

ALESIS

Photon X49 Product Overview

Product Description

*49 Key Velocity Sensitive USB/MIDI
Keyboard Controller with XYZ Dome*

The X49 is the next step in keyboard controllers. Every button, slider, and silky smooth high-resolution endless knob is completely assignable through the intuitive user interface. After you've assigned all the knobs, you can store all your presets so you don't have to reinvent the wheel every time you turn on the controller. You'll be impressed by the smooth, fast, and very responsive keyboard that even responds to release velocity as well.

Once you play with our XYZ dome, you'll wonder how you ever got along without it. You can assign the dome to control all kinds of parameters like filter, resonance, and pitch with the

wave of your hand over the keyboard. The infrared beam tracks your hand movements in three dimensions, so you'll have a whole new level of control over your hardware and software.

Finally, the 10-key keypad, high-resolution LCD screen, and dedicated transport buttons mean you'll never waste time "mousing" around your computer while recording your ideas.

You'll go from idea to finished song faster and your music will sound better as a result.

Pricing

MSRP: \$499.00
