CONVERGE PRO 880/840T/TH20/8i SERIAL COMMAND GUIDE

CLEARONE PART NO. 800-151-882 (REVISION 1.0) September 2007

SERIAL COMMAND GUIDE

TYPE AND DEVICE IDS

Converge Pro Device Types and Device IDs by model are as follows:

Model	Device Type	Device ID Range
880	1	0-7
TH20	2	0-F
840T	3	0-7
8i	A	0-7

CONVENTIONS

This guide uses the following typographic conventions to describe Converge Pro serial command syntax:

Convention	Description
<X>	Parameters enclosed in < > indicate a mandatory parameter
[X]	Parameters enclosed in [ ] indicate an optional parameter
1-8	Parameters separated by a '-' indicate a range of allowable values
4,7,9	Parameters separated by a ',' indicate a list of allowable values
EREF	Words in UPPERCASE bold indicate command text
Device	Indicates the device type and device number on the Expansion Bus. It is composed of a device type character and a device ID character.

COMMAND FORM DESCRIPTION

The structure of serial commands is as follows:

 # <Device Type> <Device ID> <Command> [Values] <Carriage Return>

# indicates the start of a command line, the Carriage Return terminates a command.

> **NOTE**: Converge Pro serial commands can be either UPPERCASE or lowercase. Return values are always in UPPERCASE. In order for a command to be recognized by the RS-232 serial port, the command must be terminated by a carriage return.

For example, a command to disable mute for Mic 2 (input channel 2) on Converge 880 device "0" would have the command line **#10 MUTE 2 M 0**.

In this command line, 1 = the **Device Type** for Converge 880, 0 = the **Device ID** for unit 0, **MUTE** = Converge Pro serial command, 2 = MUTE command **Value** to un-mute mic channel 2, M = MUTE command **Value** that specifies a microphone input channel, 0 = MUTE command **Value** specifying that mute is OFF.

If an asterisk (*) is placed in the **Device Type** or **Device ID** fields, the command will apply to all units or all devices respectively. For example, a command with a **Device Type** = 1 and a **Device ID** = * would apply the command to all Converge 880 units. A command with a **Device Type** = * and a **Device ID** = 6 would apply the command to all Converge Pro units with a Device ID of 6.

If a command specifies "(Null to query in text)" in its **Value** table, leave a blank in the command line to query the current state of that value. For example, the command **#10 MUTE 2 M <blank>** would return the current mute state of Mic 2 on an Converge Pro 880 with a Device ID of 0.

GROUPS AND CHANNELS

All Converge Pro serial commands use common alpha and numeric designators to reference channel group, channel types, and other command values. Also, different channel groups have different allowable channel ranges, as shown in the following table.
