

How to Select Projection Screen

A. \$\$\$ What is your Budget

- We recommend 15-30% of your Projector Cost

B. What Type of Screen

- Electric Screen creates a "Wow" Home Cinema Factor with remote control
- Fixed Frame screens are best for your dedicated Home Cinema Room
- Manual Screens fit your budget for any application.
- Pull Up Floor Screens conveniently set-up and are space savers
- Tripod Pull Up Screens fit any budget for portable applications

C. What is the Screen Material

- Matte White Screen Material- Easy to Clean and Durable for daily usage
- High Contrast Screen Material – Increases black levels when watching movie/video

D. What is the Ratio -1:1, 4:3 or 16:9

- 1:1 - Best for all applications, in Schools, Churches, or Training Rooms. We suggest using this format screen when using an OHP (Over Head Slide Projector) and Multimedia Projectors
- 4:3 - Best for Home TV / Office / Training Room: Most projectors are 4:3 format. We suggest using this format screen when using a Multimedia Projector and viewing TV/Video (NTSC) signals or Computer Presentation images
- 16:9 - Best for Home Cinema (HDTV format), recommended for native 16:9 / HDTV projectors only

E. What is the difference between the IR and RF remote control for Electric Screen

- Infrared (IR): Requires direct aim to the IR receiver to activate the screen up/stop/down. Infrared code can be programmed into a Universal Remote Control (Limited control distance than RF)
- Radio Frequency (RF): Long distance control and no direct aim limitation for electric screens up/stop/down operation. Not compatible with Universal Remote controls (as of today)

Top 10 Most Popular Projection Screens

We have created a top 10 screens list by application to help you chose the right screen
