

ALESIS GRIP Sub-Bass Management System

Product Overview

Product Description

The Alesis GRIP is a sub-harmonic synthesizer that adds deep bass to stereo signals. Unlike an EQ, which indiscriminately boosts bass frequencies that may be loud enough already, the GRIP automatically analyzes the bass content of the music, and then re-synthesizes the low end to harmonically match—even creating new frequencies where none existed before. The result is full, clear bass—never muddle.

Three 16-segment LED meters provide details on input level, gain reduction, and bass level. A separate crossover output allows direct connection to a subwoofer.

Positioning

The Alesis GRIP is an easy, powerful, and affordable way to increase bass frequencies in a way that harmonically matches the music, as well as manage bass for optimal speaker amplification.

Applications

The GRIP is the perfect bass management system for DJs, dance club setups, large PA systems, car audio, home theater systems, and bass guitar rigs.

Key Features and Benefits

- 1) Sub-harmonic synthesis with proprietary digital algorithm
 - Intelligently improves low-frequency content
 - Adds deep sub-bass
- 2) “Bass Drive” knob provides control of threshold and release time of multiband limiters
 - Turn up for more sustain
 - Turn down for tight, punchy lows
- 3) Balanced inputs and outputs
 - 1/4” TRS stereo inputs
 - 1/4 TRS stereo outputs
 - Mono crossover output for direct sub-bass output to subwoofer
- 4) Crossover controls and output
 - Adjust frequency at which bass processing begins
 - Crossover button removes bass from stereo outs

Dimensions and Weight

W x H x D: 19” x 1.75” x 6.38”
(483mm x 45mm x 162mm)
4.0 lbs. (1.8 kg)
