

# D<sup>2</sup> Director

## RACKMOUNT MULTI-UNIT CONTROLLER

**UNPRECEDENTED CONTROL WITH POWERFUL PORTABILITY.** D<sup>2</sup> Director (pronounced "D-squared") is a single rack-mountable console featuring one oversized LCD display coupled with a revolutionary user interface. The new plug and play design allows users to easily search for music on any USB mass storage device and add songs to a single master playlist. Using this playlist, songs are automatically directed to two built-in play control surfaces, ultimately simplifying the DJ performance experience.

D<sup>2</sup> Director is complete with a ground-breaking new graphic user interface with real-time visuals of track profiles. Six soft touch buttons below the D<sup>2</sup> Director's display screen provide the DJ with control over features such as song management and hard drive management.

The D<sup>2</sup> Director includes one USB connector on the front panel and two additional USB ports on the rear panel, for a wide variety of music storage and sourcing options. This includes, but is not limited to, linking D<sup>2</sup> Director to a DJ's iPod®, USB flash drives, and external USB hard drives. Use the included computer keyboard for simplified song search. In addition, the rear panel includes line level outputs for both players. The D<sup>2</sup> Director supports MP3, Ogg Vorbis and AAC (unprotected) formats.

## FEATURES
