DVD Dream® Systems Key Technology Stories

Digital Cinema Auto Calibration — Now the optimal speaker for your living room is only a press of button away. Simply place the included microphone in your listening position and allow the strength of Sony's Digital Signal Processing to take over. Speaker placement, distance, and delays are all adjusted automatically to ensure a worry free listening experience.

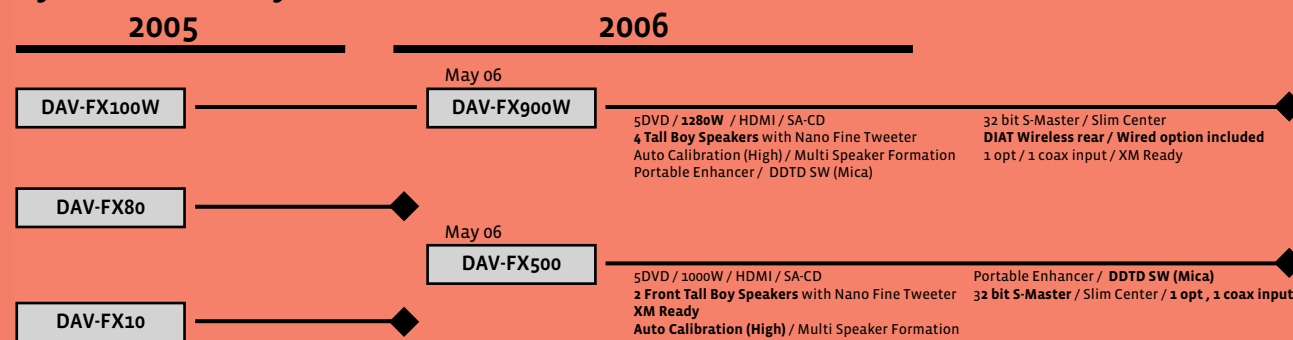

Portable Audio Enhancer — Simplified front audio connection is part of what makes Sony's HTIB systems ideal for today's portable digital music players. Beyond the simplified connection, a powerful Digital Signal Processor is used to expand the quality of compressed digital audio from any device that is connected.

HDMI™ Output with 720P/1080i upscaling of DVD Media — Reads the data on a standard DVD at 480P and maximizes the video resolution to best fit your HDMI compatible TV. This allows for you to enjoy the best in video performance while delivering digital audio over one simple connection cable.

XM Connect-and-Play™*1 — A World of digital radio is at your fingertips. Connect the optional Connect-and-Play antenna, sign up for XM service and enjoy the variety of digital radio with the superior sound quality of Sony's home theater system.

DIAT™ Wireless Rear Speakers — By using an infrared audio transmission technology developed by Sony, you can now eliminate those ugly wires that ran from the front of the room to the rear speakers. DIAT (Digital Infrared Audio Transmission) technology is not susceptible to the radio interference that other transmission technologies can be affected by. Furthermore, DIAT technology was created for the transmission of audio signals and it ensures uncompressed sound quality.

Active Interiors Key Technology Stories

S-Force® Pro Front surround sound — By using a powerful all digital Sony S-Master® Processor and DSP, Surround sound can be created from just two speakers. Unlike other "virtual surround" technologies, all of the creation of the sound comes from the front two speakers and does not need to be bounced off of side walls. No matter what the size or shape of the room or what's on the wall, it's possible to hear sounds from behind you without needing to place speakers behind you. S-Force Pro is clean, easy, and gets you into the excitement!

SONY

DVD Dream® Systems
Active Interiors

Sony® DVD Dream® Systems are perfect for customers looking for the latest audio and video technologies for exceptional performance to complement their new digital television. Sony DVD Dream® System for 2006 includes innovative features like the HDMI interface, dedicated audio input for portable digital music players and XM Connect & Play™ (requires optional XM antenna and service subscription). Sony's new Active Interior Systems are perfect for customers looking for an elegant and unobtrusive home theater solution for their living room or an all-in-one home theater system offering easy setup and very little configuration. The RHT-G2000 is a television stand with a built-in home theater sound system. It is a perfect companion to a large screen television like SXRD projection television. The TAV-L1 is an all-in-one home theater system which combines a 32 inch LCD monitor with an audio unit with integrated DVD/CD/SACD player and S-Master® digital amplifier which slides up or down to conceal or reveal the LCD monitor. Innovations only Sony can deliver.

*1. Requires subscription and antenna sold separately. Antenna placement restrictions apply.
