

FORCE *i*

Thin Weight. Phat Sound.

GET BIG PERFORMANCE FROM A SOUND SYSTEM DESIGNED TO GO PLACES

Night after night, show after show, Force *i* sound systems deliver something that's hard to get from other compact speakers without paying a fortune: Phat, luscious sound with gut-kicking bass and crystal clear vocals. Just what you'd expect from Electro-Voice.

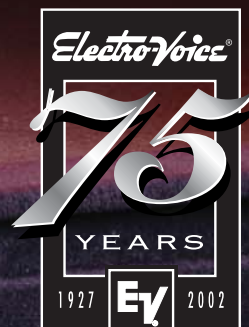

The Force *i* 15-inch two-way and 18-inch sub give you pro-quality drivers and a little magic adapted from EV concert technology called Ring-Mode Decoupling (RMD™). RMD delivers incredible sound that holds together even at high volume levels.

Since most musicians can't take a crew of roadies to every gig, we made Force *i* enclosures with lightweight, yet ultra-strong RoadWood™. With solid corner protectors and industrial-grade covering, Force *i* enclosures are ready to hit the road. The Force *i* Sub even has built-in wheels and a detachable dolly handle to make it easy to move.

To deliver the maximum performance, we've developed an amp derived from EV's concert models with a built-in processor to deliver more bass and dynamics from Force *i* speakers. You've got to hear the incredible difference it makes.

Hear the bigger-than-the box sound of Force *i* at your Electro-Voice dealer. For awesome performance in a compact size, other systems just don't stack up to Force *i*.
