ALESIS UNVEILS FUSION 6HD/8HD WORKSTATIONS -Powerful, Professional Music Production Center-

Cumberland, RI, Jan 20, 2005 – The Fusion 6HD/8HD Workstations from Alesis are powerhouse products containing four synthesizers, an eight-channel hard disk recorder, built-in sampler, effects processor and expandable RAM possibilities, all offered in one sleek package. Powered by a Coldfire processor surrounded by seven high-performance DSPs, the Fusion is the only synth workstation with integrated 8-channel 24-bit recording capability. Available in two models -- the 16 note semi-weighted 6HD and the full sized 88-note fully-weighted 8HD -- this production center is ideal for the professional project studio or live performance applications.

The Fusion series is the only workstation of its kind that can save and load programs off of a hard disk (or the removable Compact Flash memory), so users can store sounds on the internal disk and always have their programs available. Users never have to load samples off a slow CD-ROM or floppy disk again.

Additional features include; direct CD-R burning, fully assignable buttons and 360-degree knobs for total control of synth parameters, 32 track MIDI sequencer, fully programmable arpeggiator and internal memory expandable from 64MB to 192MB.

Available Q2 of 2005.

Alesis manufactures a full line of professional audio and musical instrument products capitalizing on its strengths in digital, analog, semiconductor, and transducer technologies. Alesis delivers revolutionary product solutions to the music and audio production industries. For more information, visit www.alesis.com.
