

## The sound of an American legend — *i* improved.

**Back in the 1970s, Electro-Voice® designed Eliminator — the first full-range loudspeaker for musicians.** That Eliminator sound defined American music performances for generations. Today, Eliminator *i*™ upgrades the legendary Eliminator sound while preserving its soul. We raided EV concert speaker hardware for the awesome DL-18MT woofer for the subs, new crossovers with Power Tracking Protection™ circuitry, a powerful new Eliminator *i* amplifier with built-in signal processing, and much more. We've also added new dual 15-inch two-way and dual 18-inch subwoofer systems with 6,800 watts of peak power capacity. **The “*i*” stands for “*i*mproved.”** But one listen will tell you it means the **Eliminator legend keeps on rocking.**
