

EV *Eliminator*

More Bass Slam and Vocal Projection than any other single-amp PA on the planet.

Eliminator™ "top-box"

features a premium 15-inch woofer and titanium driver on a 608 X 408 Constant Directivity horn (EV invented the CD horn) that provides better vocal projection than wider horns that just spray sound to side walls. Plus, Ring Mode Decoupling™ technology (currently used in Metallica's EV X-Array system) gives cleaner vocals at maximum SPL.

Eliminator™ Sub "bottom box"

features a premium EV 18-inch subwoofer with a massive magnet and die-cast frame to safely handle 1,600 watts of peak power! The special "diagonal slot-load" cabinet was specifically designed to work together with the Eliminator "top box" to deliver huge bass impact and "slam." Plus, we added a built-in subwoofer crossover, so you don't need a separate electronic crossover and power amp (saves you about \$700!).

Eliminator™ Amp

takes the guesswork out of matching power amps to speakers. Delivering up to 1,700 watts of German-engineered power, the Amp features state-of-the-art dynamic limiters and a 5-way protection system specially matched to the Eliminator speakers — making it virtually impossible to "blow" the system, while boosting output 1-2 dB in "real world" conditions.

WINNER:

Music and Sound Award, Best New Speaker of the Year!

"EV's RMD™ Technology (Ring-Mode Decoupling) improves sonic integrity by allowing better control of resonant modes at varying volumes."

Pro Audio Review Magazine
January 2000

EVERYWHERE™

EV Eliminator™ System is a 3-way, concert-style "top-box/bottom-box" sound system with matching power amp that delivers "bi-amp" sound without the expense of two power amps plus electronic crossovers — to provide unprecedented value in a sound system for working DJ's and musicians.
