## Leviton NSI Division Introduces
"Leviton Axis Lighting Controller"™
a PC, softare based Lighting Controller

Little Neck, NY, January 28, 2004 – The "Leviton Axis Lighting Controller"™ from Leviton's NSI Division allows you to take control of your lighting through easy-to-use PC-based software. Featuring point-and–click programming of automated devices and rapid shape-based effects generation, Axis makes show production faster and easier than ever before. Axis is idealy suited for the the club environment yet also applicable to any venue where control of moving lights and other automated equipment is desired. The software is available in two versions. Basic and Pro offering identical features but fewer channels in the Basic version. The "AxisPoint" Expansion hardware when used with the Pro version allows a virtually unlimited number of devices to be controlled.

A key feature of the Axis software is its dynamic Shape Generator with advanced ShapeShift technology that allows the creation of complex light show patterns and shapes with point-and–click ease. The Axis 3D Visualizer provides a virtual viewing of shows as they are programmed and run with or without the actual fixtures being connected. For added flexibility, the Area Limits feature automatically adapts a programmed show to any size venue. The software also allows for full synchronization and playback of lighting show with audio & video files, MIDI shows, and other scheduled & sequenced events.

Axis permits real-time control of show lighting directly from a PC, affording a variety of options for creating advanced dynamic effects with the click of a single button. Convenient one-touch synchronization or inverse of all similar fixtures, control of fog

machines, strobes and other effects can be achieved with the simple click of the mouse. A unique feature, "DMX Pilot" allows organized random playback of device attributes.

Requiring only a few minutes of setup time, Axis provides everyone from novices to seasoned professionals with a range of capabilities that until now are unprecedented in PC-based software.
