Are you suffering low clearance blues?????

Do you need to avoid blind spots in your line of site??????

Take a 2082 and you won't get called in the morning!!!!!!

We are finalizing the launch of the newest addition to the FRi line of speakers---- the **FRi-2082**.

What is it

The FRi-2082 is a two-way, dual 8-inch 200-watt low profile speaker with a 100° x 100° CD horn. It is enclosed in a low profile cabinet (only 9-inches high!!!!) with barrier strip connectors on back to ease installation. Additionally, the cabinet is **ONLY** 24.5 inches long!!!! It just goes to show that good things come in small packages.

Why do you want it

In limited clearance applications a speaker cabinet is needed that will provide full range sound but remain invisible. Other common problems solved by a low profile cabinet design are side fill applications and on stage monitors. The bulk of potential uses are entry level or near entry-level applications such as low budget Houses of Worship, Conference Rooms, Live Music Venues, and Discos. The FRi-2082 provides a low cost solution for low ceiling venues where ease of installation and restricted budgets are the norm.

Why do you want EV's FRi-2082

The FRi-2082 incorporates EV's revolutionary RMD technology into a compact low profile package that is absolutely ideal for applications where ceilings or clearances are very low. Special features include frequency-shaping circuitry to eliminate the typical effects of two 8-inch speakers working together at high frequencies (this minimizes polar lobing errors). The two woofers working together at low frequencies produce additional base and gives this speaker a remarkable fullness and low frequency extension (given its size). At higher frequencies the woofer is rolled off thus allowing excellent polar response of a conventional two-way system while still retaining all of the benefits of dual woofer design at low frequencies. All of this in a surprisingly low profile cabinet that is easy to install and hook up. In addition, a U-bracket for installation is included with each speaker.

Where can you see it ??????????

The FRi-2082 will be making its debut at the AES show in Las Angles in September.

When will it be available?????????????

We are planning to ship the first FRi-2082 speakers by December 1st.
