

Sound big, travel light.

If you need clear, full, powerful sound reinforcement—without a truckload of amps and loudspeakers—direct your ears toward Electro-Voice® SxA100 powered loudspeakers and SxA180 powered subwoofers. This dynamic duo fills a wide range of sound reinforcement applications with superb EV® pro-quality sound in a compact, lightweight, easy-to-setup package.

Simplified setup

SxA100 and SxA180 are a breeze to set up. Hardware is built into each enclosure and lets you mount the SxA100 full-range box on a pole above the SxA180 sub, or on regular speaker stands. The SxA100 can mix two mic/line level inputs, with a two-band EQ, and has a line level out for daisy-chaining speakers. The SxA180 sub features XLR in and through connectors, and a high-pass output for feeding the SxA100.

*Easy to use controls
with two-band EQ.*

Lots of applications

Because the SxA100 and SxA180 can go just about anywhere, they're used for just about every application you can think of:

- bands in small clubs
- acoustic acts in coffee houses
- mobile DJs
- business presentations
- churches
- sound system rentals
- and much more.

The SxA series also complements bigger sound systems to plug holes in coverage, provide sidefill, monitoring, and serve as a rehearsal system for bands. Whenever you need a big sound while traveling light, take along SxA100 and SxA180. For more information, call **800-667-3968**, or visit www.electrovoice.com.
