

## The Oxford Reverb

The Oxford Reverb is a highly flexible reverberation generator, providing the user with the highest technical and sonic performance. Control over ALL parameters enables the user to creatively build a vast range of virtual spaces depending on artistic need.

*"The sonic quality is stunning. I have never heard a plug-in based on artificial reverb techniques sound as natural as this. I had the impression of sitting in the room, being able to touch the walls of wood or stone!"*  
Audio Engineer comment

## The Oxford Limiter

The Oxford Limiter is a high quality programme limiter with comprehensive metering and dithering functions including variable depth noise shaping. A unique 'Enhance' function allows volume and punch to be applied to programme material without over-loading.

Whether seeking general transparent level control, programme loudness maximisation or heavily applied artistic effects, the Oxford Limiter provides outstanding flexibility and world class performance.

*"Wow, this thing sounds amazing! Everything just comes alive and sounds so 3D."*  
Gil Gowling, Digidesign Console Sales Specialist

## The Oxford Restoration Tools

The Oxford Restoration Tools' are a bundle of three powerful plug-ins designed to give ultimate control in dealing with noisy audio tracks, whilst retaining all the characteristics and brightness of the original material.

The three plug-ins, DeClick, DeBuzz and DeNoise, encapsulate four fundamental processes in audio restoration.

The DeClick plug-in combines DeClick and DeCrackle - unlike other de-clickers, it is able to remove large pops and clicks, right through to tiny crackles, all within one plug-in.

The DeBuzz plug-in has two modes ('strong' and 'weak') to minimize signal damage and is able to automatically track any slow drift in the fundamental buzz frequency.

While the DeNoise plug-in can automatically track noise in auto mode, it can also provide traditional Noise Fingerprint capture.

*"You guys have a KILLER Noise package!"*  
User comment

## System Compatibility

# Oxford Plugins

[www.sonyplugins.com](http://www.sonyplugins.com)

Sony Oxford plug-ins take digital audio processing to a new level, offering unparalleled clarity and precision for music and post production applications. Conceived by the creators of the OXF-R3 large format digital mixing console, Sony Oxford plug-ins have rapidly become the tools of choice for the quality conscious.

The Sony Oxford R3 Digital Console

## The Oxford EQ

Based on the exact same novel processing algorithms as the OXF-R3 console, the Oxford EQ consists of a 5 Band Equaliser, with additional variable slope HP and LP filters. Four EQ characteristic types are included. A GML 8200 emulation can be added as an optional fifth EQ type (TDM only).

*"The Oxford EQ is the cornerstone of ProTools mixing"*  
Steve MacMillan (The Corrs, Toto, Seal, Cher)

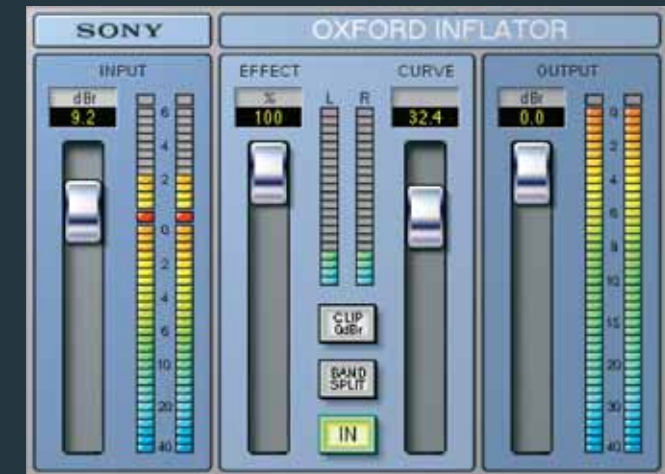

## The Oxford TransMod

A powerful new resource to accentuate or soften transient events. With a range from subtle to exceptionally dramatic effect, it can be used on individual instruments or whole mixes, without negative impact on original artistic intent. Excellent on drums.

*"...incredible! ...this plug-in is the Auto-Tune of the drum world."*  
Internet forum comment

## The Oxford Inflater

A unique real-time process that can significantly increase the apparent loudness of virtually any material without going 'over'. Brings power, warmth and presence, with tube-like character, without pumping effects associated with compressors and limiters. Enhances individual instruments or full mix.

*"The Inflater is exceptionally beautiful. It enhances a mix with warmth that far exceeds any of the other plugins I have used."*  
Internet forum comment

## The Oxford Dynamics

Modelled on the extremely flexible dynamics processor section from the OXF-R3, the Oxford Dynamics features Mono and Stereo Channel Dynamics with separately controlled sections for Compressor, Limiter, Expander, Gate, 2 Band Side-Chain EQ and 'Warmth' feature. Also includes 6 Channel Bus Compressor, for surround processing.

*"The Dynamics plugin works and performs beautifully. It is by far the best sounding, most transparent and most functional compressor/limiter plugin I have ever used!"*  
Internet forum comment
