

revolabs®

Revolabs Solo™ - Polycom Vortex® 4 and 8 Channel Flexible Audio Solutions

Installed Audio Quality without the Full Install

Bundle Benefits

PLUG & PLAY

Comes fully connected with all cabling, all microphones are paired, just connect to codec and power up. The Vortex® comes with presets that are optimized for the solo family and simple presets allow for quick install to Polycom and all other applicable audio and video codecs. **15 MINUTES!**

LOW Cost of Ownership

By pre-cabling the solo microphones and Vortex® and level adjusting the microphones, this bundle significantly reduces the total cost of adding high quality wireless microphones into all video and audio applications.

All the Benefits of the Solo Wearable Microphones and Polycom Vortex®:

- Flexible Audio
- Security
- Flexible, distributed Audio
- Echo cancellation and Noise Reduction
- Rechargeable & Long Battery Life
- Interference Free Audio

Flexible Audio, Easy to Install

Combining the award winning Revolabs Solo™ wireless encrypted microphone family with Polycom's state of the art Vortex® installed audio conferencing devices, these systems are easy to setup and provide professional quality sound with less time and configuration effort required to complete an installation.

These integrated solutions take the new **Solo Executive** 8 and 4 channel BFS systems and pre-cable them with **Polycom's Vortex®** EF2241 and EF2280 for four and eight microphone options. The Vortex® is pre-configured for the Revolabs lapel and boundary microphones and allows the user the choice of different combinations of these microphones to customize the solution for each environment. While these solutions are designed to work with all applicable video and audio systems, there are presets available for interfacing easily to Polycom's® family of audio and video conferencing systems for a simple 'plug and play' setup.

All Revolabs Solo™ products contain **MaxFlex™** technology, enabling multiple systems to be deployed within the same building or campus.
