## Eliminator i, ii, i Sub High-Output Stage System

### What It Is

- ▶ The Eliminator i, Eliminator ii and Eliminator i Sub allow us to hit **critical price points** for our customers. At the same time we've maintained the **performance and components of the originals.**

### Key Selling Point

- ▶ The legend lives on! Eliminator has stayed in the top five since its introduction and remains **one of the best-selling combinations** in the music industry.

### Who's Interested?

- ▶ **DJs** who need to keep their system compact, but still need punch.
- ▶ **Bands** who need a portable system or want to supplement a house system. Excellent rehearsal PA too!
- ▶ **Acoustic acts.** Just ask the California Guitar Trio!

### No-Bull Benefits

- ▶ Designed so that **one amp drives a complete matched system**, both tops and subs
- ▶ Runs in **bi-amped or full-range passive** mode
- ▶ **Easy setup** with minimum number of cables and system components
- ▶ RMD™ means **clean, accurate reproduction** of voice and instruments

### Frequently Asked Questions

- ▶ **Q:** "What is the difference between this and the original Eliminator?" **A:** We found ways to reduce costs for the build process, cabinet and grille. Expect the same great performance!
- ▶ **Q:** "You didn't change any components?" **A:** Nope. We're EV. We're proud of our loudspeaker technology.
- ▶ **Q:** "I've heard there's an Eliminator i amp. What's that about?" **A:** Word spreads quickly! The Eliminator i amp is tuned to pull every ounce of

performance from the Eliminator i and the Eliminator i Sub. Works just fine with the originals too: The box frequencies didn't change. At EV we're thinking more about how things work together. That's how we came up with the Eliminator i amp. We've developed a complete component system that will outperform anything like it on the planet!

### Competition

- ▶ **Peavey, Yamaha, JBL.** But you know Eliminators sound better in any given application.

### Use With These Fine EV Products

- ▶ The Eliminator i amp will be arriving in August with state-of-the-art innovative signal processing for the Eliminator family of products. Connect this puppy to your Eliminator i loudspeaker system and stand back! We put a daughterboard in it that's specifically tuned for Eliminators. The performance is fantastic. The low-end output is stunning! It's great for DJ and rock applications. We've given you more of what you need without adding to the number of pieces you have to lug around.
- ▶ If you do use the Eliminator i without the i Sub, be sure to put each one up on a 100BK. You'll want them to project past the dance pit.
