NEW **Sx500+ 15" 2-way Loudspeaker**

When the Sx500 was created a year and half ago, our design goal was to build a speaker whose performance would challenge the finest 15-inch two-ways available and offer additional benefits of light weight and impressive flexibility. We were happy with what we did and customers all over the world were too—and bought tens of thousands of them.

The new Sx500+ should be even more popular! It offers an even-higher level of performance—at **NO INCREASE** in price!

The new Sx500+ has:

- The EV DH2T 2-inch diameter compression driver with 240% higher power handling than the DH2010A. The DH2T has 6 dB lower second harmonic and 10 dB lower third harmonic distortion from 1,000 to 8,000 Hz for noticeably smoother sound. The improvement in sound quality and reliability (especially in demanding peak output situations) is truly noteworthy.
- An improved woofer with a stronger spider and surround for better bass punch with greater immunity to bottoming. The new woofer has a higher-grade magnet that controls the cone better for improved definition.
- The same asymmetrically oriented LF and HF horns of the original model. These horns deliver the sound where the speaker is aimed and wastes less power spraying the sound onto the ceiling and adjacent room surfaces.
- Ring-Mode Decoupling (RMD™) for incredibly pure mids and vocals. The Sx500+ maintains its high-fidelity sound quality at all listening levels thanks to RMD™.
- Incredible flexibility built-in to the enclosure. The Sx500+ can be stand-mounted, hung, flown and arrayed thanks to its molded-in inserts.

The Sx500 was an incredible value (especially when compared to ultra-expensive high-end systems) and the Sx500+ is even better! The improvement in sound quality and reliability make it worth considerably more—and we give it to you without additional cost.

If you have any questions about the Sx500+ or other EV products, please call us at 800-234-6831, e-mail us at electrovoice.com or call your local EV representative.

Best regards,

Mike Torlone
