## ● Features

- **New MPEG Movie Mode** Allows you to capture up to 60 seconds of video and audio directly to a floppy disc, for easy and instant computer input. Use Video Mail Mode to capture 60 seconds of video/audio at 160 x 112 resolution for fast and easy downloads. Or use Presentation Mode for 15 seconds of video/audio at 320 x 240 resolution. And you can do it all without having to bother with loading special capture boards into your computer.
- **New Voice Memo Mode** Allows you to add up to 5 seconds of narration to still images. Ideal for creating presentation, documents, and personal images that speak for themselves.
- **New High Resolution Still Images** Allows you to [display](#) still images with high quality XGA resolution (1024 x 768), which offers excellent quality for printing or sending still images from your computer
- **New Precision Color Viewfinder** The 180k pixel viewfinder offers excellent viewing clarity with increased resolution.
- **New Optical SteadyShot™ System** Uses motion sensors to remove unwanted camera "shake"
- **Removable Standard 3.5" Floppy Disk** The universal storage media of choice, floppy disks are extremely easy to use and inexpensive. Now you can stop worrying about expensive and exotic storage media. For easy images on virtually any computer.
- **Universal JPEG Format** The [Digital Mavica](#) camera uses the universal JPEG format to store images on your floppy, providing you with excellent picture quality and allowing you to view your images on virtually any computer.
- **Compatiblity** Windows: Windows™ 95/98, NT™ 3.5, or higher  
Supplied MGI PhotoSuite or any MPEG 1 media player  
Macintosh Mac OS 7.6.1 or higher/Power PC Supplied MGI PhotoSuite or Quick Time 3.0
