

Sony MDS-JE630 Sales Sheet

(Shown with optional RK-520 rack kit)

Key Features Of The Sony MDS-JE630

- **MiniDisc player/recorder.** Stereo or mono recording with 74min (148min in mono) of available time using the latest version of ATRAC DSP.
- **Pitch control.** Designed for precision changing of playback speed. The range is +12.5% to -98.5%.
- **Wide bit-stream converters.** Sony's Wide Bit Stream technology improves the sonic qualities of digital recordings. Resolution of 20-bit converters.
- **Text entry and control via computer keyboard.** A standard IBM compatible PS2 keyboard can be plugged into this unit to perform titling as well as full editing and playback.
- **Full track editing with UNDO.** Features like erasing and moving are quick and easy. Additional features include combine and divide to yield "cut and paste" style editing. Undo function allows you to undo your last edit.
- **A-B erase.** A quick easy way to delete an audio segment in one step.
- **Instant access.** Each MiniDisc can hold up to 254 tracks of information and recalled with the press of a button.
- **10-second shock memory.** Keeps the audio from glitching during record and playback. Internal CPU reads and merges audio to keep playback constant.
- **Time-shift recording.** RAM buffer captures up to 6-seconds before you press the record button to keep beginning of recording from being clipped.
- **Auto-pause play mode.** Play back stops after tack is over, unit waits in pause more at next track for user selection.
- **A/D and D/A monitoring with digital level control.** This unit can serve as a stand alone A/D and D/A converter with level control in the monitoring mode; just press REC with no Disc in the transport.
