# DIGITAL SNAKE SYSTEM

## mrc

### The "Tweak" Wireless Remote Controller

- » Nicknamed the "Tweak"
- » Dedicated wireless control panel for the mo8me
- » Allows user to access (tweak) all mix engine functions
- » Powered from 2 AAA batteries

## DESCRIPTION:

The Momentum mrc, nicknamed the "Tweak", is the wireless remote control for the DSP mix engine. The Tweak is the user interface for the mo8me. It allows the user to adjust all functions provided by the mix engine. Because of its small size and wireless function, it is a perfect controller

for a personal monitor mixer or as the mix engine for distributed audio. Each controller is programmed for a specific mo8me unit so multiple mix engines in close proximity poses no problems.
