

GuitarFX DSP Pedal Boards

GuitarFX

BassFX

AcoustiFX

Product Description

Alesis GuitarFX digital effects processors offer the power of many effects pedals in one. With up to 80 editable presets, 40 effect algorithms, and 9 effect modules, a wide variety of effect combinations are possible.

All GuitarFX pedals feature two multifunctional footswitches, LED readout, 1/4" TRS stereo line/headphone output, expression pedal input, battery compartment, and chromatic tuner.

Positioning

The Alesis GuitarFX series offers powerful multi-effects processing for guitar, bass, and acoustic instruments in a compact package in the same price range as a single-function pedal.

Applications

Alesis GuitarFX pedals are perfect for stage, studio, and practice. On stage, performers can get the processing power of many pedals in one compact unit—without the additional cost and unwieldiness. A variety of great sounds and stereo line out makes GuitarFX valuable in recording, and a headphone output and battery operation are convenient for practicing.

Key Features and Benefits

- 1) 28-bit effects processing
 - High-quality effects algorithms
 - Huge variety of great-sounding effect combinations
- 2) Durable, compact design
 - Fits easily on stage
 - Extremely portable
 - Battery or 9V DC power
- 3) Simple, powerful operation
 - Easily edit and store presets, or restore factory defaults
 - Two multifunctional foot switches for preset selection, tuner activation, and bypass
- 4) Built-in auto chromatic tuner
 - Ability to mute output
- 5) Expression pedal input
 - Allows fluid control of effect parameters
