With dozens of zones possible, the Dynacord® ProAnnounce System® puts music and messages right where you want them.

Whether it's two zones or a hundred, an office building or a multi-level mall, the ProAnnounce System® simplifies the delivery of flexible, "no limit" distributed audio solutions to your commercial sound customers. Start with the complete set of ProAnnounce components, add Electro-Voice® Paging Horns and EVID™

loudspeakers, and you've built a digital matrix paging and background music system that sounds great in any size application. You also get full EV® design and technical support with every component. So why limit yourself? Expand your paging and background music system business with the ProAnnounce System.

ProAnnounce™ paging & background music — SYSTEM COMPONENTS — from the microphone to the speaker!

DIGITAL MATRIX CPUs

DPM4000 4-in/4-out digital audio matrix is the system's nerve center. Manages up to 16 paging stations, more than 150 control I/O lines, and 100 zones. Easily configured with a large number of programmable functions and modular interface cards. DRM4000 is an 8x2 matrix router that extends the DPM4000 or operates as a stand-alone CPU.

PAGING CONSOLES

Microprocessor-controlled consoles can be programmed to control zones, groups, priorities, program assignments, volume levels, and many other functions. Self-monitoring for fail-safe operation. Four consoles sizes with tactile feedback buttons, high-visibility LEDs, and two-line LCD message display, plus a 50-key expansion station. Extremely rugged with Euro-style metal enclosures for years of trouble-free operation.

REMOTE CONTROLLED POWER AMPLIFIERS

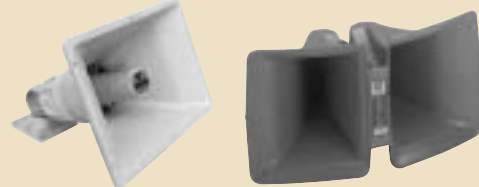

ProAnnounce amplifiers provide unprecedented failure recovery, fault tolerance, and reporting, along with superb audio quality. Amps can monitor faults and report status to the DPM4000 CPU which can seamlessly switch to backup amps. Amps are 24-volt ready for backup power operation. Models range from 100 watts to 600 watts per channel.

EVID™ PREMIUM SPEAKERS

The EVID™ loudspeaker family combines full-range music and highly intelligible voice performance with unique surface-mount and ceiling enclosure designs that look great and are easy to install. EVID speakers are the first choice for applications where sound quality really matters, as in restaurants, bars, retail spaces, and theater lobbies.

HIGH-PERFORMANCE PAGING HORNS

Based on decades of innovation and experience, Electro-Voice® paging horns deliver highly intelligible audio over large areas indoors and out. Cobreflex® folded sectoral horns eliminate high frequency phase cancellation while providing high efficiency. PA430 horns let you cover more area with fewer horns by providing a dispersion pattern that's constant over 2 kHz to 10 kHz.

EXPANSION COMPONENTS

All ProAnnounce Systems can be expanded at anytime to add zones, control digital or analog devices, enable remote monitoring and switching, and more. Expansion modules can control relays, zone switches, signal lines, system controls, and audio levels; or accept logic inputs. Modules operate as stand-alone units or as cards in the DCS400 chassis.
