

Unless you're SAFE

any Tom, Dick or Hacker
can intercept your
wireless transmissions.

Who's listening to your conversation?

While the wonders of wireless technology brought new freedom to communication, your conversations were available to whoever wanted to listen. Until now.

Now Telex offers freedom and security with its new S.A.F.E.™ encrypted wireless microphone system. The S.A.F.E. (Secure Audio Frequency Encryption) system brings airtight security to wireless transmissions of confidential information. Each and every matched S.A.F.E. system comes with its own unique security code. Not even another S.A.F.E. receiver can intercept your transmission.

When confidentiality is priority one, the S.A.F.E. system represents a breakthrough in security for wireless microphones. The S.A.F.E. system is ideal for the transmission of restricted or classified information over a wireless microphone system.

A scanner cannot intercept encrypted conversation when you're on a S.A.F.E. system, unlike other brands of wireless microphones.

Get on a secure line with the S.A.F.E. system.

For more information, contact Telex at 1-800-392-3497.

SECURE AUDIO FREQUENCY ENCRYPTION

The Only S.A.F.E.™ Wireless
Microphone System
