Congratulations and thank you for choosing Hatsan ESCORT pump action shotgun. For latest improvements or changes on your pump action model or for accessories that can be used with your pump action model please visit website www.hatsan.com.tr

WARNING!
READ THIS INSTRUCTION MANUAL VERY CAREFULLY BEFORE HANDLING AND USING THIS FIREARM. FAILURE TO DO SO MAY RESULT IN SERIOUS INJURY OR DEATH TO YOU OR BYSTANDERS. DO NOT ATTEMPT TO LOAD OR USE THE FIREARM UNTIL YOU READ AND UNDERSTAND THE INFORMATION CONTAINED THIS OWNER'S MANUAL.

Always keep this manual with your firearm. Make sure you understand all the operation instructions, safety procedures and warnings in this manual before you handle the firearm. If you sell, lend or give the firearm to another person, make sure this manual goes with it.

WARNING!
ALWAYS KEEP YOUR FINGER OUTSIDE THE TRIGGER GUARD AND ENSURE THAT THE SAFETY IS FULLY ENGAGED UNTIL YOU ARE SURE THAT YOU ARE READY TO FIRE. SAFETY IS “ON” WHEN THE SAFETY BUTTON IS PUSHED ALL THE WAY TO THE RIGHT AND RED RING IS NOT VISIBLE ON THE LEFT SIDE OF THE TRIGGER GUARD. WHEN RED RING IS VISIBLE , THE SAFETY IS “OFF” AND THE GUN IS READY TO FIRE.

SAFETY MEASURES:
• Keep your fingers away from the muzzle. Never pull a gun toward you by the muzzle.
• Always point the firearm in a safe direction even though it may be unloaded. Do not point the gun at anything you do not intend to shoot. Avoid all horseplay while handling a gun.
• When handling your firearm, never allow fingers or any object to touch the trigger until you are ready to shoot.
• Keep the safety *ON* unless you are actually ready to fire. Treat every gun with respect and caution.
• Be sure the barrel is clear of obstructions, including dirt, snow or water.
• Always treat every gun as if it were loaded.
• Keep the guns unloaded when not in use and never load your gun if you do not intend to shoot it.
• Always aim at a safe target, taking care that it does not conceal any other object. Be sure of your target before you pull the trigger. Never shoot at sounds, at a flat surface or water. Do not fire at a target, which allows ricochets or deflections.
• Store guns and ammunition separately, beyond the reach of children, under lock and key. Guns should always be unloaded when stored.
• Never carry a loaded gun inside a vehicle, house, camp or public place. When transporting the gun keep the gun safety "ON" and unloaded. Never climb a tree or fence, or jump a ditch with a loaded gun.
• Never rely on anyone's words that the safety is "ON" or unloaded. Always check to see if the safety is "ON" and unloaded when getting it from another person or storage.
• Avoid alcoholic beverages or drugs before or during shooting.
• Always use eye & hearing protection and make sure bystanders are similarly protected.
• Although the actual firearm does not contain any lead, it fires ammunition containing lead or lead compounds, which are known to be dangerous for health. Anyone who shoots the firearm, stands near the firearm shooter, or cleans the firearm should take protective health measures. Avoid exposure to lead while handling and wash your hands after contact. Proper air ventilation is absolutely necessary when shooting indoors.
• Any damage, malfunction, injury or death resulting from the use of faulty, non-standard, remanufactured, hand loaded or reloaded ammunition is the responsibility of the user. The user is solely responsible for the damage, injuries or death resulting from carelessness or misuse of the firearm.

- **G** Magazine cap
- **H** Action bar
**EXTERNAL CONTROL PARTS**

(*Right* and *Left* refer to the gun as seen by a shooter holding it in the firing position)

**Cross Button Safety:**
Located behind the trigger on the trigger housing.
When the red ring around it is visible, it means that the cross button safety is disengaged "OFF" and firearm is ready to fire. *(1A)*
To engage the cross button safety, push it until the red ring disappears and it moves no longer to the safety position.
Now the safety is "ON", trigger cannot be pulled and the firearm cannot be fired. *(1B)*

**WARNING !**
1. Always keep the cross button safety ON (hereinafter will be referred as only "safety ON") until you are actually ready to fire and the muzzle is pointing at the target.
2. Make sure that you understand how all controls work before you attempt to load the firearm.
3. Keep the muzzle pointed in a safe direction and your finger off the trigger when operating the safety. Malfunctions which may cause a gun to fire is engaged or disengaged are rare but can happen. Even if an accidental firing should occur, nobody will be hurt if you follow this rule.

**THREE THINGS TO REMEMBER ABOUT SAFETIES**
1. NEVER TOTALLY DEPEND ON A MECHANICAL SAFETY. It is not a substitute for proper gun handling. Like all mechanical devices the safety is subject to breakage or malfunction and can be defeated by wear, abuse, dirt, corrosion, incorrect assembly of the firearm, improper adjustment or repair, or lack of maintenance.
2. NO MECHANICAL SAFETY IS "CHILDPROOF" OR "FOOLPROOF". No safety ever invented can be relied upon to prevent an accidental shooting by a determined child or a grownup idiot "playing" with a gun.
3. TREAT EVERY GUN AS IF YOU EXPECT ITS MECHANICAL SAFETY NOT TO WORK. You will be astounded at how cautious you become, and how little tolerance you will have for the complacency of others.

**Action Release Control:**
The action lock lever is located on the left side of the trigger housing just rearward of the trigger guard.
The action lock lever allows the action to be unlocked and opened for inspection or unloading without pulling the trigger. The action may be opened by depressing the lever and pulling the forearm rearward. *(2)*

**NOTE:** During firing, the action unlocks automatically after the hammer falls and the action can be cycled without depressing the action lever.
Carrier:
Located on the underside of the receiver, in front of the trigger guard. Carrier is pushed into the receiver for loading the firearm.

Trigger:
Located in the trigger guard. When the firearm is loaded, the safety disengaged, and the trigger pulled, firearm will fire.

Magazine Cap:
Located in front of the forearm and under the barrel. It is screwed (clock-wise) over the magazine tube to keep the forearm and barrel properly in place.

ASSEMBLY INSTRUCTIONS

Your new Escort pump action shotgun is packed dismounted in its box, i.e. barrel is separated from the stock-receiver-forearm assembly. To attach the barrel, first remove all parts from the plastic bags. Before proceeding with the assembly of the firearm, carefully check the "Nomenclature" and read "Safety Measures" sections.

WARNING!
Before assembling the gun, check the barrel. Bore and cartridge chamber must be clean and there should no obstructions in them.

Assemble the gun as follows:
• Unscrew the magazine cap (counter-clockwise) and remove it from the magazine tube. (3)
• Insert the barrel extension into the receiver. While doing this, be sure the barrel extension seats between the bolt and the receiver and barrel port ring is aligned with the magazine tube. Continue to slide the barrel into the receiver until the barrel extension seats completely inside the receiver. (4)
• Screw the magazine cap (clock-wise) so that the forearm and barrel are held properly in place.

The firearm is now assembled and ready for use.

Migratory Waterfowl Plug (for Escort FieldHunters only)
Federal law limits a repeating shotgun to three cartridges when used for migratory waterfowl. To install the migratory waterfowl plug included with your Escort shotgun,
• Unscrew the magazine cap.
• Insert the polymer rod, making sure the head is centered in the end of the magazine tube.
• Replace the magazine cap.
To remove the plug, reverse the procedure above.

WARNING!

IF
1. Bolt does not slide forward
2. There is a gap between fore-end and receiver
3. Barrel extension protrudes from the receiver,
that means you have not assembled the firearm properly. In such a case, immediately reverse assembly procedures and re-assemble your firearm making sure that the barrel is completely inserted into the receiver, fore-end is completely in place and there are no gaps. If you still cannot assemble the gun properly take it to a qualified gunsmith for help.

**After you assembled your firearm or if you are taking it to a gunsmith for help, make sure that you keep the safety "ON".

NOTE: To disassemble the firearm, reverse the above assembly procedure. To disassemble the bolt; slide the bolt and the action bar forward and remove them from the magazine tube-receiver assembly after the barrel is removed. While doing this, be careful since the bolt may fall from the action bar. Therefore keep the bolt up during this operation. Then the bolt can be easily removed from the action bar with your hand.
LOADING THE FIREARM

WARNING!

• Always keep your fingers away from the trigger if you do not intend to fire.
• Always check cartridge chamber, magazine tube and receiver to see that the firearm is not already loaded.
• After you load the firearm, always point the barrel in a safe direction before you aim at your safe intended target.
• Always use the correct ammo for which your firearm is chambered. Your ESCORT pump action shotgun is chambered for 3" (76mm), and is capable of firing 3" (76mm) and 2 ¾" (70mm) shot shells.
• Always keep the safety 'ON' while loading your firearm.

Load the firearm as follows:
• Put the safety ‘ON’ if it is disengaged. (1B)
• Pull the forearm fully backwards and insert the first round through the ejection port into the cartridge chamber. (5)
• Turn the firearm upside down so that the trigger is facing you. By depressing the carrier, insert up to 10 cartridges into the magazine tube until the last cartridge engages the stop tooth. (6)

WARNING!
FIREARM IS NOW LOADED AND READY TO BE FIRED.

To fire; aim at your intended safe target, disengage safety and pull the trigger. (first see Firing section) After firing cartridge, the forearm should be pulled fully backwards to feed the next round from the magazine tube to the cartridge chamber. When the last round is fired no cartridge will be fed from the magazine tube, but never rely on this and check the cartridge chamber and magazine tube to assure that they are empty

FIRING THE FIREARM

WARNING!

• When pumping and firing, keep your fingers and other objects away from the path of the bolt since it moves back and forward with considerable force and velocity.
• Keep the safety ‘ON’ until you are actually ready to fire and aimed at your safe intended target.
• You need to pump the firearm each time you fire to feed the next round from the magazine tube to the cartridge chamber.

Fire with your firearm as follows:
• Engage safety and load your firearm. (see Loading section)
• Pump the firearm by pulling the forearm fully backwards.
• Wear eye and ear protection, and aim at your safe intended target.
• Disengage safety and get ready for shooting.
• Press the trigger and the gun will fire.
• To fire the next round, pump the firearm by grasping the forearm and pulling it fully backwards, so the next round is fed to the cartridge chamber.

It is not uncommon while loading or firing any pump action firearm to experience a malfunction in which an unfired or fired cartridge case becomes jammed between the bolt and the barrel. Clear such a stoppage as follows. Point the muzzle in a safe direction. Put the safety "ON". If possible, engage the action release control button to prevent the next cartridge in the magazine from being released and adding to the jam. Pull back the bolt and hold or lock it to the rear. The jammed cartridge or case can then be removed by shaking it out, or picking it out with your fingers.
**WARNING!**

If the trigger is pulled and a "click" is heard but a chambered cartridge fails to fire, follow the below instruction.
1. Point the firearm in a safe direction.
2. Engage safety.
3. Wait 30 seconds.
4. Eject the cartridge from the chamber by pressing the action release button and by pulling the fore-end backward. Examine the cartridge primer. If it has been deeply indented by the firing pin, the cartridge is defective. If it has been indented lightly or not at all, rechamber the cartridge and try again.
5. If still it does not fire, unload the gun and take it to a qualified gunsmith.

- When you are firing, if you notice that the sound of any cartridge is considerably louder or softer than the previous one, stop firing and do not load the firearm anymore. In such a case, follow the below instruction.
  1. Point the firearm in a safe direction.
  2. Engage safety.
  3. Follow the instructions in the "unloading section" and unload the firearm completely.
  4. With the firearm unloaded, check the barrel for blockage or damage. If you notice any damage or malfunction in the firearm take it to a qualified gunsmith.

**USE OF THE "CHOKES" (for ESCORT FieldHunters only)**

There are 3 different screw-in (inner) chokes that are packed with your firearm.
- F (Full / )
- M (Modified /// )
- IC (Improved Cylinder /// )

All screw-in (inner) chokes have one, two, three, four or five notches, which indicate the type of the screw-in choke, i.e. F choke has one, M has three and IC has four notches. Please also check the markings on chokes.

Improved Modified (IM), Cylinder-Skeet and turkey chokes are offered as accessories. Please contact Legacy Sports International (www.legacysport.com) for accessory choke tubes.

Note: F, IM, M, IC and Cyl-Skeet choke tubes are good for steel shot.

Turkey choke tube is for lead shot only!

<table>
<thead>
<tr>
<th>Choke</th>
<th>Constriction (12 Gauge)</th>
<th>Pattern Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cylinder-Skeet</td>
<td>0-0.005&quot; (0-0.12 mm)</td>
<td>40% - 53%</td>
</tr>
<tr>
<td>Improved Cylinder</td>
<td>0.010&quot; (0.25 mm)</td>
<td>57%</td>

<tr>
<td>Full</td>
<td>0.040&quot; (1.0 mm)</td>
<td>75%</td>
</tr>
</tbody>
</table>

Above table shows the constriction & pattern percentage versus inner chokes. Pattern percentages are taken at a distance of 36.5 meters (40 yards). The number of pellets striking within a 76mm (30 inch) circle, drawn so as to encompass as many pellet holes as possible, is counted and compared with the number of pellets contained in an identical unfired shell. The result is expressed as a percentage.

As can be seen from above table Full inner choke has the most accuracy and accuracy decreases from Full to Cyl-Skeet inner choke which has the least accuracy. Expansion of the shot pellets within a distance is the least in Full inner choke and it is the most in Cylinder-Skeet inner choke.
Fixed Cylinder Bore Choke
Fixed Cylinder Bore Choke means the choke constriction is pre-machined into the barrel at the
factory. No choke adjustments can be made and no interchangeable chokes can be put.
18" (46cm) and 20" (50cm) barrel Escort AimGuard pump action models are produced with this
choke system as standard.

Turkey Choke:
Turkey choke tubes are also available which are specially designed for turkey hunting.
Escort FieldHunter 24" (61cm) barrel pump actions are designed for turkey hunting and they are
equipped with additional turkey choke tube.
NOTE: turkey choke tubes are for lead shot only!

WARNING !
• Make sure the firearm is unloaded and the safety "ON" before you assemble / disassemble
the chokes.
• Under safety conditions (cartridge chamber empty, receiver empty, magazine tube empty,
safety engaged), check whether the choke worked loose during use. In such a case, the choke
must be tightened, by means of choke wrench, to the end again.
• Keep the chokes clean.
• Do not fire the gun without a choke installed; it will damage the barrel threads.

Assembly & Disassembly of the screw-in chokes:
• Take one of the screw-in chokes of your choice. Place it inside the barrel and by means of choke
wrench, screw it (clockwise) to the end until it is completely tightened.
• To disassemble, unscrew (counter-clockwise) by means of choke wrench and remove it.

UNLOADING

WARNING !
• Firearm is loaded and ready to fire. Keep your fingers off the trigger and keep the safety ON.
• During unloading, never allow fingers or any object to contact the trigger. Keep the muzzle
pointed in a safe direction at all times.

Unload your firearm as follows;
• Unload your firearm as follows;
• Point the firearm in a safe direction and engage the safety. (1)
• Depress the action release control button (2) and pull the forearm rearward, slowly, until the live
round is completely withdrawn from the chamber and visible in the ejection port, and then remove it.
• Continue pulling the forearm rearward to release the next round onto the carrier. Turn the firearm so
that ejection port faces downwards to allow the released round to drop out through the ejection port.
• Push the forearm completely forward, closing the bolt without a shell being chambered.
• To eject the cartridges from the magazine tube, turn the firearm over so the trigger guard is upward
and the firearm remains pointed in a safe direction. With one of your hand depress the carrier. With
your other hand slowly pull the forearm until you feel that the carrier stays depressed at the bottom
by itself. (8)
Then remove your hand that you depressed the carrier and pull the forearm fully rearwards to eject
the cartridge from magazine tube. (9)
Repeat this procedure until no more cartridges are ejected from the magazine tube.
• When no more cartridges are ejected from the magazine tube, visually check to assure the
magazine tube and receiver are empty, and pull the forearm rearward enough to see and make sure
CARE, CLEANING AND LUBRICATION

WARNING!
Before cleaning or lubricating the firearm make sure it is unloaded and the safety 'ON'.

Disassemble, clean and lubricate the firearm when grease, dirt or powder fouling accumulates in the barrel and action. To avoid rust and corrosion, clean and lubricate after each use.

Materials and equipment necessary for cleaning and lubrication:
- Cleaning rod
- Cotton bore patches
- Brass bore brush
- Powder solvent
- Small soft brush
- Good quality gun oil

• After use, to remove any powder and lead residue in the bore, scrub the barrel and chamber using the bore brush with powder solvent. Then swab the bore and the chamber with gun oiled cotton patches to protect from rust and corrosion.
• After a high number of shots (about 500 shots), disassemble the bolt assembly and clean it with a soft brush and gun oil. Then dry it carefully with a soft cloth and oil the parts lightly.
• Clean the outside of the magazine tube with a gun oiled soft cloth and then dry it with a soft cloth and oil the parts lightly.
• Any powder on the chamber, barrel, etc. can be cleaned with a brush and powder solvent.
• All external surfaces should be wiped down with light coat of rust preventative.
• Avoid using too much solvent for bore cleaning, since prolonged contact may damage the finish of the gun. Make sure to wipe away all the excess solvent and lubricant.
