### Special Service Tool

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

<table>
<thead>
<tr>
<th>Tool number (Kent-Moore No.)</th>
<th>Tool name</th>
<th>Description</th>
</tr>
</thead>
</table>
| KV10114400 (J38365)         | Heated oxygen sensor wrench | Loosening or tightening rear heated oxygen sensor  
|                              |           | a: 22 mm (0.87 in) |

### Commercial Service Tool

<table>
<thead>
<tr>
<th>Tool name</th>
<th>Description</th>
</tr>
</thead>
</table>
| (J-43897-18) (J-43897-12) Oxygen sensor thread cleaner | Reconditioning the exhaust system threads before installing a new oxygen sensor. Use with anti-seize lubricant shown in Commercial Service Tools.  
a: J-43897-18 18mm diameter, for Zirconia Oxygen Sensor  
b: J-43897-12 12mm diameter, for Titania Oxygen Sensor |

Amy488  

Anti-seize lubricant Permatex® 133AR or equivalent meeting MIL specification MIL-A-907  

Amy489  

Lubricating oxygen sensor thread cleaning tool when reconditioning exhaust system threads.
Removal and Installation

**CAUTION:**
- When removing accelerator wire, make a mark to indicate lock nut's initial position.
- Check that throttle valve opens fully when accelerator pedal is fully depressed. Also check that it returns to idle position when pedal is released.
- Check accelerator control parts for improper contact with any adjacent parts.
- When connecting accelerator wire, be careful not to twist or scratch its inner wire.
- Refer to [EL-170](#) (“AUTOMATIC SPEED CONTROL DEVICE”) for ASCD wire adjustment.

**NOTE:**
Adjust accelerator wire with the engine warmed up to normal operating temperature and ignition switch turned to OFF.
1. Loosen lock nut, and tighten adjusting nut until throttle drum starts to move.
2. From that position, turn back adjusting nut 1.5 to 2 turns, and secure lock nut.
WARNING:
When replacing fuel line parts, be sure to observe the following:
- Put a “CAUTION: INFLAMMABLE” sign in workshop.
- Do not smoke while servicing fuel system. Keep open flames and sparks away from work area.
- Be sure to furnish the workshop with a CO₂ fire extinguisher.

CAUTION:
- Before removing fuel line parts, carry out the following procedures:
  a) Put drained fuel in an explosion-proof container and put lid on securely.
  b) Release fuel pressure from fuel line. Refer to \textbf{MA-20} (KA24DE engine) or \textbf{MA-26} (VG33E engine) (“Changing Fuel Filter”).
  c) Disconnect battery ground cable.
  - Always replace O-ring with a new one.
  - Do not kink or twist hoses and tubes when installed.
  - Do not tighten hose clamps excessively to avoid damaging hoses.
  - When installing fuel check valve, be careful of its designated direction. Refer to \textbf{EC-34} (“EVAPORATIVE EMISSION SYSTEM”).
  - After installation, run engine and check for fuel leaks at connections.
1. Release fuel pressure from fuel line. Refer to MA-20 (KA24DE engine) or MA-29 (VG33E engine) (“Changing Fuel Filter”).
2. Disconnect battery ground cable.
3. Remove back seat bottom. Refer to BT-38.
4. Remove inspection hole cover located under rear seat.
5. Drain fuel from fuel tank.
6. Disconnect electrical connectors.
7. Remove filler protector.
8. Remove the quick connectors as follows.
   1) Put mating marks on the connectors for correct installation.
   2) Hold the sides of the connector, push in tabs, and pull out the tube inserted in the retainer.
   **CAUTION:** The tube can be removed when the push in tabs are completely depressed. Do not use any tools to remove the quick connector.
10. Remove fuel tank protector.
11. Remove fuel tank mounting bolts while supporting fuel tank.
12. Remove fuel tank.
To install, reverse the removal procedure. Connect the quick connectors as follows.
- Align push in tabs with retainer openings.
- Insert tube into the center of the connector until you hear a click.

After connecting quick connectors, make sure the connection is firmly made using the following method.
- Pull on the fuel tube and connector to make sure they are firmly connected.
- Start the engine, increase engine speed and verify that there are no leaks.

FUEL PUMP AND GAUGE

| SEC. 172 | 2.0 – 2.5 (0.20 – 0.26, 17.4 – 22.6) |

\[\text{N-m (kg-m, in-lb)}\]
1. Remove fuel tank. Refer to "FUEL TANK", FE-5.
   • For removal of quick connectors, refer to step 6 of "FUEL TANK", FE-5.
2. Remove the six screws.
3. Remove fuel level sensor retainer and fuel level sensor.
4. Remove fuel pump with bracket while lifting the pawl of the fuel pump bracket upward.
5. Remove fuel level sensor assembly.
   Installation procedure is the reverse order of removal.
   • Install fuel level sensor as shown.
   CAUTION:
   • Tighten bolts to specified torque.
     \[ \tau : 2.0 - 2.5 \, \text{N-m} \, (0.20 - 0.26 \, \text{kg-m}, \, 17.4 - 22.6 \, \text{in-lb}) \]
   • Always replace O-ring with a new one.
   • After installation, run engine and check for leaks at connections.
CAUTION:
● Always replace exhaust gaskets with new ones when reassembling.
● With engine running, check all tube connections for exhaust gas leaks, and entire system for unusual noises.
● Check to ensure that mounting brackets and mounting insulators are installed properly and free from undue stress. Improper installation could result in excessive noise or vibration.
● Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.
● Do not overtorque the oxygen sensor. Doing so may cause damage to the oxygen sensor, resulting in the MIL coming on.
EXHAUST SYSTEM

Removal and Installation (Cont’d)

VG33E Models

Except California
SEC. 200

1. Gasket-
2. Front tube
3. Rear heated oxygen sensor
4. Gasket
5. Mounting rubber
6. Clamp
7. Mounting bracket
8. Center muffler
9. Rear muffler
