Color Television Catalog

JVC's Family Theater 2000

Family Theater

Consumer electronics, particularly with respect to color television, is no longer a black and white world. Today, top quality and high performance matter to customers more than they ever have before. Again for 2000 JVC has succeeded in creating a top quality line-up of color TV products that will without question out-perform our competitors.

The Color TV Family Theater 2000 line-up addresses every possible customer concern. From the addition of XDS Auto Clock Set and a Dark Tinted CRT on all models from 13 to 36 inches, to simplifying customer connections by having Dual Tuner PIP on all PIP models, our engineers truly were thinking of everything and everyone.

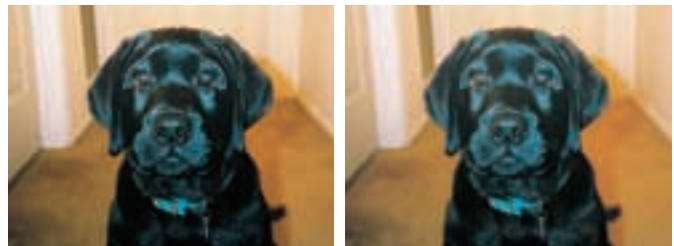

Whether you are looking for a TV/VCR combo for the kids' room, a medium sized set for the den, or a large screen for the family room, you will find what you are looking for at an affordable price in our Family Theater 2000 catalog.

Picture Features

JVC is known for having exceptional picture quality because to us it is the most important element in a high performance television. That is why every JVC TV has three vital picture and video elements that insure the picture is crisp, clear and has great contrast...

BLACK LEVEL EXPANSION

JVC's exclusive Black Level Expansion technology creates dark, rich blacks so that colors become deeper and more vivid. Our chassis designs also make for brilliant whites and a dynamic high contrast picture. Compare the sharp detail and outstanding black colors of the dog in the JVC picture to the ordinary picture.

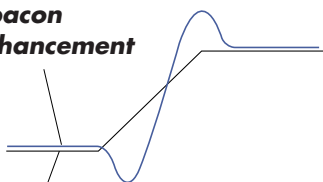

JVC Picture

Ordinary Picture

DARK TINTED PICTURE TUBE

Since picture is so important, we decided this year that every JVC television needs a dark tinted picture tube. The Dark Tinted CRT creates a much greater contrast between darks and lights over a standard CRT, and it increases the depth of the black and dark colors on the screen. (Not available on the 13 inch TV/VCR combos.)

**Apacon
Enhancement**

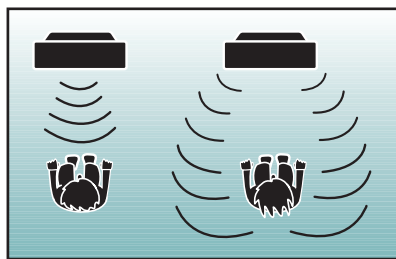

Regular

APACON

Apacon is another standard JVC feature that helps insure that every JVC TV has the exceptional picture quality for which JVC is known. Apacon is a circuit that enhances picture sharpness by sharpening the transitions between dark and bright, by adding preshoot and overshoot, and by speeding up the transition. Apacon makes sure details are enhanced so that the picture is always crisp and sharp.

Sound Features

Superior sound is another vital element in high performance JVC televisions. At JVC, we have designed many sound benefits into our regular TV line. Whether you listen to the TV's own speakers, or, for stereo models, connect to a HiFi or surround sound system, all JVC TVs sound great.

Normal Sound

Hyper Surround Sound

HYPER SURROUND SOUND

A JVC exclusive feature, Hyper Surround Sound creates the impression of a 3-dimensional soundfield using the TV's front firing speakers. Hyper Surround electronically processes stereo audio signals by manipulating the phase relationships and frequency response for a fuller, richer 3-D effect. With Hyper Surround, it sounds like you are right in the middle of the action without the need for extra rear speakers.

MTS WITH dbx AND SAP

Every JVC stereo television has high performance MTS with dbx for superb stereo sound. Whether you use the TV's already superior sound system, or connect the TV to a multi-channel sound system, it is guaranteed to sound great.*

SAP (Second Audio Program) decodes any second language translation that may be part of a program.

FRONT FIRING SPEAKERS

For richer, fuller sound, all JVC TVs are designed with front firing speakers. Because the speakers are aimed directly at the viewer, a rich, clear sound stream is created that enhances both music soundtracks and dialog.

Convenience Features

At JVC one of our many goals is to make sure that every television set in our lineup is flexible in operation and customer connections are hassle free.

AV COMPU LINK EX / HOME THEATER COMPONENT SERIES

JVC's AV COMPU LINK EX lets select model televisions accept commands from select JVC receiver remote controls, making the TV the heart of the JVC home entertainment system. Simply insert a pre-recorded videotape into your AV COMPU LINK EX VCR, or a disc into the COMPU LINK EX DVD player, and the receiver will select the proper EQ settings, surround mode, and inputs — everything, even the TV, turns on automatically!**

TV SPEAKER ON / OFF IN MENU

Most JVC stereo televisions allow you to switch the TV's speakers to off when you want to listen to a multi-channel AV receiver sound system. Just as easily, you can switch the speakers back on when you just want to watch the news.

SWITCHABLE FIXED / VARIABLE AUDIO OUTPUT

Use the Fixed Audio Output if you connect the TV sound to a remote controlled AV receiver. Or, switch to the Variable Audio Output if you want to use a non-remote controlled audio system.

PLUG IN MENU

A feature of true convenience, the Plug In Menu lets you set up what will become your own default menu options. The first time you turn on your TV, the Plug In Menu prompts you to choose the language for the onscreen menus, begin the auto tuner setup so you can scan all channels, and set the clock.

AV INPUT

With a standard AV Input, every JVC TV is ready for a VCR or video game hardware. Hooking up direct video ensures your movie or video game captures the brilliant picture it's creator intended it to have. The AV input also means that your JVC television is ready for current and future sources of entertainment systems.

Standard Features

Every JVC TV comes equipped with a core package of great features.

CHANNEL GUARD and **V-CHIP** lock out "unauthorized" viewers from specific channels and entire time slots.

The **CLOCK** is the heart of all the television timer functions and puts the time a touch of a button away. New this year, **XDS AUTO CLOCK SET** makes setting the clock as easy as possible.

The **MULTI-FUNCTION TIMER** can make it seem like you're home watching TV when you're really not. Or, it can be set to remind you when a favorite program comes on or to wake you up in the morning.

The **SLEEP TIMER** will turn the TV off after a specified amount of time (up to 180 minutes) so you can fall asleep to your favorite show.

AUTO TUNER SETUP activates all of the current, active channels so you can scan sequentially without noise or video snow. The simple JVC onscreen menus allow users to easily add or delete channels manually as well.

NOISE MUTING places a placid blue screen in the space of channels receiving loud, noisy static (not available on the 13 inch TV/VCR combos).

CLOSED CAPTION DECODER w/FULL TEXT MODE decodes any captions or other text information that is included in a program such as second audio programming.

The **DISPLAY** shows the status of the TV timers and inputs with a press of the button, or, if you prefer, it can continuously display the time or channel so you always know!

JVC's **VIDEO STATUS MEMORY** lets you select the most desirable picture settings for your unique lighting so you can easily access your "Choice" with the press of a button.

TRI-LINGUAL MENUS let you choose the language, English, French or Spanish, for the onscreen menus and displays.

GAME MODE (select models) optimizes the TV's color setup best for video game play.

RETURN+ lets you return to a channel via the 10 key pad with regular return, or program a "Return Channel" to be returned to after sequentially scanning the channels (not available on the 13 inch TV/VCR combos).

Picture In Picture

JVC PIP is the finest in the industry — it's simple to use and the picture is bright as can be. Also, all our PIP model TVs have two tuners built-in to eliminate complicated and aggravating hookups. PIP is feature filled ...

Rockin' Oldies!
Exclusive!
One Time Offer!
(800) 555-1234

2-TUNER PIP

JVC's PIP has 15% more pixels than the average industry PIP and is crisp, clear, and versatile. With two tuners built right into the set, you can see two programs at once, or with another video input hooked up, a video and TV. JVC PIP also lets you SWAP the PIP program with the main program, and MOVE it to any corner of the screen.

FREEZE JVC PIP also lets you FREEZE a picture in the main screen so you can catch an important phone number, address or just a funny expression. If PIP is already activated, you can FREEZE the PIP screen.

MULTI-FUNCTION TIMER PREVIEW ... JVC PIP models utilize the PIP screen in a unique way. Combining PIP technology and our exclusive Multi-function Timer, JVC PIP models offer a Timer Preview Window. This feature provides a 7 second preview in the PIP screen just before the TV changes to the program you previously timed with the Multi-function Timer.

Technology Features

Super Command is the foundation for every JVC TV. Our menus are brightly colored with brilliant contrast to make them pleasant to look at and easy to read. Each JVC menu system is easy to operate too — directional arrows are located right below the choices so you know exactly what button to press. Utilizing the remote control's 4-way cursor command operation, all of the features of JVC's menu systems are as simple as up, down, left, and right.

15 COLOR, ICON BASED MENU AND OSD

Select models feature an advanced version of our regular Super Command menu, the 15 Color Icon Based Menu. Utilizing the same scrolling technology and 4-way cursor control, this menu system is bright and attractive making it even more pleasant to use. Also, the "helping hand", menu page title bars, and key feature icons help make it even more easy to use. We truly believe this is the nicest menu in the industry.

Universal

Universal Remote Controls

Every JVC universal remote control is preprogrammed with the IR codes for today's most popular brands of VCRs and cable boxes. The universal remote control for 2000 is contemporary in design — it looks good with stylish buttons and pleasant colors. It also fits in your hand with the most important buttons (volume, channel and menu) placed right under your thumb.

Also, in response to increased demand, all JVC remotes now come with a TV/VCR button that allows customers to seamlessly change from JVC TV to JVC VCR operation.

Unified

The NEW Unified Remote Control

Now our mono model televisions come equipped with a Super Command TV/VCR unified remote control. With this remote customers can operate the great features of the TV and the basic functions of their JVC VCR as well.

50 Series

Every JVC 50 Series television offers the same high performance technology combined with simple operation.

The 50 Series key feature is Dual Tuner PIP which simplifies connections for our customers who never have to buy extra cables and splitters to take advantage of PIP.

50 Series models also come equipped with JVC's exclusive Hyper Scan high speed channel changer, XDS Auto Clock set, a universal remote control with TV/VCR button, and our own Channel Guard and V-Chip technology to make parental control easier than ever.

Key Features

TV/VCR Combos

Whether it's for the office, the kitchen, the classroom or the kids' room, JVC's TV/VCR Combos are attractive enough to fit in anywhere. In both 13 and 20 inch sizes, all JVC combos come equipped with the most important features of a high quality TV and VCR and the quality of the JVC brandname. A standard AV input lets you hook your camcorder up right to the combo and watch your favorite home movies too!

EZJECT

Exclusively JVC, the EZJECT feature is the easiest way we could come up with to make your video rental returns simple, and maybe even more affordable. Never again will you be charged a fee for not rewinding your rental video. Press the EZJECT button and the tape automatically rewinds and ejects.

PRO-CISION 19 μ VCR TECHNOLOGY

For superior picture quality even in EP mode, 4 head 19 micron width technology helps to avoid crosstalk and boost EP picture quality to near SP levels. With Pro-cision technology, ghosts and color beats are virtually eliminated.

VCR PLUS+

VCR Plus+ technology makes recording your favorite programs as easy as looking up a number in your TV program guide. Simply find the number associated with the show, press the VCR Plus+ button, plug in the numbers and your program is set to be recorded.***

SQPB (S-VHS QUASI PLAYBACK)

SQPB allows this TV/VCR combo to play back tapes recorded in Super VHS format. Although the feature does not produce S-VHS format resolution, it does allow playback of otherwise incompatible Super VHS tapes.

SKIP SEARCH

Want to skip through the commercials of your favorite recorded program? Skip Search makes weeding out the commercials as easy as pressing a button. Each press of the Skip Search button advances your tape 30 seconds.

INDEX SEARCH

Exclusive to JVC, the Index Search feature automatically marks the tape with an index point so that you can easily cue or review to the beginning of each recorded show. Now spend your time watching the shows you recorded, not looking for them.

AUTO TRACKING

By vertically and horizontally stabilizing the picture, auto tracking automatically provides the best picture quality available from any video tape.

AUTO SP→EP TIMER RECORDING

This intelligent feature helps prevent incomplete recordings. When programmed, Auto SP→EP records in SP as long as possible, then automatically switches over to EP to ensure that your entire program fits on the tape.

VIDEO STATUS – STANDARD, CINEMA, GAME

You pick the right look and feel for the program you are watching — choose from the fine-tuned factory settings to the warmth of a cinema, to the crisp detail and graphics of a video game.
