

Revo-lutionary Solutions Steps

for **Every level of system**

Every type of room system can benefit from having the innovative Revolabs Solo wireless personal microphone systems at work. From the basic projector-on-a-stick with audio conferencing set-up, to middle of the road rooms with control and on up to the more elaborate boardroom.

(8 docking charger format)

Solo-Tabletop1
(single docking charger format)

Design rooms incorporating a Revolabs system for up to 16 live microphones.

AVAILABLE IN COMBINATIONS OF WEARABLE SOLO AND TABLETOPS FEBRUARY 2007

for **Every** application

Personal Office Conferencing

DESKTOP 1

Solo Desktop was designed for people who have a personal videoconference unit or use Skype or web conferencing via their PC. With the Solo Desktop, you get a high quality wireless personal microphone for excellent pick-up. The system does not require RF tuning since its digital and has advanced spread-spectrum transmission. There's USB and unbalanced line level outputs, plus with 8 hours talk time, it can be used throughout the most demanding meeting days.

Add-on Presenter Wireless to wired microphone system

DESKTOP 1

When you have a system that will use wired microphones for budgetary reasons, rely on a Solo Desktop to provide the roving presenter or chief meeting leader a direct wearable pick-up.

Small Executive Conference Suite

DESKTOP 2

Revolabs is aware that many of the audio and videoconference rooms only consist of 2-4 participants. With the Revolabs Desktop Unit, you can mic up to two participants using two Solo Desktop units in wearable or tabletop versions. To cover 4 participants directly with worn Solos, step-up to the Executive 4.

Small Group Collaboration Room

EXECUTIVE 4

Executive 4 pack system offers the appropriate system for the smaller rooms that need improved audio clarity, especially to help difficult acoustics, like glass and reflective surfaces or noisy room conditions. The Executive-4 allows you to mic up to 4 participants directly, while utilizing the single rack space receiver. The system also allows for expandability.

For improving a video conference codec with Solo, a summed mix through a simple mixer may effectively feed a single audio input. Please check with us for recommendations.

ALL EXAMPLES SHOWN AVAILABLE IN COMBINATIONS OF WEARABLE SOLO AND TABLETOPS

Mid-sized Group Conference Room

The original Executive 8 system will cover 8 participants directly with the wearable Solo version. Participants are no longer depended on a mic located at a distance on the table or at the ceiling. Like every Revolabs system, there's a more relaxed meeting environment, giving users security with its 128 bit encryption.

EXECUTIVE 5/8

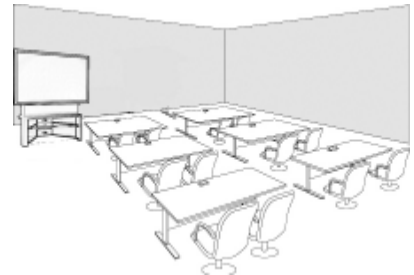

FOR A 5-8 CHANNEL SYSTEM, ORDER THE EXECUTIVE 8. POPULATE WITH NEEDED MICROPHONES

Large Group Conference Room

The perfect compliment to ClearOne or Polycom 4 and 8 channel acoustic echo cancelling processor/mixers is this set of Executive 8 and 4 Pack systems. This is the most popular number of microphones placed into mid-to-large size room.

EXECUTIVE 9/12 DUAL 4+8

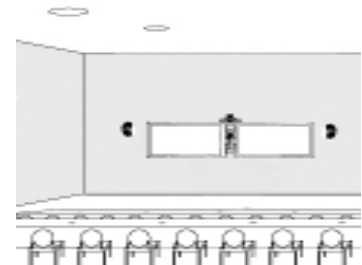

FOR A 9-12 CHANNEL SYSTEM, ORDER THE EXECUTIVE 4 & 8. POPULATE WITH NEEDED MICROPHONES

Large Group Conference Room

The top of the possibilities with two Executive 8 systems, working in tandem will cover 16 participants.

EXECUTIVE 13/16 DUAL 8

FOR A 13-16 CHANNEL SYSTEM, ORDER THE EXECUTIVE 8s. POPULATE WITH NEEDED MICROPHONES

When ordering designate the microphone combination you want in the Desktop, Executive 4 or 8. You may order an empty base and add-in the number of mics appropriate for the use. A simple synchronizing step is needed to pair the Solo mic with the base station.

Info Portal: <http://Revolabs.Starin.biz>

“On this floor, we need 2 basic conference rooms with presentation, phone conferencing and web collaboration, a small group video conference room and the executive conference room fully loaded.”

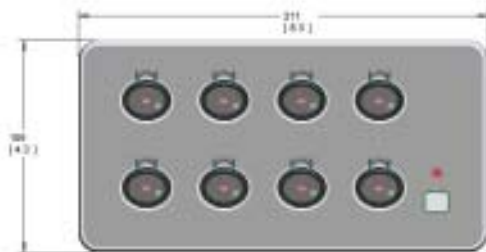

Revo it all!

for **Every** application

Audio conferencing
Distance Education
VOIP Applications
Sound Field reinforcement
IFB Systems

Videoconferencing
Telemedicine
Medical: physician's aural notes
Podcasting
Clinical observation intercom

Docking dimensions

Solo is a TRANS-CEIVER!

The sleek wearable microphone is also a receiver of any signal you feed it, from a mix-minus of in-room and distant site signals, language interpretation or even cueing of instructions.
