Key Features Of The Sony MZ-B100

- **MiniDisc player/recorder.** Stereo or mono recording with 74 min. (148 min. in mono) of available time using ATRAC Type -R- audio compression. In long-play mode (stereo only), up to 320 min. of stereo recording is possible
- **MDLP Mode (MiniDisc Long Play).** Extended recording times at slightly reduced quality. 2X (LP2) or 4X (LP4) on a 80-minute MiniDisc can provide as much as 320 minutes (over 5 hours) of recording time
- **Built-in stereo microphone and speaker.** The microphone provides excellent voice reproduction. Built-in speaker is very convenient for quick playback.
- **Digital voice-activated recording (VOR).** To conserve recording time, the MZ-B50 can be set to record only when audio is present. A memory buffer is also used to prevent the audio from being cut off.
- **Selectable limiter.** A switchable limiter is built-in for automatic adjustment of recording levels. This function produces "hands-free" recordings with consistent audio level.
- **High-speed playback.** This function makes it easy to quickly review recordings
- **Editing.** Editing features make erasing one or all tracks quick and easy.
- **Quick Access.** Each MiniDisc can hold up to 255 tracks of information that can be recalled with the press of a button.
- **Disc position indicator.** Shows which position on the disc is currently being used—ideal for a quick reference of time remaining on disc.
