

Eclipse Software Update Card Installation Procedure

Procedure:

1. Power down the Eclipse.
2. Insert the Upgrade Card into the memory card slot on the front of the Eclipse.
3. While holding down the "1" key, power on the Eclipse.
4. Wait for the programming process to be completed. If the programming has been successful, the "*Programming Completed. Cycle Power*" message will appear.
5. Power down the Eclipse.
6. Remove the Upgrade Card. The programming process is complete.

Note:

After updating to a new Eclipse operating system software version, the following screen will appear when the system is restarted for the first time:

New software - clear setup ?
< OK > < CANCEL >

Eventide recommends answering "OK" to this prompt and clearing the setup. If you wish to keep your current setup settings, press "CANCEL". Presets saved to internal memory (1 - 99) would not be erased in either case.
