NEW Sx80 8" 2-way Loudspeaker

The new 8-inch two-way Sx80 brings the sound quality and flexibility of EV's phenomenally successful and widely lauded System 2000 speakers to an even smaller package. For applications as wide-ranging as live sound, music playback or announcement systems, the Sx80 is the small speaker with gigantic performance.

The Sx80 has:

- 175-watts continuous, 700-watts short-term power handling. Unlike other small speakers that route a portion of amplifier power to light bulbs or other protection devices, the Sx80 can handle its rated input power unfettered.
- The EV DH2005 1.25-inch pure titanium compression driver and a 90° x 65° Constant-directivity horn with Varipath geometry. Unlike most small speakers with dome drivers, piezos or directivity control devices, the Sx80 has the muscle to really project its sound. It has excellent performance oriented horizontally or vertically.
- Ring-Mode Decoupling (RMD™) to ensure clean, detailed mids with pure, articulate vocal quality. RMD™ also keeps sound quality even at all levels.
- A trapezoidal enclosure that is available in black or white and made of high-impact polystyrene that is easily paintable.
- Inserts built into the enclosure that accommodate wall/ceiling brackets, OmniMount Series 75 hardware and a stand mount.

Combining the Sb121 or Sb121a 12-inch bass module with the Sx80 creates a small-sized, high-impact, wide-range music system. This system would work well for a variety of applications in hotel meeting room-sized areas or even larger spaces that don't need rock concert SPLs.

Description	List Price	Pro User Net	1 - 2	3 or more
Sx80 8-inch two-way, black (each)	\$318.00	\$265.00	\$177.00	\$159.00
Sx80W 8-inch two-way, white (each)	\$318.00	\$265.00	\$177.00	\$159.00
Sx80MBB Sx80 U-bracket, black	\$ 41.00	\$ 30.75		\$ 20.50
Sx80MBW Sx80 U-bracket, white	\$ 41.00	\$ 30.75		\$ 20.50
Sx80SM Sx80 pole mount kit	\$ 38.00	\$ 28.50		\$ 19.00

Even though the Sx80 is competitively unique, a tremendous value and a great problem solver, it will probably sell well just because it's so cute. It's hard to believe that we packed so much power and performance into an enclosure only slightly bigger than a shoebox that weighs only 16 lb (7.3 kg).

Try the Sx80—you'll be very impressed.

Best regards,
