ENG 618 Update

New Carbon-Fiber Boom Pole is a Hit with Network Engineers!

Effective immediately, all ENG 618 Microphones will be equipped with the Academy Award™ winning K-TEK carbon fiber boom pole. The new boom pole is constructed from high-density graphite fiber selected for maximum strength and minimum weight. Eight layers of dent-proof graphite are precision ground and then burnished to produce low handling-noise and a nonreflective finish. The extensions have a rock solid feel when tightened.

David Bull, Engineer at ABC Radio, Washington, D.C., and media advisor for the ENG 618 project, was so impressed with the new K-TEK pole he wanted to purchase our field-test unit. "The ENG 618 concept for a highly directional, integrated boom-pole shotgun microphone is right on target," says David, and now, with the new, ergonomic K-TEK boom-pole, the ENG 618 is the perfect newsgathering tool." He added, "The ENG community readily would pay more for a product of this caliber."

Purchaser's of the original ENG 618 integrated microphone, with the telescoping aluminum pole, who wish to upgrade to the new K-TEK boom pole should contact Frank Spain at 800-234-6831, ext. 736 for details.

Pricing
