

HDX

HD/CD/MP3 DIGITAL TURNTABLE

THE FEEL OF VINYL WITH THE POWER OF A FULLY-LOADED HARD DRIVE. Styled after Numark's highly-successful CDX player, the new HDX is the most advanced DJ media player on the market. Incorporating an 80GB on-board hard drive (loadable via USB 2.0) and a slot load CD drive, the HDX is the perfect tool for professional and aspiring mobile DJs as well as club installers.

The HDX features an on-board Gracenote™ CD database to automatically recognize and tag audio CDs, for added convenience. Enhanced search capabilities, which can be utilized via an included keyboard, facilitate easy file location by artist, album, genre, track and even BPM.

When it comes to real scratch feel, pro DJs agree that nothing beats vinyl. And in this area, the HDX is the best in its class, featuring an ultra-high torque, motorized 12-inch platter that holds a real user-replaceable vinyl record. The HDX also records live via analog inputs and encodes the input signal directly to

the hard drive. Recording can even take place during playback—enabling DJs to record their live performances—making the HDX the only device on the market with this capability.

The HDX houses your entire music library, allowing you to travel light, and revolutionize your DJ arsenal in the process. The future of DJing is here.
