Notebook pro audio recording has never sounded so good, or been this convenient and affordable. Indigo IO offers

one **stereo 1/8 inch analog input and output** on a Type II Cardbus card powered by your notebook computer. It combines this with **24-bit/96kHz converters** for the quality you deserve. Also included is a 6 foot audio cable for RCA or 1/4 inch connections.

A unique feature of the Indigo IO is the use of "**virtual**" **outputs**. Indigo IO appears to software as if it has eight separate outputs, which are digitally mixed down to the physical outputs using Indigo IO's "console" software and its **on-board DSP**. This makes Indigo IO compatible with all popular multi-track software. And, with Echo's "**multi-client**" **drivers**, more than one application (such as an editor and a software synth) can be playing back through Indigo IO at the same time.
