

# Need a Projector Screen ?

Step 1: Determine Screen Type ( Manual, Electric, Floor, Tripod, Frame)

Step 2: Determine Screen Ratio ( 1:1, 4:3, 16:9)

Step 3: Determine Screen Size (84", 100", 113", 119", 120", 135" .....)

*Elite* **SCREENS**

## How to Select Projection Screen

### A. \$\$\$ What is your Budget

- We recommend 15-30% of your Projector Cost

### B. What Type of Screen

- Electric Screen creates a “Wow” Home Cinema Factor with remote control
- Fixed Frame screens are best for your dedicated Home Cinema Room
- Manual Screens fit your budget for any application.
- Pull Up Floor Screens conveniently set-up and are space savers
- Tripod Pull Up Screens fit any budget for portable applications

### C. What is the Screen Material

- Matte White Screen Material- Easy to Clean and

Durable for daily usage

- High Contrast Screen Material – Increases black levels when watching movie/video

### D. What is the Ratio -1:1, 4:3 or 16:9

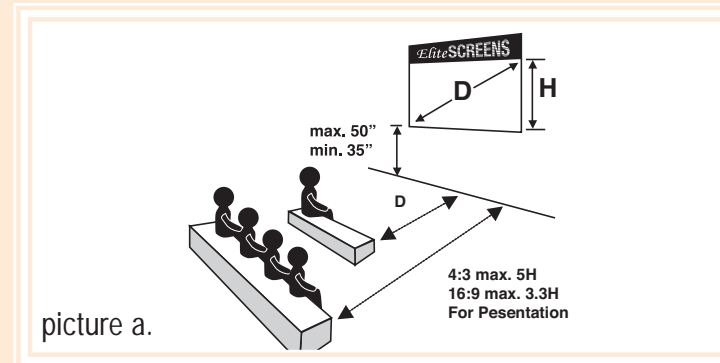

- 1:1 - Best for all applications, in Schools, Churches, or Training Rooms. We suggest using this format screen when using an OHP (Over Head Slide Projector) and Multimedia Projectors
- 4:3 - Best for Home TV / Office / Training Room: Most projectors are 4:3 format. We suggest using this format screen when using a Multimedia Projector and viewing TV/Video (NTSC) signals or Computer Presentation images
- 16:9 - Best for Home Cinema (HDTV format), recommended for native 16:9 / HDTV projectors only

### E. What is the difference between the IR and RF remote control for Electric Screen

- Infrared (IR): Requires direct aim to the IR receiver to activate the screen up/stop/down. Infrared code can be programmed into a Universal Remote Control (Limited control distance than RF)
- Radio Frequency (RF): Long distance control and no direct aim limitation for electric screens up/stop/down operation. Not compatible with Universal Remote controls (as of today)

### F. What Screen Size in your room ?

- 1-20 people : 60"-100" diagonal
- 21-50 people: 101"-120" diagonal
- 51+ people: 121"+ diagonal

We suggest the Screen Diag. should equal to the closest person in front of screen. ( see picture a.)

There are many factors to determine the size of your screen, including the room size and environment, type of application, type of projector, basically, the simple determination by "how many people watch screen at the same time" should be enough for most application. You can always select different size to fit your need as you like.
