

MixMeister Studio

The power tool for mix producers.

MixMeister Studio 7 is the only digital audio application designed exclusively for high-end mix production projects. Studio gives you the ability to make nanosecond tempo adjustments, shift the key of any song, add beat loops and plug-in special effects, and much more. MixMeister's innovative visual display allows you to zoom in on individual beats and measures, and make precise adjustments until your mix sounds exactly the way you want. With MixMeister Studio, you can create commercial-quality DJ mixes, and burn them to CD or stream them over the Internet.

Make it uniquely yours. Beat-matching between songs can be automated, or you can apply precise control over lengthy and complex transitions. With countless ways to mix songs together, Studio lets you apply your own personal preferences and create music mixes that showcase your own artistic interpretation. There's even a built-in song suggestion feature which can analyze your music collection and stimulate your creativity in new directions.

Get it just right. While conventional DJ gear requires you to get everything right on one try when recording a mix, Studio lets you listen to your work, fix mistakes, and test different variations to achieve perfect results. Studio also includes powerful file management features to catalog, sort and search your entire music collection, edit ID3 tags, and print reports. MixMeister Studio is the essential creative tool for mix producers and serious music enthusiasts.

Highlights

- See an easy-to-use visual display of your beat mix.
- Enable one-click beat matching, or apply manual beat adjustments.
- Use VST audio effects to process part of a track or the entire mix.
- Change the key of a song without changing tempo.
- Get intelligent song suggestions for compatible mixing.
- Overlay samples such as sound effects and beat loops.
- Burn a flawless copy of your mix to CD.
- Webcast your mix over the Internet.
