 	
Door lock operation (locking)	Closing all doors (door switch: OFF)	
Door lock operation (unlocking)	With key removed (key switch: OFF)	

Auto Lock Function

Operation Description

 Unless the key is inserted into the ignition key cylinder, one of the doors is opened, or the keyfob is operated within 1 minute after a door lock is unlocked by keyfob operation, all the doors are automatically locked.

The 1 minute timer count is executed by the BCM and after 1 minute, the BCM sends the lock signal to all doors.

Lock operations are the same as for the remote control entry function.

Active Check Function

Operation Description

When a door is locked or unlocked by keyfob operation, the vehicle turn signals flash and the horn sounds to verify operation.

- When a button on the keyfob is operated, the signal is sent from the remote controller and received by the keyless remote entry receiver.
- The received signal is sent to the BCM and compared with the registered ID number.
- If the ID number matches, the BCM uses communication to send the turn signal flashing and horn signal to the IPDM E/R.
- The IPDM E/R flashes the turn signal lamps and sounds the horn for each keyfob operation.

Operating function of hazard and horn reminder

	C mode		S mode	
Keyfob operation	Lock	Unlock	Lock	Unlock
Hazard warning lamp flash	Twice	Once	Twice	_
Horn sound	Once	—	_	—

Hazard and Horn Reminder

BCM output to IPDM E/R for horn reminder signal as DATA LINE (CAN-H line and CAN-L line). The hazard and horn reminder has C mode (horn chirp mode) and S mode (non-horn chirp mode).

Operating function of hazard and horn reminder

	C m	node	S mode		
Remote controller operation	Lock	Unlock	Lock	Unlock	
Hazard warning lamp flash	Twice	Once	Twice	—	
Horn sound	Once	—	—	—	

How to change hazard and horn reminder mode

U With CONSULT-II

Hazard and horn reminder can be changed using "WORK SUPPORT" mode in "MULTI ANSWER BACK SET".

Without CONSULT-II

When LOCK and UNLOCK signals are sent from the keyfob for more than 2 seconds at the same time, the hazard and horn reminder mode is changed and hazard warning lamp flashes and horn sounds as follows:

CONSULT-II Function (BCM)

CONSULT-II can display each diagnostic item using the diagnostic test modes shown following.

BCM diagnostic test item	Diagnostic mode	Content		
	WORK SUPPORT	Changes setting of each function.	N	
-	DATA MONITOR	Displays BCM input/output data in real time.		
-	ACTIVE TEST	Operation of electrical loads can be checked by sending drive signal to them.		
Inspection by part	SELF-DIAG RESULTS	Displays BCM self-diagnosis results.		
	CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of CAN communication can be read.		
	ECU PART NUMBER	BCM part number can be read.		
	CONFIGURATION	Performs BCM configuration read/write functions.

CONSULT-II Inspection Procedure "MULTI REMOTE ENT"

CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carries out CAN communication.

- 1. Turn ignition switch OFF.
- 2. Connect CONSULT-II and CONSULT-II CONVERTER to the data link connector.

EIS0049Q

- 3. Turn ignition switch ON.
- 4. Touch "START (NISSAN BASED VHCL)".

Touch "MULTI REMOTE ENT".

6.

5. Touch "BCM". If "BCM" is not indicated, refer to <u>GI-38, "CONSULT-II Data Link</u> <u>Connector (DLC) Circuit"</u>.

CONSULT-II Application Items "MULTI REMOTE ENT" Data Monitor

Monitored Item	Description	
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch RH.	
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.	F
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.	
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch LH.	(
KEY ON SW	Indicates [ON/OFF] condition of key switch.	
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.	
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.	ŀ
KEYLESS PANIC	Indicates [ON/OFF] condition of panic signal from keyfob.	
KEYLESS UNLOCK	Indicates [ON/OFF] condition of unlock signal from keyfob.	
KEYLESS LOCK	Indicates [ON/OFF] condition of lock signal from keyfob.	—— Bl
KEY CYL LK-SW	Indicates [ON/OFF] condition of lock signal from door key cylinder switch.	
KEY CYL UN-SW	Indicates [ON/OFF] condition of unlock signal from door key cylinder switch.	
CDL UNLOCK SW	Indicates [ON/OFF] condition of unlock signal from lock/unlock switch.	
CDL LOCK SW	Indicates [ON/OFF] condition of lock signal from lock/unlock switch.	
RKE LCK-UNLCK	Indicates [ON/OFF] condition of lock/unlock signal at the same time from keyfob.	
RKE KEEP UNLK	Indicates [ON/OFF] condition of unlock signal from keyfob.	

Active Test

Test Item	Description					
FLASHER	This test is able to check right and left hazard reminder operation. The right hazard lamp turns on when "RH" on CONSULT-II screen is touched and the left hazard lamp turns on when "LH" on CON-SULT-II screen is touched.					
POWER WINDOW DOWN	This test is able to check power window down operation. The windows are lowered when "ON" on CONSULT-II screen is touched.					
HORN	This test is able to check panic alarm and horn reminder operations. The alarm activate for 0.5 sec- onds after "ON" on CONSULT-II screen is touched.					
DOOR LOCK	This test is able to check door lock operation. The doors lock and unlock based on the item on CON- SULT-II screen touched.					

Work Support

Test Item	Description
REMO CONT ID REGIST	Keyfob ID code can be registered.
REMO CONT ID ERASUR	Keyfob ID code can be erased.
REMO CONT ID CONFIR	It can be checked whether keyfob ID code is registered or not in this mode.
HORN CHIRP SET	Horn chirp function mode can be changed in this mode. The function mode will be changed when "CHANG SETT" on CONSULT-II screen is touched.

Test Item	Description
HAZARD LAMP SET	Hazard lamp function mode can be changed in this mode. The function mode will be changed when "CHANG SETT" on CONSULT-II screen is touched.
MULTI ANSWER BACK SET	Hazard and horn reminder mode can be changed in this mode. The reminder mode will be changed when "CHANG SETT" on CONSULT-II screen is touched.
AUTO LOCK SET	Auto locking function mode can be changed in this mode. The function mode will be changed when "CHANG SETT" on CONSULT-II screen is touched.
PANIC ALRM SET	Panic alarm operation mode can be changed in this mode. The operation mode will be changed when "CHANG SETT" on CONSULT-II screen is touched.
PW DOWN SET	Keyless power window down (open) operation mode can be changed in this mode. The operation mode will be changed when "CHANG SETT" on CONSULT-II screen is touched.

OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of problem before installing new fuse, refer to <u>PG-4</u>, <u>"POWER SUPPLY ROUTING CIRCUIT"</u>.

Μ

Κ

2. CHECK POWER SUPPLY CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect BCM.
- 3. Check voltage between BCM connectors M18, M20 terminals 11, 38, 57, 70 and ground.

Connector	Terminals (Wire color) Signal name		Signal name	Ignition switch	Voltage
_	(+)	(-)		SWIICH	
M20	70 (W/B)	Ground -	Battery power supply	OFF	Battery voltage
W20	57 (Y/R)		Battery power supply	OFF	Battery voltage
M18	11 (O)		ACC power supply	ACC	Battery voltage
IVI I O	38 (W/L)		IGN power supply	ON	Battery voltage

OK or NG

OK >> GO TO 3.

NG >> Repair or replace harness.

3. CHECK GROUND CIRCUIT

Check continuity between BCM connector M20 terminal 67 and ground.

Connector	Tern (Wire	Continuity	
	(+)	(-)	
M20	67 (B)	Ground	Yes

OK or NG

OK >> Power supply and ground circuit is OK.

NG >> Repair or replace harness.

Trouble Diagnoses SYMPTOM CHART

NOTE:

- Always check the "Trouble Diagnosis Procedure" before troubleshooting. Refer to <u>BL-73, "Trouble Diagnosis Procedure"</u>.
- Always check keyfob battery before replacing keyfob. Refer to <u>BL-82, "Keyfob Battery and Function</u> <u>Check"</u>.
- The panic alarm operation of remote keyless entry system does not activate with the ignition key inserted in the ignition key cylinder.
- Use Remote Keyless Entry Tester J-43241 (follow instructions on tester) to check operation of keyfob before replacing keyfob.

Symptom	Diagnoses/service procedure	Reference page
	1. Keyfob battery and function check (use Remote Keyless Entry Tester J-43241)	<u>BL-82</u>
All functions of remote keyless entry system do not operate.	NOTE: If the result of keyfob function check with CONSULT-II is OK, keyfob is not malfunctioning.	
	2. Check BCM and keyless receiver.	<u>BL-83</u>

1. REMOTE KEYLESS ENTRY RECEIVER SIGNAL

OK or NG

OK >> Remote keyless entry receiver signal power supply, ground and signal circuits are OK. Replace BCM. Refer to <u>BCS-19</u>, "Removal and Installation of BCM".

NG >> GO TO 2.

2. REMOTE KEYLESS ENTRY RECEIVER POWER SUPPLY INSPECTION

Check signal voltage waveform between BCM connector M18 terminal 19 and ground using an oscilloscope.

19 (V/W) - Ground

: Refer to <u>BL-68, "Termi-</u> nals and Reference Value for BCM".

OK or NG

OK >> GO TO 3.

NG >> Replace BCM. Refer to <u>BCS-19</u>, "Removal and Installation of <u>BCM</u>".

3. REMOTE KEYLESS ENTRY RECEIVER GROUND CIRCUIT INSPECTION (BCM)

Check continuity between BCM connector M18 terminal 18 and ground.

18 (P) - Ground

: Continuity should exist.

OK or NG

- OK >> GO TO 4.
- NG >> Replace BCM. Refer to <u>BCS-19</u>, "Removal and Installation of <u>BCM</u>".

4. HARNESS INSPECTION BETWEEN BCM AND REMOTE KEYLESS ENTRY RECEIVER

- 1. Disconnect remote keyless entry receiver and BCM connectors.
- 2. Check continuity between remote keyless entry receiver connector M120 terminals 1, 2, 4 and BCM connector M18 terminals 18, 19, 20.
 - 1 (P) 18 (P): Continuity should exist.2 (G/W) 20 (G/W): Continuity should exist.4 (V/W) 19 (V/W): Continuity should exist.
- 3. Check continuity between remote keyless entry receiver terminals 1, 2 and 4 and ground.
 - 1 (P) Ground : Continuity should not exist.
 - 2 (G/W) Ground : Continuity should not exist.
 - 4 (V/W) Ground : Continuity should not exist.

OK or NG

- OK >> Replace remote keyless entry receiver.
- NG >> Repair or replace harness.

ACC Power Check 1. CHECK ACC POWER

EIS004A2

А

F

Н

ΒL

J

With CONSULT-II

Check "ACC ON SW" in DATA MONITOR mode with CONSULT-II. Refer to BL-33, "DATA MONITOR" .

Monitor Item	Condition		
ACC ON SW	Ignition switch position is ACC	: ON	
ACCONSW	Ignition switch position is OFF	: OFF	

Without CONSULT-II

Check voltage between BCM connector M18 terminal 11 and ground.

Connec- tor	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
101	(+)	(-)		(Applox.)
M18	11 (O)	Ground	ACC	Battery voltage
IVITO	11 (0)	Ground	OFF	0

OK or NG

- OK >> ACC power circuit is OK.
- NG >> Check the following.
 - 10A fuse [No. 4, located in fuse block (J/B)]
 - Harness for open or short.

IPDM E/R Operation Check

1. CHECK IPDM E/R INPUT VOLTAGE

Check voltage between IPDM E/R connector E122 terminal 45 and ground.

Connector	Terminal (Wire color)		Voltage (V) (Approx.)
	(+) (-)		(//pp/0x.)
E122	45 (G/W)	Ground	Battery voltage

OK or NG

OK >> Replace IPDM E/R. Refer to <u>PG-28, "Removal and</u> Installation of IPDM E/R".

NG >> GO TO 2.

V

-Θ Θ

((LÕFF

IPDM E/R Connecto

45

EIS004A3

K

Μ

LIIA1278E

2. CHECK IPDM E/R INPUT VOLTAGE

- 1. Turn ignition switch OFF.
- 2. Disconnect IPDM E/R and horn relay.
- 3. Check continuity between IPDM E/R connector E122 terminal 45 and horn relay connector H-1 terminal 1.

45 (G/W) - 1 (R/W) : Continuity should exist

OK or NG

- OK >> Further inspection is necessary. Refer to <u>BL-74, "SYMP-</u> <u>TOM CHART"</u>.
- NG >> Repair or replace harness

Check Hazard Function EISO04A 1. CHECK HAZARD WARNING LAMP
Does hazard indicator flash with hazard switch?
Yes or No
Yes >> Hazard warning lamp circuit is OK. No >> Check "hazard indicator". Refer to <u>LT-75, "TURN SIGNAL AND HAZARD WARNING LAMPS"</u> .
Check Horn Function EIS004A
First, perform the "SELF-DIAG RESULTS" in "BCM" with CONSULT-II, then perform the trouble diagnosis o malfunction system indicated in "SELF-DIAG RESULTS" of "BCM".
1. CHECK HORN FUNCTION
Does horn sound with horn switch?
Yes or No Yes >> Horn circuit is OK.
No >> Check horn circuit. Refer to <u>WW-37, "HORN"</u> .
Check Headlamp Function
First, perform the "SELF-DIAG RESULTS" in "BCM" with CONSULT-II, then perform the trouble diagnosis of malfunction system indicated in "SELF-DIAG RESULTS" of "BCM".
1. CHECK HEADLAMP OPERATION
Does headlamp come on when turning lighting switch ON? Yes or No
Yes >> Headlamp operation circuit is OK. No >> Check headlamp circuit. Refer to LT-5, "HEADLAMP (FOR USA)".
Check Front Room/Map Lamp Illumination Function EISO04A 1. CHECK MAP LAMP ILLUMINATION FUNCTION
When front room/map lamp switch is in DOOR position, open the front door LH or RH.
Front room/map lamp and ignition key illumination should illuminate.
OK or NG OK >> System is OK.
NG >> Check front room/map lamp illumination circuit. Refer to <u>LT-151, "ILLUMINATION"</u> .

ID Code Entry Procedure KEYFOB ID SET UP WITH CONSULT-II

NOTE:

- If a keyfob is lost, the ID code of the lost keyfob must be erased to prevent unauthorized use. A specific ID code can be erased with CONSULT-II. However, when the ID code of a lost keyfob is not known, all controller ID codes should be erased. After all ID codes are erased, the ID codes of all remaining and/or new keyfobs must be re-registered.
- When registering an additional keyfob, the existing ID codes in memory may or may not be erased. If five ID codes are stored in memory when an additional code is registered, only the oldest code is erased. If less than five codes are stored in memory when an additional code is registered, the new ID code is added and no ID codes are erased.
- Entry of a maximum of five ID codes is allowed. When more than five codes are entered, the oldest ID code will be erased.
- Even if the same ID code that is already in memory is input, the same ID code can be entered. The code is counted as an additional code.

CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carries out CAN communication.

- 1. Turn ignition switch OFF.
- Connect CONSULT-II and CONSULT-II CONVERTER to the data link connector.

- 3. Turn ignition switch ON.
- 4. Touch "START (NISSAN BASED VHCL)".

5. Touch "BCM".

If "BCM" is not indicated, refer to <u>GI-38, "CONSULT-II Data Link</u> <u>Connector (DLC) Circuit"</u>.

EIS004A8

NOTE Operate this procedure even if the door is in the state of the unlock. Push any button on keyfob once. (Hazard warning lamp will then flash twice.) At this time, The oldest ID code is erased and the new ID code is entered. No A maximum five ID codes can be entered. If more than five ID codes are entered, the oldest ID code will be erased. Do you want to enter any additional keyfob ID codes?

LIIA1670E

NOTE:

If a keyfob is lost, the ID code of the lost keyfob must be erased to prevent unauthorized use. A specific ID code can be erased with CONSULT-II. However, when the ID code of a lost keyfob is not known, all controller ID codes should be erased. After all ID codes are erased, the ID codes of all remaining and/or new keyfobs must be re-registered.

To erase all ID codes in memory, register one ID code (keyfob) five times. After all ID codes are erased, the ID codes of all remaining and/or new keyfobs must be re-registered.

- When registering an additional keyfob, the existing ID codes in memory may or may not be erased. If five ID codes are stored in memory, when an additional code is registered, only the oldest code is erased. If less than five ID codes are stored in memory, when an additional ID code is registered, the new ID code is added and no ID codes are erased.
- If you need to activate more than two additional new keyfobs, repeat the procedure "Additional ID code D entry" for each new keyfob.
- Entry of maximum five ID codes is allowed. When more than five ID codes are entered, the oldest ID code will be erased.
- Even if same ID code that is already in the memory is input, the same ID code can be entered. The code is counted as an additional code.

Keyfob Battery Replacement

NOTE:

- Be careful not to touch the circuit board or battery terminal.
- The keyfob is water-resistant. However, if it does get wet, immediately wipe it dry.
- 1. Open the lid using a coin.
- 2. Remove the battery.
- 3. Install the new battery, positive side down.
- 4. Close the lid securely. Push the keyfob buttons two or three times to check operation.

EIS004A9

VEHICLE SECURITY (THEFT WARNING) SYSTEM Component Parts and Harness Connector Location

PFP:28491

WIIA0581E

System Description DESCRIPTION Operation Flow

Setting the vehicle security system

Initial condition

• Ignition switch is in OFF position.

Disarmed phase

• When the vehicle is being driven or when doors are open, the vehicle security system is set in the disarmed phase on the assumption that the owner is inside or near the vehicle.

Pre-armed phase and armed phase

• The vehicle security system turns into the "pre-armed" phase when hood and all doors are closed and locked by electronic key. The security indicator lamp illuminates for 30 seconds. Then, the system automatically shifts into the "armed" phase.

Canceling the set vehicle security system

- When one of the following operations is performed, the armed phase is canceled.
- Unlock the doors with the key or the keyfob.

Activating the alarm operation of the vehicle security system

Make sure the system is in the armed phase.

When one of the following operations is performed, the system sounds the horns and flashes the headlamps for about 50 seconds.

- 1. Engine hood or any door is opened before unlocking door with key or keyfob.
- 2. Door is unlocked without using key or keyfob.

POWER SUPPLY AND GROUND CIRCUIT

Power is supplied at all times

- through 10A fuse [No.19, located in the fuse block (J/B)]
- to combination meter (security indicator lamp) terminal 8 and
- through 50A fusible link (letter **f**, located in the fuse and fusible link box)
- to BCM terminal 70
- through 15A fuse [No. 22, located in the fuse block (J/B)]
- to BCM terminal 57
- through 15A fuse (No. 25, located in the fuse and fusible link box)
- to horn relay terminal 2 Revision: October 2004

BL-93

ΒL

Н

EIS004AB

А

D

Е

F

Κ

L

Μ

- through 20A fuse (No. 52, located in the IPDM E/R) and
- through 20A fuse (No. 53, located in the IPDM E/R),
- to IPDM E/R internal CPU.

With the ignition switch in the ACC or ON position, power is supplied

- through 10A fuse [No. 4, located in the fuse box (J/B)]
- to BCM terminal 11.

Ground is supplied

- to BCM terminal 67
- through body grounds M57, M61 and M79 and
- to IPDM E/R terminals 38 and 59
- through body ground E9, E15 and E24.

INITIAL CONDITION TO ACTIVATE THE SYSTEM

The operation of the vehicle security system is controlled by the doors and hood.

To activate the vehicle security system, BCM must receive signals indicating the doors and hood are closed and the doors are locked.

When a door is open, BCM terminal 12, 13, 47 or 48 receives a ground signal from each door switch.

When front door LH is unlocked, BCM terminal 22 receives a signal from terminal 12 (King Cab) or 14 (Crew Cab) of main power window and door lock/unlock switch.

When front door RH is unlocked, BCM terminal 22 receives a signal from terminal 16 of power window and door lock/unlock switch RH or the rear power window switch LH or RH.

VEHICLE SECURITY SYSTEM ALARM OPERATION

The vehicle security system is triggered by

- opening a door
- unlocking door without using the key or keyfob.
- The vehicle security system will be triggered once the system is in armed phase,
- when BCM receives a ground signal at terminals 12, 13, 47, 48 (door switch).

Power is supplied at all times

- to horn relay terminal 2
- through 15A fuse (No. 25, located in fuse and fusible link box).

When the vehicle security system is triggered, ground is supplied intermittently

- from IPDM E/R terminal 45
- to headlamp high relay and
- to horn relay terminal 1.
- The headlamps flash and the horn sounds intermittently.

The alarm automatically turns off after 50 seconds, but will reactivate if the vehicle is tampered with again.

VEHICLE SECURITY SYSTEM DEACTIVATION

To deactivate the vehicle security system, a door must be unlocked with the key or keyfob.

When the key is used to unlock a door, BCM terminal 22 receives signal

• from terminal 12 (King Cab) or 14 (Crew Cab) of the main power window and door lock/unlock switch.

When the BCM receives either one of these signals or unlock signal from keyfob or key cylinder switch, the vehicle security system is deactivated. (Disarmed phase)

PANIC ALARM OPERATION

Remote keyless entry system may or may not operate vehicle security system (horn and headlamps) as required.

When the remote keyless entry system is triggered, ground is supplied intermittently

- from IPDM E/R terminal 45
- to headlamp high relay and
- to horn relay terminal 1.

The headlamp flashes and the horn sounds intermittently.

The alarm automatically turns off after 30 seconds or when BCM receives any signal from keyfob.

CONSULT-II Function (BCM)

EIS004AJ

CONSULT-II can display each diagnostic item using the diagnostic test modes shown following.

DIAGNOSTIC ITEMS DESCRIPTION

BCM diagnostic test item	Diagnostic mode	Content		
	WORK SUPPORT	Changes setting of each function.		
	DATA MONITOR	Displays BCM input/output data in real time.		
	ACTIVE TEST	Operation of electrical loads can be checked by sending drive signal to them.		
Inspection by part	SELF-DIAG RESULTS	Displays BCM self-diagnosis results.		
	CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of CAN communication can be read.		
	ECU PART NUMBER	BCM part number can be read.		
	CONFIGURATION	Performs BCM configuration read/write functions.		

CONSULT-II INSPECTION PROCEDURE

CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carries out CAN communication.

- 1. Turn ignition switch OFF.
- 2. Connect CONSULT-II and CONSULT-II CONVERTER to the data link connector.

- 3. Turn ignition switch ON.
- 4. Touch "START (NISSAN BASED VHCL)".

Monitored Item	Description	
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch RH.	
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.	1
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.	
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch LH.	
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.	
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.	
KEYLESS UNLOCK	Indicates [ON/OFF] condition of unlock signal from keyfob.	
KEYLESS LOCK	Indicates [ON/OFF] condition of lock signal from keyfob.	
KEY CYL LK-SW	Indicates [ON/OFF] condition of lock signal from door key cylinder switch.	
KEY CYL UN-SW	Indicates [ON/OFF] condition of unlock signal from door key cylinder switch.	
CDL UNLOCK SW	Indicates [ON/OFF] condition of unlock signal from lock/unlock switch.	
CDL LOCK SW	Indicates [ON/OFF] condition of lock signal from lock/unlock switch.	

Μ

Test Item	Description			
THEFT IND	This test is able to check security indicator lamp operation. The lamp will be turned on when "ON" on CONSULT-II screen is touched.			
HEADLAMP (HI)	This test is able to check vehicle security lamp operation. The highbeam headlamps will be activated for 0.5 seconds after "ON" on CONSULT-II screen is touched.			
VEHICLE SECURITY HORN	This test is able to check vehicle security horn operation. The horns will be activated for 0.5 sec- onds after "ON" on CONSULT-II screen is touched.			

Work Support

Test Item	Description
SECURITY ALARM SET	This mode can confirm and change security alarm ON-OFF setting.
THEFT ALM TRG	The switch which triggered vehicle security alarm is recorded. This mode is able to confirm and erase the record of vehicle security alarm. The trigger data can be erased by touching "CLEAR" on CONSULT-II screen.

NVIS(NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS) Component Parts and Harness Connector Location

EIS004B4

WIIA0582E

NVIS(NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)

System Description

NVIS (Nissan Vehicle Immobilizer System-NATS) has the following immobilizer functions:

Since only NVIS (NATS) ignition keys, whose IDs have been registered into the ECM and BCM, allow the
engine to run, operation of a stolen vehicle without a NVIS (NATS) registered key is prevented by NVIS
(NATS).

NVIS (NATS) will immobilize the engine if someone tries to start it without the registered key of NVIS (NATS).

- All of the originally supplied ignition key IDs have been NVIS (NATS) registered.
 If requested by the vehicle owner, a maximum of five key IDs can be registered into the NVIS (NATS) components.
- The security indicator blinks when the ignition switch is in OFF or ACC position. NVIS (NATS) warns outsiders that the vehicle is equipped with the anti-theft system.
- When NVIS (NATS) detects trouble, the security indicator lamp lights up while ignition key is in the ON position.
- NVIS (NATS) trouble diagnoses, system initialization and additional registration of other NVIS (NATS) ignition key IDs must be carried out using CONSULT-II hardware and CONSULT-II NVIS (NATS) software. When NVIS (NATS) initialization has been completed, the ID of the inserted ignition key is automatically NVIS (NATS) registered. Then, if necessary, additional registration of other NVIS (NATS) ignition key IDs can be carried out. Regarding the procedures of NVIS (NATS) initialization and NVIS (NATS) ignition key ID registration, refer to CONSULT-II Operation Manual NATS-IVIS/NVIS.
- When servicing a malfunction of the NVIS (NATS) (indicated by lighting up of Security Indicator Lamp) or registering another NVIS (NATS) ignition key ID, it may be necessary to re-register original key identification. Therefore, be sure to receive ALL KEYS from vehicle owner.

System Composition

The immobilizer function of the NVIS (NATS) consists of the following:

- NATS ignition key
- NATS antenna amp. located in the ignition key cylinder
- Body control module (BCM)
- Engine control module (ECM)
- Security indicator

NOTE:

The communication between ECM and BCM uses the CAN communication system.

Revision: October 2004

EIS004B5

Н

ΒL

Κ

ECM Re-communicating Function

EIS004B7

The following procedure can automatically perform re-communication of ECM and BCM, but only when the ECM has been replaced with a new one which has never been energized on-board. (In this step, initialization procedure by CONSULT-II is not necessary)

NOTE:

- When registering new Key IDs or replacing the ECM other than brand new, refer to CONSULT-II Operation Manual NATS-IVIS/NVIS.
- If multiple keys are attached to the key holder, separate them before work.
- Distinguish keys with unregistered key ID from those with registered ID.
- 1. Install ECM.
- Using a registered key (*1), turn ignition switch to ON.
 *1: To perform this step, use the key (except for card plate key) that has been used before performing ECM replacement.
- 3. Maintain ignition switch in ON position for at least 5 seconds.
- 4. Turn ignition switch to OFF.
- 5. Start engine.

If engine can be started, procedure is completed.

If engine cannot be started, refer to CONSULT-II Operation Manual NATS-IVIS/NVIS and initialize control unit.

Wiring Diagram — NATS —

NVIS(NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)

Terminals and Reference Value for BCM

Terminal	Wire Color	Item	Condition	Voltage (V) (Approx.)
21	G	NATS antenna amp.	Ignition switch (OFF \rightarrow ON)	Just after turning ignition switch ON: Pointer of tester should move.
23	G/O	Security indicator lamp	Goes OFF \rightarrow illuminates (Every 2.4 seconds)	Battery voltage $\rightarrow 0$
25	BR	NATS antenna amp.	Ignition switch (OFF \rightarrow ON)	Just after turning ignition switch ON: Pointer of tester should move.
38	W/L	Ignition switch (ON or START)	Ignition switch (ON or START posi- tion)	Battery voltage

CONSULT-II CONSULT-II INSPECTION PROCEDURE

CAUTION:

4.

5.

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carries out CAN communication.

- 1. Turn ignition switch OFF.
- 2. Insert NVIS (NATS) program card into CONSULT-II.

Program card

Turn ignition switch ON.

Touch "START".

: NATS (AEN02C-1)

3. Connect CONSULT-II and CONSULT-II CONVERTER to data link connector.

EIS004B9

NVIS(NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)

CONSULT-II DIAGNOSTIC TEST MODE FUNCTION

CONSULT-II DIAGNOSTIC TEST MODE	Description	L
C/U INITIALIZATION	When replacing any of the following components, C/U initialization and re-registration of all NATS ignition keys are necessary. [(NATS ignition key/ BCM/ ECM]	M
SELF-DIAG RESULTS	Detected items (screen terms) are as shown in the chart. Refer to <u>BL-142, "NVIS (NATS) SELF-DIAGNOSTIC RESULTS ITEM CHART"</u> .	-

NOTE:

- When any initialization is performed, all IDs previously registered will be erased and all NATS ignition keys must be registered again.
- The engine cannot be started with an unregistered key. In this case, the system will show "DIFFERENCE OF KEY" or "LOCK MODE" as a self-diagnostic result on the CONSULT-II screen.
- In rare case, "CHAIN OF ECM-IMMU" might be stored as a self-diagnostic result during key registration procedure, even if the system is not malfunctioning.

Diagnostic Procedure 1

EIS004BD

ŨFF

LUA1279E

Self-diagnostic results:

"CHAIN OF ECM-IMMU" displayed on CONSULT-II screen First perform the "SELF-DIAG RESULTS" in "BCM" with CONSULT-II, then perform the trouble diagnosis of malfunction system indicated "SELF-DIAG RESULTS" of "BCM". Refer to <u>BL-140, "CONSULT-II"</u>

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS "CHAIN OF ECM-IMMU" displayed on CONSULT-II screen.

NOTE:

In rare case, "CHAIN OF ECM-IMMU" might be stored during key registration procedure, even if the system is not malfunctioning.

Is CONSULT-II screen displayed as shown?

Yes >> GO TO 2. No >> GO TO <u>BL-144, "SYMPTOM MATRIX CHART 1"</u>.

BCM connector

70

v

 $\oplus \in$

2. CHECK POWER SUPPLY CIRCUIT FOR BCM

Check voltage between BCM connector M20 terminal 70 and ground.

70 (W/B) – Ground

:Battery voltage

OK or NG

- OK >> GO TO 3.
- NG >> Check the following.
 - 50A fusible link (letter f , located in fuse and fusible link box)

 - Ref. Part No. C1

$\mathbf{3}$. Check ign switch on signal

- 1. Turn ignition switch ON.
- 2. Check voltage between BCM connector M18 terminal 38 and ground.
 - 38 (W/L) Ground

:Battery voltage

OK or NG

- OK >> GO TO 4.
- NG >> Check the following.
 - 10A fuse [No. 59, located in the fuse and relay box]
 - Harness for open or short between fuse and BCM connector
 Ref. part No. C2

NVIS(NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)

PIIA1261E

2. PERFORM INITIALIZATION WITH CONSULT-II

Perform initialization with CONSULT-II. Re-register all NATS ignition key IDs. For initialization and registration of NATS ignition key IDs, refer to "CONSULT-II Operation Manual NATS-IVIS/ NVIS".

NOTE:

If the initialization is not completed or malfunctions, CONSULT-II shows message on the screen.

Can the system be initialized and can the engine be started with reregistered NATS ignition key?

- Yes >> Ignition key ID was unregistered. Ref. part No. D
- No >> BCM is malfunctioning.
 - Replace BCM. Refer to <u>BCS-19</u>, "Removal and Installation of <u>BCM</u>" . **Ref. part No. A**
 - Perform initialization with CONSULT-II.
 - For initialization, refer to "CONSULT-II Operation Manual NATS-IVIS/NVIS".

Diagnostic Procedure 3

Self-diagnostic results:

"ID DISCORD, IMM-ECM" displayed on CONSULT-II screen

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS "ID DISCORD, IMM-ECM" displayed on CONSULT-II screen. **NOTE:**

"ID DISCORD IMM-ECM":

Registered ID of BCM is in discord with that of ECM.

Is CONSULT-II screen displayed as shown?

- Yes >> GO TO 2.
- No >> GO TO <u>BL-144, "SYMPTOM MATRIX CHART 1"</u>.

IMMU INITIALIZATION

INITIALIZATION

FAIL

THEN IGN KEY SW 'OFF' AND

PERFORM C/U INITIALIZATION

'ON', AFTER CONFIRMING SELE-DIAG AND PASSWORD

AGAIN.

2. PERFORM INITIALIZATION WITH CONSULT-II

Perform initialization with CONSULT-II. Re-register all NATS ignition key IDs. For initialization, refer to "CONSULT-II Operation Manual NATS-IVIS/NVIS".

NOTE:

If the initialization is not completed or malfunctions, CONSULT-II shows message on the screen.

Can the system be initialized?

Yes >> • Start engine. (END)

- (System initialization had not been completed. Ref. part No. F)
- No >> ECM is malfunctioning.
 - Replace ECM. Ref. part No. B
 - Perform initialization with CONSULT-II.
 For initialization, refer to "CONSULT-II Operation Manual NATS-IVIS/NVIS".

EIS004BF

SEL297W

NVIS(NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)

4. PERFORM INITIALIZATION WITH CONSULT-II AGAIN

- 1. Replace BCM.
- Perform initialization with CONSULT-II. For initialization, refer to "CONSULT-II Operation Manual NATS-IVIS/NVIS".

NOTE:

If the initialization is not completed or malfunctions, CONSULT-II shows the message on the screen.

Can the system be initialized?

- Yes >> System is OK. (BCM is malfunctioning. **Ref. part No. A**)
- No >> ECM is malfunctioning.
 - Replace ECM. Ref. part No. B
 - Perform initialization with CONSULT-II.
 For initialization, refer to "CONSULT-II Operation Manual NATS-IVIS/NVIS".

Diagnostic Procedure 5

Self-diagnostic results:

"CHAIN OF IMMU-KEY" displayed on CONSULT-II screen

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS "CHAIN OF IMMU-KEY" displayed on CONSULT-II screen.

Is CONSULT-II screen displayed as shown?

Yes >> GO TO 2. No >> GO TO <u>BL-144, "SYMPTOM MATRIX CHART 1"</u>.

IMMU INITIALIZATION
INITIALIZATION FAIL
THEN IGN KEY SW 'OFF' AND 'ON', AFTER CONFIRMING SELF-DIAG AND PASSWORD, PERFORM C/U INITIALIZATION AGAIN.

EIS004BH

2. CHECK NATS ANTENNA AMP. INSTALLATION

Check NATS antenna amp. installation. Refer to <u>BL-154, "How to Replace NATS Antenna Amp."</u>.

OK or NG

- OK >> GO TO 3.
- NG >> Reinstall NATS antenna amp. correctly.

3. CHECK NVIS (NATS) IGNITION KEY ID CHIP

Start engine with another registered NATS ignition key.

Does the engine start?

- Yes >> Ignition key ID chip is malfunctioning.
 - Replace the ignition key. Ref. part No, E5
 - Perform initialization with CONSULT-II.
 For initialization, refer to "CONSULT-II Operation Manual NATS-IVIS/NVIS".

No >> GO TO 4.

NOTE:

If harness is OK, replace BCM, perform initialization with CONSULT-II. For initialization, refer to "CONSULT-II Operation Manual NATS-IVIS/NVIS".

L

6. CHECK NATS ANTENNA AMP. SIGNAL LINE- 2

Check voltage between NATS antenna amp. connector M21 terminal 4 and ground with analog tester.

	Before inserting key into ignition key cylinder			
	Voltage: Battery voltage			
	After inserting key into ignition key cylinder			
4 (BR) - Ground	: Pointer of tester should move for 30 seconds, then return to battery volt- age.			
	Just after turning ignition switch ON			
	: Pointer of tester should move for approx. 1 second, then return to battery voltage.			

OK or NG

OK >> GO TO 7.

NG >> • Repair or replace harness.

NOTE:

If harness is OK, replace BCM, perform initialization with CONSULT-II. For initialization, refer to "CONSULT-II Operation Manual NATS-IVIS/NVIS".

7. CHECK NATS ANTENNA AMP. GROUND LINE CIRCUIT

- 1. Turn ignition switch OFF.
- 2. Disconnect NATS antenna amp. connector.
- 3. Check continuity between NATS antenna amp. connector M21 terminal 3 and ground.

3 (B) – Ground

:Continuity should exist.

OK or NG

- OK >> NATS antenna amp. is malfunctioning. Ref. part No. E6
- NG >> Repair or replace harness.

NOTE:

If harness is OK, replace BCM, perform initialization with CONSULT-II. For initialization, refer to "CON-SULT-II Operation Manual NATS-IVIS/NVIS".

NVIS(NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)

Trouble Diagnoses DIAGNOSTIC PROCEDURE

EIS00620

SYMPTOM: Transmitter does not activate receiver.

Before conducting the procedure given below, make sure that system receiver (garage door opener, etc.) operates with original, hand-held transmitter. If NG, receiver or hand-held transmitter is at fault, not vehicle related.

1. ILLUMINATE CHECK

- Turn ignition switch OFF.
- Does amber light (LED) of transmitter illuminate when any button is pressed?

YES or NO

YES	>> GO TO 2.
NO	>> GO TO 3.

2. TRANSMITTER CHECK

Check transmitter with Tool.*

*For details, refer to Technical Service Bulletin.

OK or NG

OK >> Receiver or handheld transmitter malfunction, not vehicle related.

NG >> Replace transmitter.

3. CHECK BCM OUTPUT POWER SUPPLY

Does room lamp come on when driver side door is opened? Refer to LT-126, "INTERIOR ROOM LAMP" .

Yes or No?

YES >> GO TO 4.

NO >> Repair or replace the compass and thermometer assembly.

4. POWER SUPPLY CHECK

- 1. Disconnect transmitter.
- 2. Check voltage between Homelink® universal transceiver connector R106 terminal 1 and ground.

1 (Y/R) - Ground

: Battery voltage

OK or NG

OK >> GO TO 5.

NG >> Repair or replace harness.

5. ground circuit check

Check continuity between Homelink® universal transceiver connector R106 terminal 2 (B) and body ground.

2 (B) - Ground

: Continuity should exist.

OK or NG

- OK >> Replace compass and thermometer assembly.
- NG >> Repair or replace harness.

Corrosion Protection DESCRIPTION

To provide improved corrosion prevention, the following anti-corrosive measures have been implemented in NISSAN production plants. When repairing or replacing body panels, it is necessary to use the same anti-corrosive measures.

ANTI-CORROSIVE PRECOATED STEEL (GALVANNEALED STEEL)

To improve repairability and corrosion resistance, a new type of anticorrosive precoated steel sheet has been adopted replacing conventional zinc-coated steel sheet.

Galvannealed steel is electroplated and heated to form Zinc-iron alloy, which provides excellent and long term corrosion resistance with cationic electrode position primer.

Nissan Genuine Service Parts are fabricated from galvannealed steel. Therefore, it is recommended that GENUINE NISSAN PARTS or equivalent be used for panel replacement to maintain the anti-corrosive performance built into the vehicle at the factory.

PHOSPHATE COATING TREATMENT AND CATIONIC ELECTRODEPOSITION PRIMER

A phosphate coating treatment and a cationic electrode position primer, which provide excellent corrosion protection, are employed on all body components.

CAUTION:

Confine paint removal during welding operations to an absolute minimum.

Nissan Genuine Service Parts are also treated in the same manner. Therefore, it is recommended that GENU-INE NISSAN PARTS or equivalent be used for panel replacement to maintain anti-corrosive performance built into the vehicle at the factory.

Revision: October 2004

EIS004BQ

ANTI-CORROSIVE WAX

To improve corrosion resistance, anti-corrosive wax is applied inside the body sill and inside other closed sections. Accordingly, when replacing these parts, be sure to apply anti-corrosive wax to the appropriate areas of the new parts. Select an excellent anti-corrosive wax which will penetrate after application and has a long shelf life.

UNDERCOATING

The underside of the floor and wheelhouse are undercoated to prevent rust, vibration, noise and stone chipping. Therefore, when such a panel is replaced or repaired, apply undercoating to that part. Use an undercoating which is rust preventive, soundproof, vibration-proof, shock-resistant, adhesive, and durable.

Precautions in undercoating

- 1. Do not apply undercoating to any place unless specified (such as the areas above the muffler and three way catalyst which are subjected to heat).
- 2. Do not undercoat the exhaust pipe or other parts which become hot.
- 3. Do not undercoat rotating parts.
- 4. Apply bitumen wax after applying undercoating.

Body	Sealing
DESĆF	RIPTION

EIS004BR

The following figure shows the areas which are sealed at the factory. Sealant which has been applied to these areas should be smooth and free from cuts or gaps. Care should be taken not to apply an excess amount of

DESCRIPTION

- All dimensions indicated in the figures are actual.
- When using a tracking gauge, adjust both pointers to equal length. Then check the pointers and gauge itself to make sure there is no free play.
- When a measuring tape is used, check to be sure there is no elongation, twisting or bending.
- Measurements should be taken at the center of the mounting holes.
- An asterisk (*) following the value at the measuring point indicates that the measuring point on the other side is symmetrically the same value.
- The coordinates of the measurement points are the distances measured from the standard line of "X", "Y" and "Z".

FRP	Fiber Reinforced Plastics	170 (338)	Same as above.	Avoid battery acid.
PET	Polyethylene Terephthalate	180 (356)	Same as above.	
PEI	Polyetherimide	200 (392)	Same as above.	

1. When repairing and painting a portion of the body adjacent to plastic parts, consider their characteristics (influence of heat and solvent) and remove them if necessary or take suitable measures to protect them.

2. Plastic parts should be repaired and painted using methods suiting the materials[,] characteristics.

LOCATION OF PLASTIC PARTS

Precautions in Repairing High Strength Steel

High strength steel is used for body panels in order to reduce vehicle weight. Accordingly, precautions in repairing automotive bodies made of high strength steel are described below:

HIGH STRENGTH STEEL (HSS) USED IN NISSAN VEHICLES

Tensile strength	Nissan/Infiniti designation	Major applicable parts	
373 N/mm ² (38kg/mm ² ,54klb/sq in)	SP130	 Front inner pillar upper Front pillar hinge brace Outer front pillar reinforcement Other reinforcements 	
785-981 N/mm ² (80-100kg/mm ² 114-142klb/sq in)	SP150	Outer sill reinforcementMain back pillar	

SP130 is the most commonly used HSS.

SP150 HSS is used only on parts that require much more strength.

Read the following precautions when repairing HSS:

- Additional points to consider
 - The repair of reinforcements (such as side members) by heating is not recommended since it may weaken the component. When heating is unavoidable, do not heat HSS parts above 550°C (1,022°F).

Verify heating temperature with a thermometer.

(Crayon-type and other similar type thermometer are appropriate.)

• When straightening body panels, use caution in pulling any HSS panel. Because HSS is very strong, pulling may cause deformation in adjacent portions of the body. In this case, increase the number of measuring points, and carefully pull the HSS panel.

 When cutting HSS panels, avoid gas (torch) cutting if possible. Instead, use a saw to avoid weakening surrounding areas due to heat. If gas (torch) cutting is unavoidable, allow a minimum margin of 50 mm (1.97in).

EIS004BV

Ε

F

Н

ΒL

J

Κ

L

Μ

PIIA0116E

А

В

• When welding HSS panels, use spot welding whenever possible in order to minimize weakening surrounding areas due to heat.

If spot welding is impossible, use M.I.G. welding. Do not use gas (torch) welding because it is inferior in welding strength.

• The spot weld on HSS panels is harder than that of an ordinary steel panel.

Therefore, when cutting spot welds on a HSS panel, use a low speed high torque drill (1,000 to 1,200 rpm) to increase drill bit durability and facilitate the operation.

- SP150 HSS panels with a tensile strength of 785 to 981 N/ mm² (80 to 100 kg/mm², 114 to 142 klb/sq in), used as reinforcement in the door guard beams, is too strong to repair. When these HSS parts are damaged, the outer panels also sustain substantial damage; therefore, the assembly parts must be replaced.
- Precautions in spot welding HSS This work should be performed under standard working conditions. Always note the following when spot welding HSS:
 - The electrode tip diameter must be sized properly according to the metal thickness.

• The panel surfaces must fit flush to each other, leaving no gaps.

BL-202

• Follow the specifications for the proper welding pitch.

	l
Thickness (t)	Minimum pitch (ℓ)
0.6 (0.024)	10 (0.39) or over
0.8 (0.031)	12 (0.47) or over

Foam Repair

During factory body assembly, foam insulators are installed in certain body panels and locations around the vehicle. Use the following procedure(s) to replace any factory-installed foam insulators.

URETHANE FOAM APPLICATIONS

Use commercially available spray foam for sealant (foam material) repair of material used on vehicle. Read instructions on product for fill procedures.

FILL PROCEDURES

- 1. Fill procedures after installation of service part.
- Remove foam material remaining on vehicle side.
- Clean area in which foam was removed.
- Install service part.
- Insert nozzle into hole near fill area and fill foam material or fill in enough to close gap with the service part.

- 2. Fill procedures before installation of service part.
- Remove foam material remaining on vehicle side.
- Clean area in which foam was removed.
- Fill foam material on wheelhouse outer side.

NOTE:

Fill in enough to close gap with service part while avoiding flange area.

- Install service part.

NOTE:

Refer to label for information on working times.

Replacement Operations DESCRIPTION

This section is prepared for technicians who have attained a high level of skill and experience in repairing collision-damaged vehicles and also use modern service tools and equipment. Persons unfamiliar with body repair techniques should not attempt to repair collision-damaged vehicles by using this section.

Technicians are also encouraged to read Body Repair Manual (Fundamentals) in order to ensure that the original functions and quality of the vehicle can be maintained. The Body Repair Manual (Fundamentals) contains additional information, including cautions and warnings, that are not including in this manual. Technicians should refer to both manuals to ensure proper repairs.

Please note that this information is prepared for worldwide usage, and as such, certain procedures may not apply in some regions or countries.

The symbols used in this section for cutting and welding / brazing operations are shown below.

PIIA0149E

 Front pillar butt joint can be determined anywhere within shaded area as shown in the figure. The best location for the butt joint is at position A due to the construction of the vehicle. Refer to the front pillar section.

PIIA0151E

- Mark cutting lines.
 A: Cut position of outer pillar
 B: Cut position of inner pillar
- 2. Align cutting line with notch on jig. Clamp jig to pillar.
- 3. Cut outer pillar along groove of jig. (At position A)
- 4. Remove jig and cut remaining portions.
- 5. Cut inner pillar at position B in same manner.

HOODLEDGE

• Work after radiator core support has been removed.

А

FRONT PILLAR

• Work after rear hoodledge reinforcement has been removed.
