

## KEY FEATURES

Patent # US D437, 827 S

- Compact enclosure
- Mounts into tabletop
- Offers single input plate
- Opens/closes by tilting top panel
- Multi-media & AC power connectors
- All signals pass-through to the underside of the table

## DESCRIPTION

The Tilt 'N Plug Jr.™, model TNP121, is one member of a family of compact interconnect solutions designed for installation into a table in a presentation system. The TNP121 provides access to computer video, audio, network, telephone and AC power connections when they are needed and hides them when they are not needed.

The input plate on the TNP121 is accessed by lifting the top panel from its front lip. This tilts the input plate into view with help from a pneumatic spring inside the unit. Once opened, the input plate remains securely in place. The input plate is hidden by pressing down on the top panel, which closes the lid. In its closed position, the top panel lies flush with the table top.

The TNP121 provides a single input plate with Computer Video (15-pin HD), Computer Audio (Stereo Mini), Modem (RJ11), and Network (RJ45) input connections. It also provides an AC Power connection suitable for use throughout the U.S. and Canada.

All signals are passed through the unit with connection to the AV system being made under the table. No signal processing or buffering takes place.

Designed for use with tables ranging from one to three inches thick, the TNP121 uses retaining brackets under the table to secure the unit flush with the surface. The TNP121 comes standard in a matte black color.
