## **Revolabs Introduces Unmatched Audio Performance with Solo<sup>®</sup> Wireless Microphone Systems**

*Solo<sup>®</sup> Executive and Solo<sup>®</sup> Desktop to Debut at  
NSCA Expo, March 16-18 in Las Vegas*

**Maynard, MA – March 14, 2006** – Revolabs, Inc. a wireless product development company, announced today the launch of its Solo<sup>®</sup> suite of products, a secure wireless microphone system for professional conferencing and audio solutions. Debuting at the 2006 NSCA Expo taking place March 16-18 at the Las Vegas Convention Center, the Solo Executive and Solo Desktop System combine optimized voice audio quality and an innovative wireless form factor for conferencing, distance learning and other professional collaborative applications.

Unlike traditional tabletop conference microphones, the Solo system moves the microphone off the table and closer to the source to dramatically reduce extraneous ambient noises that can lower productivity in meetings. Solo also incorporates full duplex, wideband audio capability, which enables participants to move freely and naturally while in a meeting, even leaving the room and remaining engaged in the call. By easily connecting to traditional conference equipment (both video and audio), the Solo system seamlessly and securely enhances the audio of any conference call.

“Executives at corporations both large and small have long been concerned about the audio component of high-end conferencing systems,” said Martin Bodley, president and CEO of Revolabs. “Our suite of Solo products provides a breakthrough in conference audio performance and we invite systems integrators, technical consultants and business executives to hear the difference for themselves.”

The Solo Executive System can be configured with up to 24 wireless microphones in a single room, bringing tremendous productivity improvements to large meetings. The Solo Desktop system provides the same performance benefits, compact size and security to individual professionals in their own offices for VOIP and IP telephony applications.

Solo wireless microphones have eight hours of continuous talk time and rapid recharge capability. Both the Executive and Desktop systems offer single channel audio for each microphone enabling the ability to control, capture, process and transcribe high-fidelity audio from each meeting participant.

Each Solo microphone, which measure .9” x .8” x 2.6”, is clipped to an executive’s lapel allowing for a more natural posture, as well as increased mobility. Additional features include:

- Range of 30 meters
- 128-bit proprietary encryption
- Audio bandwidth of 100-8,000 Hz
- 1.5 hours charge time for up to 9 hours of talk time
- Two hours charge time

***Revolabs can be found at booth #2705 at the NSCA Expo.***

*About Revolabs*

Launched in August 2005, Revolabs is a wireless product development company committed to providing superior audio conference solutions. The privately held company has regional offices in Maynard, Massachusetts and San Diego, California. For more information, visit [www.revolabs.com](http://www.revolabs.com).
