

WTM/STM

Wireless Tabletop Conferencing Microphone

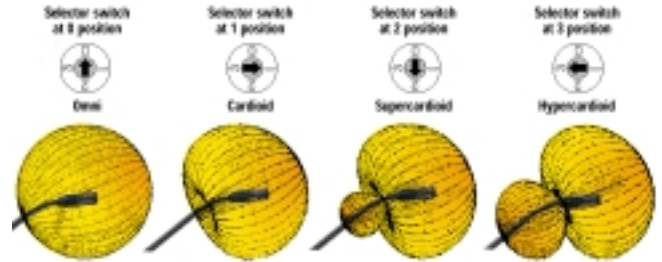

The wireless conference mic brings benefits to the boardroom, conference center or training facility.

The wireless tabletop conference mic is a free-standing gooseneck style microphone firmly anchored in place by its low-profile, elegantly designed base. Turn the base over to reveal the specially designed compartment for housing the supplied transmitter. Place the easy-to-use microphone anywhere required. **No longer do you have to drill holes in tables, trench or core floors, run long cables or compromise the architectural integrity of an installation. Also available in an audio-encrypted version for applications that require secure voice information (medical, government, high-profile corporation applications).**

Available in 5", 12" and 18" gooseneck lengths

PolarChoice™ allows the user to select from four polar patterns: omni, cardioid, supercardioid, and hypercardioid. PolarChoice™ technology assures maximum protection against system feedback and ambient background noise
