

# 1:5 Headphone Distributor

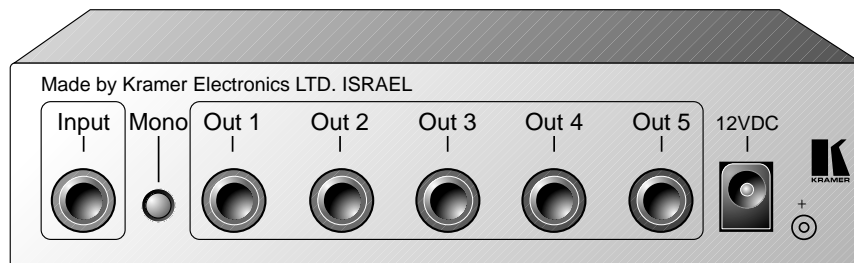

**50H**

The KRAMER **50H** is a high quality, state-of-the-art *Stereo Headphone Distribution Amplifier* designed for studios, shops, showrooms, museums and audio fieldwork.

The **50H** splits a single stereo input source into five identical outputs, each output level is individually controllable. The **50H** uses an external 12V DC power source, and therefore is suitable for field work as well. The **50H** can drive low impedance headphones or 5 stereo sets of small loudspeakers. The machine has a *Mono* switch and thus can deliver 10 identical mono outputs instead of 5 stereo outputs.

## Some features and applications:

- ❖ Audio monitoring in distribution or duplication setups, delivering undiminished quality audio signals.
- ❖ Audio showrooms, conference halls, libraries, museums and other public address applications delivering an identical stereo soundtrack to several acceptors.

## Technical Specifications:

<b>INPUTS:</b>	1 Stereo-Audio, 1Vpp/50 kΩ on 6.5-mm stereo phones socket.
<b>OUTPUTS:</b>	5 Stereo-Audio, 500mW /8 Ω on 6.5-mm stereo phones sockets.
<b>AUDIO BANDWIDTH:</b>	20 - 18,000 Hz. -3dB
<b>CONTROLS:</b>	5 stereo output level controls (front), 1 <i>Mono</i> switch (rear).
<b>T.H.D:</b>	Less than 0.5% @ 100mW.
<b>S/N RATIO:</b>	Better than 75 dB.
<b>POWER SOURCE:</b>	12VDC 100mA nom, 1 Amp Max.
<b>DIMENSIONS:</b>	16.5cmX12cmX4.5cm (W, D, H.)
