LET'S CONFERENCE™
S E R V I C E S

Let's Conference

Let's Conference™ provides a wide range of tools that empower geographically dispersed people to talk, show and collaborate in natural, collaborative environments. Whether it's a simple audio conference, premium webconferencing or face-to-face videoconferencing, our Let's Conference suite of services provides the tools to fully interact with participants to ensure efficient, productive meetings. ClearOne markets its Let's Conference services directly to end users as well as through qualified resellers and agents. For more information about the Let's Conference suite of conferencing services, visit www.LetsConference.com or call 1-800 LETS MEET.

Audio Conferencing Services

Sometimes an audio conference happens spontaneously. And sometimes it involves a great deal of planning and preparation. Lets Conference™ supports both of these needs by offering reservationless calling with easy-to-use InstantAccess™ or professionally managed calls with feature-rich OperatorAssisted calling. Either way you get clean, clear connections and top-notch service and support.

INSTANTACCESS™

InstantAccess™ provides a quick and easy way for people to meet regardless of their location. With InstantAccess, you have the freedom to initiate conference calls immediately either via the phone or from our Conference Center application with its automatic audio dial-out feature — all without a reservation. InstantAccess calls are ideal for quickly bringing together a group of dispersed employees for a meeting, or for last-minute calls with key participants anywhere.

OPERATORASSISTED CALLS

OperatorAssisted calls are ideal for high-touch meetings that require extra assistance — investor relations calls, shareholder meetings, board meetings and sales proposals. With OperatorAssisted calls, you can bring together a few people or thousands. And your operator is always available to help you choose the right features to help make any call successful.

Webconferencing Services

As an integral part of our Let's Conference suite of products, our full line of webconferencing products makes it easier to hold any type of meeting with geographically dispersed participants. Let's Conference webconferencing products combine audio, visual and collaborative features to increase the productivity of any meeting or presentation.

WEBCAST™

WebCast™ is a simple, cost-effective way to reach a large dispersed audience through the web. Easy-to-access, high-impact audio and video make WebCast ideal for when you have time to plan and don't require audience collaboration.

WEBSHOW™

WebShow™ offers an affordable option for when you simply need to show a presentation and don't require full collaboration capabilities. Automatic audio dial-out and convenient access through LetsConference.com make WebShow a fast and easy solution for sharing your presentations.

WEBCOLLABORATE™

With more advanced features like multiple host control, WebCollaborate™ is a robust collaborative solution ideal for conferences that require more interactivity. Participants can share presentations, documents, applications and desktop control.

WEBPRO™

WebPro™ is a premium webconferencing product ideal for more demanding meetings that require maximum collaboration. Participants can quickly and easily share applications, web content, documents and host control. Video streaming can be included and conferences can be stored for future broadcast.

Videoconferencing Services

As an important part of the ClearOne Let's Conference suite, videoconferencing helps businesses meet demands face-to-face without spending time and money on travel. Our videoconferencing services provide top-quality, multipoint connections to support clear, easy video communications.

VIDEOPRO™

VideoPro™ is the perfect tool for meetings and presentations that require visual interaction — particularly sharing graphics or documents. Companies of all sizes can leverage the power of videoconferencing to launch new products and services to their sales forces in the field or to add impact to their training sessions to visually engage their audience.
