Key Technologies

BRAVIA® Theatre Sync As a leader in products with HDMI connectivity, Sony has created BRAVIA® Theatre Sync™ technology to go beyond simple audio and video transmission. When combined with a select number of BRAVIA® LCD televisions and other Sony audio and video products, control functions will also be transmitted via the HDMI cable¹. With "One Touch Play", operations that took several steps have been reduced to one. Press the PLAY button on the remote, watch the audio and/or the video component(s) turn on, then the BRAVIA® television will turn on and switch to the correct video input.¹

DIGITAL MEDIA PORT The demand for digital audio and video content continues to be strong. The challenge: how do you integrate music in various locations into a home theater system? The answer: Sony's DIGITAL MEDIA PORT (DMP) interface. This proprietary interface adds networking and connectivity options to the home theater systems and components through optional accessories that can connect with various devices. The DMP accessory will provide the ability to control and power devices while making set up easy and operation simple to use. The DMP accessories will include a PC Client Ready device, Bluetooth® receiver and Audio Docking Stations compatible with select Network Walkman™ players and iPod® products. So regardless of where you store your music, Sony's DIGITAL MEDIA PORT offers an access point, provides control and integrates your portable music into a home theater system.

Digital Cinema Auto Calibration An ideal listening experience is only a button away. Simply place the included microphone in your listening position, push a single button and speaker position, distance and delays are automatically calibrated. Sony's Digital Signal Processing uses feedback between the microphone and receiver to optimize sound settings.

S-Master Digital Amplifier Superb accuracy using a digital-to-digital process. Clear separation of signals and balanced sound reproduction.

Portable Audio Enhancer Sony's Home Theater Systems are ideal for today's portable audio players. A powerful Digital Signal Processor expands the quality of sound from any connected audio device. Simplified front-side audio connections make it easy to play music stored on portables through the receiver.
