

KEY FEATURES

Patent # US D437, 827 S

- Special circular bezel allows angled positions
- Compact enclosure
- Offers single input plate
- Opens/closes by tilting top panel
- Multi-media & AC power connectors
- All signals pass-through to the underside of the table

DESCRIPTION

The Tilt 'N Plug Jr.™ with Circular Bezel, model TNPI31, is one member of a family of compact interconnect solutions designed for installation into a table in a presentation system. The TNPI31 provides access to computer video, audio, network, telephone and AC power connections when they are needed and hides them when they are not needed.

The TNPI31 is unique in that it utilizes a circular bezel. This enables it to be placed at unusual angles in a table. It also makes for an easier table cutout in some applications.

The input plate on the TNPI31 is accessed by lifting the top panel from its front lip. This tilts the input plate

into view with help from a pneumatic spring inside the unit. Once opened, the input plate remains securely in place. The input plate is hidden by pressing down on the top panel, which closes the lid. In its closed position, the top panel lies flush with the table top.

The TNPI31 provides a single input plate with Computer Video (15-pin HD), Computer Audio (Stereo Mini), Modem (RJ11), and Network (RJ45) input connections. It also provides an AC Power connection suitable for use throughout the U.S. and Canada.

All signals are passed through the unit with connection to the AV system being made under the table. No signal processing or buffering takes place.
