JOEMEEK MicroMeek MQ1

- 'CurrentSense' Computer recording interface

The world's first 'real' plugin

The MicroMeek MQ1 is THE complete computer recording solution: A professional recording channel that actually fits *inside* your music computer; adding to your sound card a professional musical interface. The MicroMeek MQ1 uses JOEMEEK's unique CurrentSense pre amplifier technology, vintage optical compression and discrete MeQ (exactly as in the bigger JOEMEEK channels) to give your PC a quality recording enhancement second to none.

'The MQ1 brings professional recording quality to the desktop computer'

The MicroMeek adds functionality to your recording system; enabling you to directly connect a quality microphone or instrument and capture a full and rich professional sound. The MQ1 is packed with JOEMEEK's unique 'CurrentSense' technology pre amp... This means optimal performance from ANY microphone source of ANY impedance. Phantom power is supplied from the computer's internal power.

In addition to the quality of the input stage, the MQ1 gives you an all analogue optical JOEMEEK compressor that warms and tightens sound, and JOEMEEK's Meequalizer, adding vintage 3 band discrete EQ.
Inputs and outputs are kept neatly away on the MicroMeek's rear mounting connection board, while controls for input gain, compression and EQ are conveniently

To XLR connector
XLR breakout point
48V Phantom switch
Main outputs
AUX inputs

Rear connection board provides essential balanced/unbalanced I/O to your sound card, as well as a quality breakout XLR connector for microphone input

placed on the drive bay's front. There is an additional instrument input on the drive bay to allow those spontaneous instrument tracks in front of your computer. A stereo auxiliary input is provided so that your sound card's input can also be used for external devices when the MQ1 is switched off.

Installation is simple too - No drivers or mess. You only need one free 5.25" drive bay, and one free expansion slot for the connection board, and that's it - so simple! The MQ1 package includes the JOEMEEK resource disk, with full version software from SONIC FOUNDRY ® and demos of other titles, including Cakewalk ® 'Sonar'.

With the MQ1 and a quality sound card, you can capture professional sounds directly into your music computer… big JOEMEEK sounds with little effort.

+48V Phantom power

'CS' current sensing mic pre
